This week the more active side of the sun will be rotating away; solar flux levels are expected to be about the 75s, with the geomagnetic levels up to sub storm about an Ap of 35 units, declining slightly as the week goes by. F-layer day-time ionospheric MUFs in the south are expected to be about 21MHz, though sporadic E could give openings at times up to the 50MHz band. The darkness hours are expected to reach 14MHz. The northern stations could be affected by the expected high geomagnetic activity so levels could be well down for them. North/south paths will be generally the best.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Whiskey and G7 Sierra Juliet series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Charlie series. .

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast
in the 80m, 40m, 6m and 2m bands.

>months.

Good! Several of us in San Diego are also writing letters, petitioning,
jamming, etc. to shut down closed repeaters in the amateur service. We should
probably get more organized.

I said it before, but the FCC is willing to consider a "close repeater ban".
There there are several commissioners (I know one personally) that are
sympathetic to our cause. They say the request (RFR) must come from the amateur
community or politically they can not act. I have not been active on lobbying
the ARRL... attacking the coordinating bodies might be a new angle on this...

PS. My wife is a communications lawyer... What school are you going to?

BID: $SPC0531

=========
SpaceNews
=========

MONDAY MAY 31, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* DOVE STATUS *
===============
KA3AFY copied the following packet frame from DOVE-OSCAR-17 on 24-May-94:

DOVE-1>BRAMST [05/23/94 22:29:58]:
5/23/94
Software loading in progress
S-band is off
DOVE Command Team (WD0E)

At 5/25/94 0525Z DOVE controllers loaded and executed test software designed to assure the operation of the voice module after several months of dormancy. A brief test of the voice capability generated only garbled voice, so it was turned off. They are investigating possible causes, and at this point believe it is a software problem, not hardware.

For the next few days DOVE may be in various modes as controllers continue testing and/or loading new software. The S-band transmitter will remain off. Telemetry reports are not needed at this time.

[Info via Jim White]

* LUSAT-1 STATUS REPORT *
========================
Controllers report that LUSAT-1 appears healthy after experiencing an OBC software crash. The software load was performed as part of the recovery effort was intentionally stopped after the second module was loaded and turned on. The next step of the recovery will involve continuing with the satellite's deep tests.

The satellite is sending telemetry on 437.125 MHz and it's digipeater is turned on. The BBS, however, is unavailable for use since the BBS software is NOT loaded on the satellite. The BBS will not be operational for the next 3 weeks (approx.).

Those who send LUSAT-1 overseas telemetry reports (in raw format) will receive a special certificate for their collaboration. The telemetry reports must be sent via the Internet to <lu8dyf@asarin.org.ar> or via packet radio to LU8DYF @ LU8DYF.BA.ARG.SOAM or via satellite to LU8DYF @ any-active-satellite.

LUSAT controllers would like to thank LU8DYF and all the other stations who helped in the LUSAT-1 recovery, including: LU1DBC, LU1EXC, LU1FYZ, LU2BDT, LU2FHE, LU3AGY, LU4AGC, LU4FIO, LU6DYD, LU7ABF, LU7AKC, LU7DSU, LU7XAC, LU8ENU and LW1EEO.

[Info via Eduardo Sweet, LU7AKC of the LUSAT-1 recovery team]

* SpaceNews AVAILABILITY *
==========
Steve Diggs, KB4ZTN, reports that SpaceNews is now available on his "Top Of The Rock BBS" in Lilburn, Georgia, about 15 miles outside of Atlanta. Each issue of SpaceNews is received automatically from the amsat.org server via the Internet, saved as an ASCII file, named as the bulletin ID with a .TXT extension, and posted as a new upload.

The telephone number of the Top Of The Rock BBS is (404) 921-0315.

* REPORT FROM DL3HRT *
==========
Karsten Hansky, DL3HRT, reports that he is active on RS-10 and monitors the satellite especially during passes in range of North America, but hears few signals. He has worked VE2AYT and K1QPM so far. Both stations come in with good signals (559). Karsten has also worked CN8ST and has heard a TU4-station on the satellite.

DL3HRT recently made a test and heard his own downlink signals using an uplink power of just 300 milliwatts fed into a 9-element yagi. He feels this success should encourage others to try RS-10 Mode A operations.

In other news, Karsten, along with Matthias, DL3HZM, have created a satellite tracking program called "sat09may.exe" that is available via anonymous FTP at igel.physik.th-zwickau.de in the /pub subdirectory, and pilot.njin.net in the /pub/SpaceNews/software subdirectory. An older version is available from the Simtel directory at oak.oakland.edu.

2917. Field Day Rules Question

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-27 19:22:00 UTC
From: cmoore@mothra.rose.hp.com
Message-ID: <2s5h8o$a32@hpchase.rose.hp.com>
Source record: 266151

I was wondering if it is legal to have a third-party operator working a field day station? I seem to remember hearing that some club setups in public places will allow the public to make occasional contacts (under the supervision of a license amateur, of course.)

I have a friend who is a lapsed ham; his license expired many years ago. I think I might be able to inspire him to take up the hobby again if I can get him started, so I thought maybe I could invite him to come operate Field Day with me (again, under the usual supervision required for non-hams).

Finally, assuming I can do this, I noticed the rules say that for some of the classes (class B, for example, I think) you can have one or two licensed amateurs operating the station. Could I run a station with myself, another licensed ham, and this non-licensed friend and still be class B?

Thanks for your help

I have never had any trouble QSLing to either country. Sending greenstamps can sometimes guarantee that your mail wil not get through. It is intercepted right at their local post office. IRC's work well, but sending an SASE with Jordanian or Moroccan postage will usually work best. There are a few people who sell foreign postage and they advertise in DX bulletins ect. I'm sure that you can get their address from someone on the net. Also, use standard European size envelopes.

F6FNU has always been fast and 100% with 2 IRC's and an SAE. However, you must fill out the card perfectly, and not use a dual callsign QSL (husband and wife ect).

Where have all the sunspots gone?

Try running class 1C Mobile. I have run this way in the past, and usually
rack a few hundred QSO's. If you don't feel like mounting an antenna
on your car, there are some good large mag-mounts available from Lakeland
that will work. I use one on my 88 Integra, and the short hustler mast and
resonaters work fine for 20 and above. Class 1C isn't a crowded class
either...(plus, you can use the car to run to Mcdonalds on Sunday Morning
to get coffee and recharge the battery in the process).

I replaced the ones in a friend's radio. The new one's are dipped in orange
for a "nice" orange panel color. Now the radio seems to have a randomizer
connected to the "are the lights on or off" circuit. I stilll haven't
figured that one out. Oh well, it looks nice when they are on.

The following is a QST

The FCC says that some spectrum is now up for sale, but the ham
bands are not included. Also a fifteen year old from Louisville,
Kentucky has been chosen as 1994 Young Ham of The Year. Meet
Allison Zettwoch, KD4CKP on Newsline Report number 875 coming your
way right now!

(*****
FCC TO HOLD SPECTRUM AUCTIONS THIS YEAR

The radio spectrum is now officially up for sale. At least a
part of it is, according to Federal Communications Commission
Chairman Reed Hundt.
Hundt says that his regulatory agency will hold frequency
spectrum auctions this summer and fall. The frequencies up for
grabs are to be used to expand mobile communications. The FCC
Chairman says that this emerging industry has the potential to
become one of the biggest in the United States with an
estimated 87 million customers or more by the end of the century.
In a related matter, Chairman Hundt told the Washington Post
that he wants the FCC to promote competition in the communications
industry, especially for cable TV. In that way he says the agency
could eliminate rate regulation almost entirely.
At this time the auctioning of spectrum by the FCC does not
appear to hold the potential to impact on ham radio. But with the
ham bands considered a valuable commodity by many non-amateur
business interests, this is a situation that will have to be
watched carefully for the future.

(*****
2300 MHz COMMENTS

The FCC has issued a Notice of Inquiry on the reallocation of spectrum from federal government use and has designated the proceeding as ET Docket 94-32. If approved, some 50 MHz of band space would be transferred to private sector use, possibly as early as this summer.
The reallocation is called for under the Omnibus Reconciliation Act of 1993. It requires the Department of Commerce to identify 200 MHz of spectrum below 5 GHz to be reallocated within the next 15 years.
The spectrum recognized for immediate reallocation is at 2390 to 2400 MHz, 2402 to 2417 MHz, and 4660 to 4685 MHz. Amateurs share the first two ranges. The Commission said that there are a number of factors associated with existing allocations of the bands that will affect their potential for private sector use. It is specifically asking for input on whether the proposed reallocations would adversely affect amateur operations, especially amateur satellites.
The Commission says that the Department of Commerce expects that the amateur service community can satisfy the majority of its spectrum requirements in the remaining 35 MHz left after the proposed reallocation. It also believes that current use of the 13 cm band by amateur stations is light compared to use of bands lower in the spectrum, but it notes that use may increase for amateur-satellite, high-speed computer data links, amateur TV, and other wide-band applications.
The Department of Commerce says that it excluded the 2400-2402 MHz band from consideration for reallocation in order to protect existing amateur satellite operations.
The FCC has set a comment deadline is June 15th to file on ET Docket 94-32.

(*****
SLOW CODE

Slow-code, the name given to an Amateur Radio Industry Group proposal to lower the General class code speed requirement to 10 words per minute is gaining far more support than criticism in ham radio circles. Most of the packet radio postings on slow-code have praised the industry groups leadership in this area. Some even say that the proposed lowering of the code speed does not go anywhere far enough with five words per minute being suggested instead.
Hams who favor the five words per minute morse code say that this will allow some sixty to seventy thousand technician class operators, licensed prior to the Novice Enhancement action of the mid 1980's to buy high frequency radios and immediately go on the air. This is because any Tech licensed prior to Novice Enhancement as already passed the General Class theory test and a five word per minute code exam.
A five word per minute General class code speed would also do well for the sagging ham radio support industry and the nations economy. This, since it could conceivably generate an instant

sixty to one hundred million dollars in sales of transceivers, antennas and associated equipment. With the continually shrinking dollar to yen exchange ratio, slow-code might even stimulate the creation of new ham radio manufacturing plants here in the United States and create thousands of new jobs.
Slow code is also getting support from users of various public bulletin boards. An unofficial poll being conducted on America Online by Newsline is so far five to one in favor of the Amateur Radio Industry Group's Slow-Code proposal.
The Amateur Radio Industry Group has not announced any firm date as to when it plans to file its slow-code rule making request before the FCC. Nor has there yet been any reaction to this proposal from either the American Radio Relay League or the National Amateur Radio Association.

RUSSIAN MAIL THIEVES

If you have been waiting a long time for a QSL from Russia and have not received it, this might be the reason. According to Ed Kritsky, NT2X, a recent article in a Russian newspaper has announced arrest of several alleged mail thieves at Moscow's Central Post Office.
Four suspects would pick up mail at Sheremetyevo International airport near Moscow then drive their trucks to a nearby woods. There they reportedly opened the bags and rip envelopes open, seeking valuable enclosures such as foreign currencies and IRCs. The piles of torn envelopes were then dumped on the spot, as trash. The four were caught only when they became careless and started opening mail at the Post Office warehouse.
The newspaper report says that Russian Postal Service security people was helpless to combat the thievery. In fact, they pretty much missed the whole thing. So you might want to mail out another QSL in case its been over a year since you sent out the first.

YOUNG HAM OF THE YEAR 1994

Sometimes its a lot of little things in life that really pay off. If you don't believe us just ask Allison Zettwoch, KD4CKP of Louisville, Kentucky. On Thursday May 12th, -- on her fifteenth birthday -- Allison found out that she had been selected to receive the 1994 Westlink Report Young Ham of the Year Award. Newsline was listening in when Allison found out the news.

"Let's say I said to you right now, and really meant it, congratulations, Happy Birthday and you ARE the Young Ham of the Year, how would you feel?" Westlink.
"I would be very excited." Allison Zettwoch, KD4CKP.
"Well you better be excited, congratulations you're the winner!" Westlink.

"Are you serious?" Allison Zettwock, KD4CKP.
"I'm as serious as I can be. Congratulations Allison, you are the 1994 WestLink Report Young Ham of the Year." Westlink.
"Thank you!" Allison Zettwoch, KD4CKP.

Allison Zettwoch was chosen as 1994 Young Ham of the Year because of a lot of little things. She took it upon herself to become a ham after reading about the hobby in a youth magazine. Then she took out after her parents, and in short order her father Larry -- a 757 pilot for US Air was sporting the call sign KR4IF and her mother Daneen became known as KD4FNO. Only her younger brother Evan is still not hooked and Allison says she is working on him.
But Allisons recruiting efforts go well past family ties. She is credited with being the inspiration that lead to the licensing of the Zettwoch's closest friends. Their becoming hams has truly made this a multi family affair.

"There's another family here we do, that we work with, that are best friends, there's like three hams in the family. We may be on different sides of town, but we coordinate to pick up each others kids and things like that. I mean it's very useful device there, not just, you know for friends type talking, but if I'm on this side of town I'll pick up your kid if you'll pick mine up over there. Sometimes it's three o'clock you'll here the Metcalfs and the Zettwochs coordinating who is picking up who and will you feed the dog today because we didn't make it home." Larry Zettwoch explains.

According to John Embry, KR4RL who nominated her, Allison continues to be a motivating force among the young people in ham radio in and around the Louisville area. Embry says that two of the youngsters that she recruited into the hobby have become true ham radio leaders in their own right. One of them, Shannon Metcalf, KD4RER, is already serving on the board of Directors of a major Amateur Radio club.
Embry also says that Allison continues her activities of recruiting young scouts into the ranks of ham radio. At the recent South Louisville Community Festival, she actively discussed ham radio with every person with ventured by the station and display.

"We live in the south end of our city. And we have different groups like we have the Corvette Club come and we had the police there with the talking police car and everything. I set up an amateur radio station to demonstrate to the community what amateur radio is." Allison Zettwoch, KD4CKP.
"Whose idea was it?" Westlink.
"Mine!" Allison Zettwoch, KD4CKP.

In addition to all of this, Allison Zettwoch still manages to maintain a remarkable 4.0 grade point average. She is already

taking ground school instruction in anticipation of getting a private pilots license as soon as she turns 16.
KD4CKP says that she loves scuba diving and will be going to China this coming summer as a part of a special school sponsored event. And least we forget, Allison has just assumed the duty of Editor of Watts New, the official newsletter of the Amateur Radio Transmitting Society of Louisville. She says that she does all of the ham radio volunteer work because:

"I enjoy helping people get into the hobby." Allison Zettwoch, KD4CKP.

Allison Zettwoch, KD4CKP will receive her award the evening of Saturday, June the 4th at the Sea Pac convention banquet in Seaside, Oregon. On hand to make the presentation will be Westlink Report Editor - Publisher Burt Hicks, WB6MQV, Yaesu USA's Kevin Karamanos, WD6DIH and Newsline Producer Bill Pasternak, WA6ITF. It was Pasternak who created the Westlink Report Young Ham of the Year Award program back in 1986. Yaesu USA has served as corporate underwriter ever since.

(*****
GENIE TO HOME INTERNET NEWSGROUPS

Two items from the ham radio area on the General Electric Consumer Information Service better known as GEnie. First, as an experiment, the GEnie Radio and Electronics BBS will be bringing its users the radio-related Newsgroups from Internet. If you are a Genie subscriber you will soon see several new topics in categories 4, 6, 7 and 16 that are in reality the text of messages from some of the Internet Newsgroups.
GEnie says that its users will be able to send and receive messages between its posted topics and the respective newsgroups. They add that this is purely experimental at this time.

(*****
NA5E QUITS AS GENIE SYSOP

Also, effective June 1st, the Genie Radio Roundtable will be under new management. After nearly seven years as sysop, Larry Ledlow, NA5E has decided to step down to pursue a number of writing and education projects. Larry's replacement is Glen Johnson, currently sysop of the GEnie Sports Roundtable. Johnson is described as an active ham with an extensive knowledge of the GEnie system. NA5E says that he will remain on-line and will continue to visit the Radio Roundtable as time permits.

(*****
ANNE RINALDO

Anne Rinaldo, the wife of ARRL Technical Relations Manager Paul Rinaldo, W4RI has died. Mrs Rinaldo passed away at 5:45 AM Eastern time on Tuesday, May 17th after an accidental fall and

head injury that she suffered almost a week ago. A memorial service was scheduled for today, Friday, May 20th in Bryn Athyn, Pennsylvania. Other arrangements are pending. Our prayers go out to the Rinaldo family on their tragic loss.

(*****
DXAC VOTES

In DX, and by unanimous vote, the ARRL DX Advisory Committee has passed a recommendation to delete Walvis Bay and Penguin Islands from DXCC accreditation. The DXAC says that these two entities no longer meet the DXCC criteria following their turnover to Namibia by South Africa. This recommendation has been sent to the Awards Committee along with a suggested retroactive effective date of March 1, 1994.
And In another ballot, the DXAC has voted down a proposal to add additional single band awards to the DXCC program. The committee also decided against adding a 10-Meter DXCC Honor Roll being sought primarily by no-code Techs. Committee members instead expressed support for the mode-specific Honor Rolls that now exist.

CAROL PERRY RECOVERING

As regular Dayton Hamvention goers know, two of the highlights of that event are the Educators and Youth Forums hosted by New York City teacher Carole Perry, WB2MGP. Over the past several years these have become among the best attended of the Hamvention forums. But only days before Hamvention '94, Carol Perry had to inform the Hamvention planners that she would not be there because the doctor had told her that she needed immediate spinal surgery. Bob Grove, WA4YPQ of Monitoring Times Magazine and our own Bill Pasternak, WA6ITF stepped in to share duties at the Educators gathering. Former Hamvention General Chairman Noel Mc Kewon, WB8QQC picked up the reins for the standing room only Youth Forum. But the Hamvention still wanted Carol to be a part of this years festivities. So it arranged for Henry Feinberg, K2SSQ of ATT would go to Carole's home and videotape introductions to each of her sessions. A telephone line was also installed at the Hara Arena to permit Carole to listen in on the forums if she felt that she had the strength. We will let Carole tell you the rest of the story from here:

"Arrangements have been made to telephone my hospital room on Saturday at a quarter to eleven in the morning when the Youth Forum began so that I could say hello to the people and welcome them and feel as though I was part of the forum.
But unbeknownst to us at ten o'clock that morning, I had to vacate the room and the phone was disconnected. And I was discharged that morning from the hospital and a friend came to pick me up along with my daughter and pulled the car up in front

of the hospital.
By a quarter to eleven we were seated in the car, but it really bothered me that that phone call was going to be missed. And that nobody would understand why I was not there to receive it. So what I did was I borrowed my friends cellular telephone from the car and made several calls to try to get through to the arena in Dayton.
Finally I was connected to somebody that was in the forum room. At which point I expressed my regrets that I wouldn't be able to participate in the teleconference call because the obvious reasons and that I wished everybody well.
But in true ham tradition I was told to hang on the line and the next thing I know I was listening on my portable telephone to people coming in and sitting down at the forum at Dayton. Noel Mc Kewon and Bill Pasternak were there, I was able to say hi to them. My voice was evidently being projected through the PA system there so that the folks in the room who were now assembled and knew what was going on could hear me. I not only got to hear the people coming in and sitting down and wishing me well, but in addition I was given the incredible opportunity from the car right outside the hospital talking through the cellular telephone to be able to welcome the people to the forum, to thank the children for participating and for expressing my desire, that since this is the forum that is nearest and dearest to my heart, that I do all year. That everybody support the children and look to bring more youngsters to the forum next year. And to thank everybody who was involved in letting me do that.
So it was a spectacular experience for me and as I retell it to other hams, they just shake their head, because probably only hams could arrange to do something like this. I was really a super super thing and it started part of me on the right road to recovery." Carole Perry, WB2MGP.

We are glad to tell you that the surgery appears to have been a complete success. Carole is recuperating at home. Get well wishes can be sent to WB2MGP at Post Office Box 131646, Staten Island, New York 10314.

: Does anyone know if "The Rhythm of the Code" from Kawa Records (advertised in
: QST classifieds) is any good? Thanks.

: Pete Goodmann, NI9N

I ordered a copy for my wife (N0TOB) who is still a nocode. She decided she liked it so much that she bought 3 more copies, one went to the club school... Her complaint with the normal code tapes is that you do not learn the characters in alphabetic order, this tape does teach them that way. She still has not upgraded yet but knows most of the numbers and characters while only listening in the car on the 2+ miles to work.

Greetings!
I would like to know about sources for foreign postage.
Also, what is the size of the "European-size envelopes"?
And, are these readily available in the USA? Where?
Thanks for any pointers!

Dave.

: bands and the no tune broadbanded solid state rigs. Kind of a pitty not
: having to learn about diping the plate and loading the load, HI HI (oh
: sorry, you new guys don't like ham speak).

Yah, but... The Drake twins are socketed for extra xtals. Three new xtals
and you're on the air on 12, 17 and 30. I've worked a fair bit of 17
with mine and they work just fine. If you think you'll need to work
split, you'll need xtals for both transmitter and receiver but for
operating transcieve, you just need one. The receiver has space
for ten, and the transmitter 4. Many available on the used market have
already been xtalled for the WARC bands.

Again, I think it is a diservice to the new user to discount these radios
as good starter rigs.

Of course they don't have to make sense. They should make it
easier, however. I'm attacking history? I'm attacking the soul?
Well, then, you'd better tell that to the ARRL, the industries
who publish amateur radio books, the teachers who teach amateur
radio licensing classes, et cetera, because they tell me the
same things I'm posting here.

Don't go "Ahhh...this is....Ahhh...AB1CDE...and ahhhhh.....I'm ahhhhh.
in Detroit....ahhhhhh....ummmm......ahhhhh.....Michigan....and ahhhhh...
I'm ahhhhh..............."

Don't go "This is AB1CDE monitoring 146.88" You don't *need* to
say what frequency you're monitoring. To monitor means to
listen for others who wish to talk. You're not doing it for the benefeit
of the listener on a scanner. If you're not sure what freq. you're
listening in on, ask. If someone is there you'll find out. If you're
NOT sure, get new equipment or fix the broken readout on yours.

Don't say "73s" or "73's" It's "73".

Don't use Q signals on phone. Use plain english.

Those are just a few things they've told me.
Over and over again. So, if these hams, who are 60+ years old
are telling me this, and they've been around for 40 years or so,
then obviously they disagree with your ideas.

>For those who chastise using CW abbreviations on phone, let me ask: How
>would you call CQ without using a CW abbreviation? How do you talk about DX
>and DXpeditions without using CW abbreviations? For that matter, how do you
>talk about CW without using CW abbreviations? See my point?
>
I will call "CQ" on phone on a NON-REPEATER station when trying
to initiate a contact via simplex. I do NOT call CQ on a repeater.
CQ is a CW abbreviation. It's not a Q signal.

Talking about CW using CW abbreviations is fine. But, when I'm
on phone, I don't like to hear "KB8SGL, what's your home QTH?"
Ask me "Where are you located? Where do you live?" Plain English.

Listeners to the ham bands on a scanner will woner if we're
some bunch of wierdos who can't speak normally.
We're not cops. We're not military. We don't need to use
10 codes(some amateurs do this), Q codes, CW codes when speaking
phone.

>Please try to meld with the amateur radio fraternity rather than tear it down.
>You will feel better and the hams you belittle will feel better.

In other words, don't rock the boat - you might get thrown overboard.
Why, so I don't hurt the feelings of some 80 year old grandpa
who doesn't understand that you don't DO it that way anymore?

I'm a football official. Each year, every week, almost every day,
I glance at my rulebook. I read it. I read the casebook. The
official's manual. I want to know the NEW rules, the NEW applications
and how it's done NOW.

But, I get these 20+ year veteran officials who think that since
they've been around for 20+ years, they can do it their way,
use their rules, interpret it their ways, since they've been around
so long, naturally, no one will question them!

This is ludicrous. We have a method of doing things. We have a way.
It's not "Well, it's just the way it is. Don't mess with it"
It's like saying "Well, he drinks, he fights with people, and he's
always in trouble with the cops. But, don't get upset, you see,
because that's JUST the way he is. "

That line of thinking produces stagnation and promotes non-growth.

Sounds like arcing in the switches.. what do you expect for 72 cents? I work
as an electrician and I install hundreds of these switches on a near daily
basis (when working on housing projects). Of 100 switches in a case, 5 to 7
will not work at all, and the same number of switches will be 'flaky' to start
with - meaning that they won't last too long - particularily the "Decora" line
of switches (wide, flat toggles with rectangular cover plates).

As was mentioned before, some hams scan a number of different frequencies -- and the radio may have continued on to the next one before the listener has a chance to stop the scan. Announcing the frequency allows him to know which memory channel to go back to.

Some people get really uptight over the speaking habits of others -- "for ID", "73s", etc., but I don't. There are other things I'd rather spend my time on.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z MAY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 MAY AND FORECAST UP TO 30 MAY

IPS Warning 15 was issued on 26 May and is still current for
interval 29 May to 7 June.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 070/005

1B. SOLAR FORECAST
28 May 29 May 30 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 070/005

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 26 May
Learmonth 06 3211 2211
Fredericksburg 05 11
Planetary 06 14

Observed Kp for 26 May: 2344 2322

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 May 15 Quiet to unsettled.
29 May 35 Quiet to unsettled initially, then increasing to
active to minor storm levels.
30 May 35 Active to minor storm.

2C. MAGNETIC COMMENT
Recurrent disturbance expected from 29 May onwards.
3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
27 May normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 May normal normal normal
29 May normal normal-fair fair
30 May normal normal-fair fair-poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values.

Observed T index for 27 May: 25

Predicted Monthly T Index for May is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
28 May 20 Near predicted monthly values.
29 May 10 15 to 20% below predicted monthly values.
30 May 5 15 to 20% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Degraded HF comms expected from 29 onwards due to coronal
hole sourced activity.

Source record: 266092

I am interested in getting into 6 meters, however i do not know a thing about it. I am hopeing that someone will take the time to give me some information to get me started. I guess that I need some advice on what type of rig to buy, I will have to buy used I think, do to normal college student budget constraints. What do I need to look for in a rig? I have managed to find someone who is selling an Icom 551D, he wants $550 which seems a little high to me. Is that a good price? Anything else you could share will be most appreciated. I have tried to find books on 6 meters but so far no luck.

thanks
bob lauer

ARLP021 Propagation de KT7H

ZCZC AP35
QST de W1AW
Propagation Forecast Bulletin 21 ARLP021
From Tad Cook, KT7H
Seattle, WA May 27, 1994
To all radio amateurs

SB PROP ARL ARLP021
ARLP021 Propagation de KT7H

Solar flux was down this past week. From May 20 through 23 geomagnetic conditions were quiet, with the A index below ten each day, and K indices at one or zero about 25 percent of the time.

While solar flux is declining again, geomagnetic disturbances are expected to rise. Look for solar flux to drop to around 70 after the first of the month, and disturbed geomagnetic conditions caused by a recurring coronal hole to peak around May 31 and again on June 3. The high A and K values should gradually taper off, but probably won't reach normal until mid June.

We could see some disturbed conditions during the WPX CW Contest this weekend, with the A index rising to 20 or 30.

Soon we will be seeing a shift to Summer radio conditions, with higher noise levels on the low bands, increase in sporadic-E short skip propagation on higher frequencies, lower optimum frequencies for daytime propagation, and improving high frequency propagation during the evening.

Last week there was an error in the mean value given for solar flux. Instead of 89.8 it was really 91.2.

Sunspot Numbers from May 19 through 25 were 48, 35, 35, 31, 26, 22 and 12, with a mean of 29.9. 10.7 cm flux was 90.6, 89.8, 87.7, 84.6, 81, 77.9 and 74.2, with a mean of 83.7.

The path projection for this week is from Bridgeville, Delaware to the Aland Islands, OH0.

80 meters should be open from 0100 to 0230z and 40 meters from 2330 to 0500. 30 meters may be open most days from 2230 to 0100, and every day from 0330 to 0600. 20 meters should be open

most days from 1830 to 2030, and some days may open as early as
1500. Conditions do not look good at this time for frequencies
above 20 meters.

SB QST ARL ARLB048
ARLB048 Vanity plan replies

Vanity plan replies

The ARRL has filed reply comments in the FCC's proposal to institute a ''vanity'' call sign program (in PR Docket 93-305). The League said that the vast majority of the 109 comments filed on the proposal favored it, in general, with the major concerns being how to fairly administer it.

There were fewer than five comments opposing the proposal and, while they made what the League called ''thoughtful and important points,'' they did not seem to represent more than a small minority opinion.

The ARRL in its reply comments said that the issue of cost already had been settled, in that amateurs themselves would pay for the privilege of selecting a call sign.

Regarding Silent Key call signs, the League said that by giving family members and clubs the first opportunity to apply for such call signs, ''well known and respected'' amateurs' call signs could be preserved.

The League said that a proposal by Frederick O. Maia, W5YI, to establish a ''Vanity Call Sign Administration'' program in the private sector, was not only not permitted within FCC's mandate from Congress, but would be cumbersome and bureaucratic, while adding no value for the applicant.

The League urged the Commission to proceed with a Report and Order on the ''vanity'' call sign proposal, incorporating the minor modifications suggested in the earlier ARRL comments.

Seems that there's still a lot of hams with radios containing tubes (at least
in the finals); there's a newsgroup dedicated to tubes, tube-type radios,
and radio history - the articles arrive via email, maybe 20-25 per day.
If anyone would like to subscribe send an email to:

boatanchors-request@gnu.ai.mit.edu

and ask to be placed on the list. To post an article use the above address
but drop the `-request' part.

Lots of very knowledgable folks on `boats' - very enjoyable reading.

73,
Jeff NH6IL (who's first station, as WA6QIJ, was a DX-60 and an HR-10)

>"This is AB1CDE listening on 146.88"
>
>Why the hell do you need to tell me the frequency I'm listening to?

This has become quite common in areas with a lot of repeaters, and the
prevalance of rigs than can scan memory channels. You can sometimes
have a better chance of a QSO if you say the repeater/freq you're
listening on, because someone who's scanning a bunch of repeaters
knows which one to go to to talk to you.

> lnovak@cen.com

Larry, let's accenuate the positive: while HF conditions are downright crummy at the present, there are lots of newly licensed "coded" Techs and Novices who only have HF SSB priveleges on 10 meters. To them, talking to a station 1000 miles away via sporadic-E propogation must be much more exciting than the squelch tails on the local 2 meter repeater.

!!END-DATA!!

NOTE: The Effective Sunspot Number for 26 MAY 94 was 23.6.
The Full Kp Indices for 26 MAY 94 are: 2- 3- 4+ 4+ 2o 3- 2o 2o
The 3-Hr Ap Indices for 26 MAY 94 are: 6 13 33 31 8 11 8 9
Greater than 2 MeV Electron Fluence for 27 MAY is: 8.0E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. The solar disk is spotless.
No flares were observed.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet until the beginning of a recurrent
disturbance sometime on 29 May.

Event probabilities 28 may-30 may

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 28 may-30 may

A. Middle Latitudes
Active 15/30/30
Minor Storm 05/25/25
Major-Severe Storm 05/15/15

B. High Latitudes
Active 25/30/30
Minor Storm 10/25/25
Major-Severe Storm 05/15/15

HF propagation conditions were normal over all regions.
Near-normal propagation should continue on 28 May. On 29 May,
the anticipated arrival of the coronal-hole related disturbance
should degrade communications over the high and polar latitude
paths. Degradation is expected to affect the middle latitudes
as well, mostly during the local night hours. Expect reduced
MUFs, increased noise and signal instability for at least the
next week.

------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

2942. 6JS6C's available? $$?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-28 09:02:42 UTC
From: harrisok@vax.sonoma.edu
Message-ID: <1994May28.010242.1@vax.sonoma.edu>
Source record: 266193

Just out of curiosity, how tough is it to find 6JS6C tubes, anyway? I believe that I saw someone mentioned they were expensive... What are they going for now? (I can't remember the ones I last used in my FT-101B, maybe GE?) These replaced the NEC's that were in there along with the associated mods for neutralization. I would like to have a spare set handy, but right now I can only afford to be curious as to how much they are going for. :)

2943. RTTY PD software.

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-28 11:16:54 UTC
From: John@metsys.demon.co.uk
Message-ID: <770123814snz@metsys.demon.co.uk>
Source record: 266197

Can anyone suggest any NET sources of PD software, preferably with source code in 'C' for decoding of RTTY Met data, ideally using a simple interface such as the John Hoot Software Systems 741 op-amp unit or the same type of unit detailed in the JVFAX documents.

I have written a program to decode the UK Bracknell transmissions of AAXX, TTAA, SFLOC & CLIMAT in baudot met code to graphs and maps of the station locations and data for all European countries. Whilst I am using a PK232 (Pakratt) I would like to try my program out with a simple demodulator, but apart from buying SWL, I don't know know of any sources.

Any help appreciated.

John G4BSU.

2944. Need CW/RTTY IBM software for interface

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-28 11:41:55 UTC
From: SKSW80A@prodigy.com
Message-ID: <013.00778826.SKSW80A@prodigy.com>
Source record: 266198

Hi,

Thanks for looking at my post. My friend has a HAL COMMUNICATIONS CORP
CRI-100 computer RTTY/CW interface which he purchased at a ham fest. This
converts RTTY or CW sound into TTL or RS-232 signals.

His problem is that he doesn't have the computer software for
the IBM compatible PC to make it work.

My question is this: Does anyone know of anywhere on the net where
software is located which will decode/encode CW and RTTY from/to RS-232
voltages (COM PORT)? I should be able to make software like this work
with this interface given enough documentation for the program is included
with the program.

Thanks,
Jeff Johnson

On may 28'th we will interview Larry Ledlow NA5E. Larry has just returned from an assignment with the un in Croatia and Bosnia. He will clue us in on the communications scene in that troubled part of the world.

On Saturday June 4'th we will take a look at Digital Audio Broadcasting or DAB. This high-tech system of broadcasting is in the wings and should be here near the end of the century. A few systems have been proposed for dab and a standard hasn't been decided as of yet. Our guest will be Ted Schober. Ted has been on the leading edge in the world of DAB and will give us a look into the radio of the future.

On Saturday June 11'th we will take a look at vsats, (very small apachure earth terminals). Vsats are the newest high-tech method of satellite communications. Our guest will be Bill Septmeyer. Bill is an engineer and founder of National Supervisory Network (NSN). Nsn is on the cutting edge of this new communications technology. So join us on the 11'th of June when we take to the sky on Spectrum.

--
Spectrum airs live Sunday at 0200 UTC (2200 EDT Saturday) on:

WWCR, 5810 KHz, Nashville, TN (World Wide)
WIFI, 1460 AM, Florance, NJ (Philadelphia Area)
KHNC, 1360 AM, Johnstown, CO (Denver Area)
Omega Radio Network, Galaxy III, X17, 5.8 MHz WIDE audio. (Satellite)

Spectrum is rebroadcast:

Sunday at 1500 EDT, on WIFI, 1460 AM, Florance, NJ (Philadelphia Area)

Roger Bly (roger@btree.brooktree.com) wrote:
: In article <rogjdCqAB3L.9r5@netcom.com>,

: Good! Several of us in San Diego are also writing letters, petitioning,
: jamming, etc. to shut down closed repeaters in the amateur service. We should
: probably get more organized.

: I said it before, but the FCC is willing to consider a "close repeater ban".
: There there are several commissioners (I know one personally) that are
: sympathetic to our cause. They say the request (RFR) must come from the amateur
: community or politically they can not act. I have not been active on lobbying
: the ARRL... attacking the coordinating bodies might be a new angle on this...

: PS. My wife is a communications lawyer... What school are you going to?

: Roger Bly
: --

: Roger Bly
: roger@brooktree.com

I will be attending the USC Law Center this fall. BTW, hope you're
kidding about the jamming. We should all work within the law.

The idea of getting up a petition is a good one. The concept I favor is
that closed repeaters would be legal, but they would simply not be
coordinated. Therefore any time a closed or private repeater conflicted
with a repeater coordinated as open to all licensed amateurs, the latter
would have the right of way.

Southern California is ripe for reform of the 440 band coordination. It
is scandalous that it has become almost silly to bother buying a dual band
HT, as the 440 band is effectively closed to all but a few good old boys.

2947. Re: PRB-1 access and approaching city hall

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-28 14:05:00 UTC
From: rogjd@netcom.com
Message-ID: <rogjdCqIn4C.Fsn@netcom.com>
Source record: 266217

Patrick J. Rundall (rundall@rtsg.mot.com) wrote:
: I would like to get a copy of PRB-1 via anonymous FTP,
: telnet, email etc. Does anyone know where I could get
: such info (and any related documents)?

: Also, I've heard some horror stories about how hams in
: the surrounding Chicago suburbs have had to battle the
: local town-halls. Being a new home-owner, I am concerned
: about these issues. Last week I bought a house in a town
: (Lake Zurich, IL) with several (5-10) hams in my neighbourhood
: according to the CD-ROM database but none of them have
: towers. I guess they could be inactive - but NO towers in
: my part of town?? It's a little intimidating.

: From other local suburbs, I've heard hams make comments like:

: "Don't say you need a permit for a 'tower' rather 'an
: antenna support structure'. 'Tower' raises red flags
: and leads to trouble."

: "Be careful when approaching your local government - there
: have been cases where hams have asked about the existance
: of such ordinances and a week later the city council passed
: a new tower restriction that they had never considered."

: "Unless there is a DX'er in your town that happens to be a
: good lawyer with lots of time on his hands, don't bother
: putting up a tower you'll have to take down."

: "Don't ask for permission - it's easier to ask forgiveness!"

: Now I realize that this may be 50% urban folklore and 50% truth
: but comments like these are quite intimidating. Any guidance
: would be appreciated.

: I do know that when we were looking into building a house with one
: of the local builders that put up these big developments (~200
: homes) I was told "You want to put up a TV antenna - that's fine,
: but a ham antenna?".... After digging through some papers, "I'm
: sorry but we have a 'community covenant' separate from the town
: ordinances that states 'no satellite dishes, or external antenna
: allowed - period'". The manager equated ham antennas with never
: mowing the lawn, leaving broken/rusting cars in the yard and painting
: the house plaid. This is especially stupid because their big concern
: was "aesthetics" - however, at both of the developments I've been to
: by this builder there were cell-sites (~150' towers) with-in a mile
: of their little Utopia. Needless to say, I told them how dumb this

: was and walked out.

: How does PRB-1 help those that moved into one of these communities
: (this one was by Cambridge Homes - one of the largest builders in
: Chicago-land) and later decide that they'd like to become hams?
: I guess future hams are doomed to attic, tree, flagpole and rubber-
: duck antennae.

: Pat - WZ0H -

This month's CQ has an excellent article about PRB-1. You should read it straight away, as it answers most of your questions, or at least gives one point of view regarding such.

You can get a very detailed package regarding PRB-1 from the ARRL. The package includes court cases and other goodies, and is quite helpful.

Good luck.

>every 4-5 months. And I didn't even operate that often!
>

I used 6HF5's in SWAN 500. They input was about 350W in on CW and I
believe at least 500W on SSB. I tuned the transceiver in by sending
fast dots in CW to halve plate losses, and the tubes showed no
sign of deterioration over the period of 2 years and quite active
work.

I would love to have an amp with 4 6HF5 tubes. SWAN 500 was the only
rig where many more people could hear me than I could hear them. Being
often one of the first to sign on 80 m DX nets in Europe, I often
could not signal reports of weak DXs.

I compared IC-735 with SWAN 500. The Icom routinely got reports 2 S
lower! So in summary, TV tubes are great peak performers but risky
for inexperienced ones. This does not disagree with the QST.

Chris,

I read what u sed abt batteries
==========
> Chris Moore
> N6IYS
> cmoore@cancun.rose.hp.com
==========
I think you need to get a ceep cycle battery such as for trolling motors.

I have three such batteries now. (My camping trailer runs on 12 volts exclusive of the air cond.) My rule is when seeking out such a battery is if it has the word "starting" anywhere on it, I don't buy it.

But of course a plain old car battery will work in a pinch. Goodness knows that before all those D.C. batteries were available, hams used 12-V car batteries.

: -- "Get 'The Club'... Endorsed by Baby Seal poachers everywhere..."

How sad. I came to amateur radio after many years of law enforcement, CAP, and even CB. If it hadn't been for a LOT of really nice folks I might have given up or been terribly frustrated. WA9JOB, WA9POV, KA9DDN, WB9RQR, N9UBF, WI9M, and a lot of others point out when I am making a mistake or contrary to some local "custom". Now that I've been around for 6 months I sometimes disagree (and since I participate in the work parties and projects). I am proud top say that I have passed on some of what was given to me with N9VGO/AE (he took his 1st test last September), N9WHT, and a couple of others "in progress"
If we are not willing to work on our fellow hams and teach them what we expect of them - I'm SURE that the ever-expanding federal bureaucracy will find it convenient (and profitable?) to do it for us.....

| say what frequency you're monitoring. To monitor means to
| listen for others who wish to talk. You're not doing it for the benefeit
| of the listener on a scanner.

As was mentioned before, some hams scan a number of different frequencies -- and the radio may have continued on to the next one before the listener has a chance to stop the scan. Announcing the frequency allows him to know which memory channel to go back to.

Some people get really uptight over the speaking habits of others -- "for ID", "73s", etc., but I don't. There are other things I'd rather spend my time on.

Subject: need 6 meter info to get started
To: info-hams@ucsd.edu

I am interested in getting into 6 meters, however i do not know a thing about
it. I am hopeing that someone will take the time to give me some information
to get me started. I guess that I need some advice on what type of rig to buy,
I will have to buy used I think, do to normal college student budget
constraints. What do I need to look for in a rig? I have managed to find
someone who is selling an Icom 551D, he wants $550 which seems a little high to
me. Is that a good price? Anything else you could share will be most
appreciated. I have tried to find books on 6 meters but so far no luck.

Tony,
Might I suggest the Gordon West No-Code Course with diskettes? It does
a thorough job of preparation for the Novice/Tech written.
If your dad drives a fair amount I would recommend a Radio Shack
2m HT (when they are on sale at about $180), a Larson mag mount antenna,
and a gel cel powerpack, why not make him a twin-lead j-pole for indoor
use. This way he has everything he needs for portable/mobile/fixed
operation. Then introduce dad to ARES/RACES ...

>preferably digital ones....but we dont know yet.

There is commercial RF narrow-band and spread spectrum gear
capable of mega-bit per second (and greater) data rates
that can cover over 10 miles when using a beam antenna.
For the SS gear, you do not need an FCC licencse of any kind.

Thae amateur radio community will be unable to provide any
high data rate solutions. Then again, the commercial stuff
is not cheap! Expect to spend several thousand for high
data rate spread spectrum equipment that has a range greater
than a few hundred feet. For the shorter distances, it's
not that expensive compared to the cost of a contractor
or consultant doing the LAN wiring for you.

For the high-end, high $$ stuff, try...

Transformation Techniques
CLeveland, OH
216-243-9033

They have a great 5 mile 19.2KBPS SS station that accepts
serial data input and blasts it out over RF. Outs it
comes on the other side. ABout $1000.00 per seat.
Their Mega BPS stuff is several thousand per station.

Cylink
Sunnyvale, CA
408-735-5800

38.4 KBPS Spread Spectrum "modems"
1000 feet range with the stubby duck through a congested building.
30 miles line of sight with beam antennas.
All SS, so no license required. Plug and play!

Of course, there's always amateur radio packet! Study hard,
pass your test, wait 4 months for your license, spend about $1200
bucks to set up two packet stations (including power supplies, TNCs,
radios, coax and vertical antennas) and then talk to each other at
1200 baud! WOW! MyT impressive. ;-))

For only twice the cost of the amateur layout and a lot less work,
you can be on the air at 38.4KBPS with SS gear and no noise from
the FCC.

See, I knew I could turn this into another debate! ;-))

> based on the "cold cranking amps?"

What Ken Nishimura said! The deep-cycle batteries are designed for putting out a constant current for an extended time, so they _are_ rated in amp-hours. If you're going to buy a new battery specially for this purpose, the deep-cycle ones are worth the small additional price over a car battery. If you get the car batteries free (or have a used one or something), the 80 amp-hour assumption is good, but remember this is not a _deep_ cycle device, so you don't want to drain out anywhere _near_ the full 80 amps; 40 or 50 amp hours is a much safer limit.

I've been listening to Argentina on 28.9-29.0 Mhz. Sometimes the signal is very strong... about S-9 with a vertical antenna.

Also, worked a few stations on packet, on 28.18-Mhz. When I tried the 29.6-Mhz FM, the signals dropped to an S-1.

The band is openning almost every afternoon, on a North-South path. There is a chance of working the Galapagos Islands, from Los Angeles, California. From 2200-0100 UTC, for those who hasn't work them on 10-Meters.

Christmas Islands check-ins, with an S-3 signal on my multi-band vertical antenna. While mobile, from my car... worked Puerto Rico from California on 28.31-Mhz.

When the band is active, most of the people are on 20-meters on top of each other. Why not try 10-meters instead...

73,
Joe - WB6SCT

2954. Re: cycles, cycles/sec vs Hz

Newsgroup: rec.radio.amateur.misc

Source record: 266106

<2s03fp$ejj@master.cs.rose-hulman.edu>
Organization: Eskimo North (206) For-Ever

The most remarkable thing about the change to Hz was how quickly it happened in spite of near-universal opposition. I remember it quite well. Practically overnight all the magazine editors dropped kc and mc and took up Hz, followed by book publishers, various other organizations, etc, etc.

The thing that makes it so odd is that there was NOBODY clamoring for it! Until it happened, nobody gave a damn, frankly. But when it did happen, the powers that be jumped on the bandwagon and eventually the rest of us followed. A few traditionalists like me had to be dragged, kicking and screaming, but by now it's ancient history.

I am a technical writer/engineer by trade so I had to come around, but even now when I type "Hz" a little voice says "it ain't right..."

>of the listener on a scanner. If you're not sure what freq. you're
>listening in on, ask. If someone is there you'll find out. If you're
>NOT sure, get new equipment or fix the broken readout on yours.

Many of us have scanning HT's or mobiles, and we use them to monitor several repeaters at once. When driving, or otherwise unable to watch a display, the method described on the top line above helps immensely when one hears someone to whom one wishes to speak on a repeater. You see, not only "scanners" scan. Some of us have scanning *transceivers*.

By the way, I agree with your opposition to the "don't rock the boat" school of argument. When that method of argument is used, it usually means there is no real substantive reason to maintain the status quo (or at least the person wanting a steady boat is unaware of one).

2958. FCC call sign update

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-28 22:06:36 UTC
From: jerry@hnrc.tufts.edu
Message-ID: <1994May28.170636.2401@hnrc.tufts.edu>
Source record: 266204

This information used to get posted regularly, but I haven't seen it in a while. While it's available in every issue of QST, I suspect that people new to the hobby won't have yet joined ARRL and would be curious to know just what call signs have been issued. Thus, unless it's a duplicated effort, I'd be pleased to post the latest update when my QST arrives. I know what it's like to wait . . . and wait . . . and wait . . .

FCC ISSUED CALL SIGN UPDATE
The following is a list of the FCC's most recently issued call signs as of April 1.

District	Group A	Group B	Group C	Group D
	Extra	Advanced	Tech/Gen	Novice
0	AA0QT	KG0ML ++		KB0MIQ
1	AA1JB	KD1UG	N1RPQ	KB1BHC
2	AA2RR	KF2UQ	N2YKM	KB2QXV
3	AA3HM	KE3MQ	N3RUC	KB3BBG
4	AD4RD	KR4QD ++		KE4KXC
5	AB5TP	KJ5WI ++		KC5GCF
6	AC6BN	KO6AI ++		KE6GNH
7	AB7BV	KI7XI ++		KC7BTH
8	AA8ON	KG8HY ++		KB8SBS
9	AA9KM	KF9UW	N9WPG	KB9IXQ
Hawaii ++	AH6NF	WH6TE		WH6CRE
Alaska ++	AL7PP	WL7RN		WL7CHN
Virgin Islands	WP2J	KP2CC	NP2HH	WP2AHU
Puerto Rico ++	KP4WO ++			WP4MOC

++All call signs in this group have been issued in this area.

2959. Re: SSB Filters

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-28 22:39:40 UTC
From: williams@maui.qualcomm.com
Message-ID: <williams.770164780@maui>
Source record: 266209
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc

>> Does someone have any clue regarding a possible US source for these ?
>> What I'd like to find out is a 10.7003 to 10.703 Xtal Filter, with at least
>> 60 dB at 10.6997 MHz. But a 9 MHz look-alike filter (or any IF) would
>> fit also.

9 MHz crystal filters "for the experimenter" are available from:

International Radio and Computer, Inc.
3804 South U.S. #1
Fort Pierce, FL 34982

Phone (407) 489-0956, Fax (407) 464-6386.

They cost $75 each. Five models for SSB range from 1800 Hz to 2400
Hz, with shape factors of 1.6 or 1.8. They also have models for CW,
AM, and FM. This company also makes filters designed for Icom,
Kenwood, Yaesu, Heath, Drake, and Collins radios.

I have no affiliation with them, I just happen to have their latest
catalog handy since I was looking into accessory filters for my rig.

```
Archive-name: radio/ham-radio/hams-on-usenet/update
Last-modified: $Date: 94/5/28 17 02$
Version: $Revision: 1.04 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. Read the following header carefully to
access the list from ftp or email server sites. The following list *only*
contains the subset of *new* or *returning* callsigns added to the list, but
following the list will be an abreviated list of all the callsigns that are
present in the databases that can be found at the ftp or email server sites

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
```

```
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update May 28 1994
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. For fidonet addresses I have
# used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
# (note address numbers in reverse order).
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-M[-D] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987, 1992 CAN or 1993 US). ? after means
# recheck may be required (eg. Call does not match name).
#
# This list has a life of it's own, so references to *my* list will be ignored.
#

>Jim, WA6SDM

I think from Sandland's use of the terms "rfc" and "faq" he meant a
net.source, not snailmail! Surely there is a net site that has the
info.

We could try the arrl's info server. Send mail to:

info@arrl.org

With:

'send index'

in the body ...

For ARRL infoserver stuff, an up-to-date 'mirror' is kept on the Boston ARC's
anonymous FTP site on oak.oakland.edu:/pub/hamradio/arrl/infoserver

You can also check either or both index files:

/pub/hamradio/00-Index.txt and /pub/hamradio/0-Index2.txt

73,
Scott

2962. HELP! What does a 'defruiter' do?? (RADAR context).

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-28 23:26:04 UTC
From: mjr@ccu1.auckland.ac.nz
Message-ID: <2s8juc$fvm@ccu2.auckland.ac.nz>
Source record: 266211

I visited a small museum in a coastat town recently. It had many interesting exhibits, amongst which was a radar unit (from a ship I assume). It was a stand-alone unit with a circular CRT screen approx. 18 inches in diameter.

I managed to work out what most of the controls did except one marked 'defruiter'. Does anybody know what this control does?? I'd love to know (so would my colleagues). Unfortunately there were no explanatory labels on the unit saying where or when it was used. The 'defruiter' control was a knob - though could have been a rotary switch.

Any info. gratefully received.

T.I.A.
Mitchell - mj.rodda@auckland.ac.nz

2963. IPS Daily Report - 28 May 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-28 23:35:58 UTC

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z MAY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 28 MAY AND FORECAST UP TO 31 MAY

IPS Warning 15 was issued on 26 May and is current for
interval 28 May to 7 June.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 070/005

1B. SOLAR FORECAST
29 May 30 May 31 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 070/005

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled until 12UT, active
to minor storm levels thereafter.

Estimated Indices : A K Observed A Index 27 May
Learmonth 21 2122 4554
Fredericksburg 24 05
Planetary 28 06

Observed Kp for 27 May: 2212 2222

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
29 May 40 Active to minor storm.
30 May 40 Active to minor storm.
31 May 35 Active to minor storm.

2C. MAGNETIC COMMENT
disturbances expected until 7 June due to a coronal hole.
3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
28 May normal normal-fair fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 May normal-fair normal-fair poor-fair
30 May normal normal-fair fair
31 May normal normal-fair fair-poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values to 15% depressed.

Observed T index for 28 May: 15

Predicted Monthly T Index for May is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
29 May 0 15 to 20% below predicted monthly values.
30 May 15 Near predicted to 15% depressed.
31 May 15 Near predicted to 15% depressed.

4C. AUSTRALIAN REGION COMMENT
Degraded HF comms expected until 8 June due to coronal
hole sourced activity.

2964. Re: "The Rhythm of the Code" tape

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-29 00:09:27 UTC
From: "Neil D. Friedman" <ndfriedman@delphi.com>
Message-ID: <5k7M2Q-.ndfriedman@delphi.com>
Source record: 266210

Peter E. Goodmann <pegood@ss3.magec.com> writes:

>Does anyone know if "The Rhythm of the Code" from Kawa Records (advertised in
>QST classifieds) is any good? Thanks.

It was playing constantly in the Dayton Hamvention flea market area and
was completely obnoxious. It might be a decent way to learn code
(although I seriously doubt it) but to avoid domestic violence, be sure to
listen to it with headphones.

..Neil, N3DF

2966. Re: PRB-1 access and approaching city hall

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-29 02:18:48 UTC
From: jsalemi@doghouse.win.net
Message-ID: <217@doghouse.win.net>
Source record: 266226

In article <2s5694$atk@delphinium.cig.mot.com>, Patrick J. Rundall (rundall@rtsg.mot.com) writes:
>How does PRB-1 help those that moved into one of these communities
>(this one was by Cambridge Homes - one of the largest builders in
>Chicago-land) and later decide that they'd like to become hams?
>I guess future hams are doomed to attic, tree, flagpole and rubber-
>duck antennae.
>

Unfortunately, PRB-1 specifically exempts developments that prevent antennas via covenants. The FCC's opinion is that such a covenant is a private contract between the homeowner and the community, and as such is outside the scope of their authority.

However, there's a move afoot to get the FCC to strengthen PRB-1, especially after some court cases that have made it almost moot. See the article in the latest CQ magazine for more info.

2967. RF Spectrum

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-29 06:16:06 UTC
From: sullivan@finsys1
Message-ID: <CqJw2u.DI2@tigadmin.ml.com>
Source record: 266212

I was wondering if anyone might know where I could pick up a file containing a breakdown of RF bands by frequency and use for most, if not all of the radio spectrum. I've tried to find a good publication which would have this in it, but have yet to find a good one. I'd like to find raging from LF to UHF if possible.

I thought this group would be a good one to as for this information and maybe someone could point me to a good ftp site.

Thanks,

Mike

I tend to do so as well - only been licensed since March of '92. I picked it up from an old-timer here who got me interested in the hobby in the first place, and never quite lost it.

2969. HAM TRANSCEIVER TS-50S

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-29 09:38:57 UTC
From: jonathan.swan@welcom.gen.nz
Message-ID: <9405292309132187 6@welcom.gen.nz>
Source record: 266220

We're on target to upgrade our Polytech. Radio Club's ancient FT-101 with something recent ! The Kenwood TS-50S has rather caught our eye & budget, but we've not been able to get "hands on" one yet. (The main N.Z. dealer reports the set very cramped & fiddly however).
Question .... has anyone any experience with this (or similar) rig, & if so what are your opinions please !! 73 de ZL2AJZ in New Zealand

[876]

Newsline report number 876 for release on Friday May 27 1994 to follow.

The following is a QST

Newsline is in grave financial trouble and the service could disappear at any time. Also, the Roanoke Phantom is sent to prison and an appeal will be filed in the Southern California repeater user banning case. These stories and more on Newsline report number 876 coming your way right now!

(*****
NEWSLINE BROKE

This weeks top story is about Newsline itself. It comes in word from Dr. Norm Chalfin, K6PGX that Newsline is very close to being totally insolvent.
Dr. Chalfin operates the Newsline Support Fund. This is the financial support operation that pays the bills incurred by Newsline in the preparation of these weekly newscasts. According to K6PGX, there have been few contributions this spring and that spells disaster for Newsline:

"Well the situation is this. There has been fewer contributions than we have had in the past. In fact too few so that our telephone bills keep rising. While we are able to pay them at the moment, at any moment there is not enough." Dr. Norm Chalfin, K6PGX.

For those of you not aware, it costs between $750 to $1000 a month to pay the telephone, electronic mail, equipment maintenance and other expenses which make these weekly newscasts possible. Also, everyone involved in Newsline is a volunteer. There is no paid staff and when you see a Newsline reporter at a ham convention that person is paying his or her own way. Donations to Newsline pay the bills and nothing else!
Newsline does not receive any support from nor does it solicit any financial backing from any ham radio manufacturer, publisher or national society. In fact, almost since its inception Newsline has been 100% listener and staff supported. That way, nobody can ever say that a story reported on Newsline as in any way influenced by commercial sponsorship. It means that Newsline can remain 100% objective in its news coverage.
But there is the reality. With no money to operate, Newsline could disappear at any time. We cannot tell you when because we don't know ourselves. Our plan right now is to keep going until the telephone company closes us down. Once that happens, we'll have to tear down the studio do the studio and liquidate the gear to pay off whomever we can. If that happens we won't be back.
Even the revised part 97.113 does not let Newsline or any other organization -- not even your radio club -- from openly soliciting financial support on the air. But the bulletin station putting this newscast out over your repeater or high frequency station is aware of the gravity of the situation and what can be done to save Newsline. Talk to that person off the air.
Alternatively, you can write for information with a self

addressed stamped envelope to Dr. Norm Chalfin in care of Newsline at Post Office Box 463, Pasadena, CA 91102.
Also this. Its been twelve years since we were last forced to report the possibility of the demise of Newsline. Alan Kaul, W6RCL wrote the story and reported it. The circumstances were virtually the same. Those listening back then heard and understood Alan's message. Because of that, you are hearing us this week. We hope Newsline will be here next week, but as of right now, we can't promise anything.

(*****
BOCOCK SENTENCED

In other news, word that the Roanoke Phantom is in jail. Rodney E. Bocock of Roanoke, West Virginia has been sentenced to 10 months in prison and three years of supervised probation following his release from jail. He must also pay a $2000 fine. This after being convicted of being the self professed Roanoke Phantom who transmitted false air traffic control instructions. Bocock who is not a radio amateur was nailed last summer after a joint investigation that involved the FCC, the FAA, the FBI and the Allegheny County Sheriffs Department. In fact, FCC investigators from across the country were called in to assist in the investigation which is said to have involved more resources than any other in the agency's history.
He was eventually convicted in federal court of endangering the safety of an aircraft in flight, issuing mis-information to pilots, sending out false distress calls and using indecent and profane language on the aviation frequencies.
According to Richard M. Smith who heads up the FCC's Field Operations Bureau, the conviction and sentencing of Bocock should send a strong message to anyone else even thinking of committing such a crime. Don't do it says Smith unless you are ready to accept the punishment that comes with it.

(*****
NEW JERSEY FINE

A New Jersey ham has paid a fine for interfering with a New York City repeater. John Lickun, N2MVZ, of Little Falls admitted that he was the source of interference to the W2SNM repeater located in mid-town Manhattan after being located by the New York City FCC Office last July. Lickun was originally issued a Notice of Apparent Liability to Monetary Forfeiture in the amount of $1000 but that was lowered to $250 after he apologized for his jamming of the system.

(*****
SOUTHERN CALIFORNIA APPEAL

An appeal by Anthony Cardenas, WA6IGJ and Drew Feldman, N3KSO of a restraining order issued against them at the request of the

Claremont Amateur Radio Club will proceed. This is the word passed to Newsline by a friend of the two Southern California hams who says that the appeal will be based on the ground that no civil court has any jurisdiction over matters of federally licensed communications.
As previously reported, Cardenas and Feldman were told by an Orange County Superior court to not operate on the frequencies used by the Claremont repeaters and to stay away from all club members. The two were also ordered to pay both court costs and attorney fees as well.
But Cardenas has been heard on the air talking about a similar case. He and the Westlink Report newsletter say a ham named Richard Boston, call sign K6AU, was litigated back in the early 1970's by a group knows as the Westcars Net. Either by cross complaint or his own litigation Boston eventually prevailed in court. Many hams with knowledge of legal precedents coming out of California believe that the Boston versus Westcars decision may be the precedent that overturns the finding in the matter of Clara versus Cardenas and Feldman.
Newsline has attempted to contact K6AU but so far he has been unavailable for comment.

(*****
ILLINOIS BILL SUPPORTS PRB-1

House Bill 3730 has recently been introduced into the Illinois state legislature. If enacted, it would prohibit cities from enacting laws failing to conform to PRB-1. All radio amateurs in Illinois are encouraged to contact their state representatives, including Speaker of the House Michael J. Madigan. Ask them to vote yes on Illinois House Bill 3730.

AMSAT-UNITED KINGDOM COLLOQUIUM

From overseas comes word that the ninth AMSAT-UK Colloquium will be held July 28th to the 31st at the University of Surrey in Guildford, in Surrey, England. This year's meeting will be divided into four primary topic areas. These are Spacecraft Engineering, Future Space Missions, Groundstation and Spacecraft Operations and Associated Amateur Space Activities.
The Colloquium is the largest international gathering of amateur satellite enthusiasts and experts in the world. It has established a high standard of quality presentations on topics relevant to the amateur satellite community. Organizers of this year's event would welcome all contributions of program material covering the vast scope of the amateur satellite program as it exists in 1994.
Presentation abstracts should be sent to: Doug Loughmiller, G0SYX, AMSAT-UK Colloquium Programme Chairman, University of Surrey, Centre for Satellite Engineering Research, Guildford,

Surrey. The postal code is GU2 5XH in England.

(*****
PRATAS ON DXAC AGENDA

The ARRL's DX Advisory Committee has announced that the question of new country status for Pratas Island is back on the DXAC agenda. According to the League, Dr. Bolon Lin, BV5AF, of the Chinese Taipei Amateur Radio League is now in contact with the DXAC. Dr. Lin is providing answers to committee questions. A vote on the question of DXCC is expected as soon as the committee investigation is complete.

(*****
ARANT 6 METERS

And still with DX, if you were not among the tens of thousands who spent a rain soaked weekend at the 1994 Dayton Hamvention, you may have been very lucky to have been at your radio for a very special treat. This is, if you own a 6 meter radio like Ron Arant N4PHP.

"I wasn't able to go, but I got in on a 6 meter band opening that you wouldn't believe. This is one of the best openings I have ever worked." Ron Arant, N4PHP.

N4PHP says that he enjoys working 6 meters. He lives in Alabaster, Alabama not far from Birmingham. Ron did not make it to the Dayton Hamvention this year but he says that Hamvention weekend was a 6 meter bonanza for those who love the band:

"All totaled, that week I made 45 contacts, 10 of which were from my car on FM simplex. I worked stations up into Canada." Ron Arant, N4PHP.

Most of Ron's contacts were with stations well over a thousand miles away. He says that the Canadian repeater maintained a 40 over s-9 reading for well over 4 hours.

"I had a great time. Once, this lasted Sunday night, I didn't go to bed like 1:00 AM. Working all these stations." Ron Arant, N4PHP.

Ron Arant's advice to his fellow 6 meter DXers? If you can't make it to Dayton '95, turn on your 6 meter rig.

(*****
BBC RADIO 4 available in N.America

For you satellite buffs, KB2EOQ reports via packet that the United Kingdom's domestic radio station BBC RADIO FOUR can now be heard on TVRO and cable via the World Radio Network. WRN is heard 24 hours per day on ASC 1, Transponder 23 at 6.20 MHz. WRN carries numerous programmes from a variety of international

broadcasters including the BBC Radio Four.
Also, the Canadian rock video station Much Music is now back on C-Band. Much Music got lost when one of the Canadian Anik satellites got zapped by a solar flare. KB2EOQ says that Much Music is now on Spacenet 4, Transponder 20.

(*****
DO NOT MODIFY

Finally this word of warning to those of you who are listening to us on a Radio Shack HTX 202 model hand held or who owns one. Please, no matter what any other ham might tell you. No matter what you read on packet radio. No matter what might be published in a radio club or other newsletter. Please -- please do not try and perform any sort of extended frequency coverage modification to that radio. If you do, the only thing you will wind up with is a worthless piece of garbage that is totally beyond any economical repair.
The simple fact of the matter is this, it is not possible to make an HTX 202 operate out of the ham bands. This is because the folks at Tandy Corporation designed it that way. Both in hardware and in software.
Even if there were some way to get past the super narrow input filtering there is no way to make the synthesizer operate outside of the 2 meter ham band without obtaining the source code to the software that controls an HTX 202. Tandy considers that to be propriety information. They are not going to give it out to you or to anyone.
One ham recently called to Tandy to check on the validity of a modification posted on packet. He says that he was told that a number of radios have been returned to factory inoperative and with lots of the surface mount parts missing. The missing components were traced to yet another phony modification posted on the back yard fence of Amateur Radio that we hams lovingly call packet.
And no, Tandy Radio Shack will not exchange a modified radio even if its still under warrantee. In fact, any modification will completely void the warrantee and leave you holding a gray plastic box full of worthless junk.
Once again, Tandy says that there is no modification available for the HTX 202 that allows operation outside the amateur band. If you attempt one you are almost 100% guaranteed of destroying your radio.
So, if you must have a hand held that receives outside of the ham bands we suggest that you buy another brand. If you want one that offers truly superb 2 meter only performance in almost any RF environment then the HTX 202 is well worth considering.

2972. 2mtr/220 Dual Band HT ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-29 15:46:13 UTC
From: jpotts@crl.com
Message-ID: <2sadc5$sec@crl3.crl.com>
Source record: 266224

I am in the market for a 2mtr/220 dual band ht. The only radio's that
I am currently aware of that cover this range are the Standard C228A and
the new Icom IC-V21AT. I would appreciate any comments you might have
regarding these radios.

One of the questions I have about the IC-V21AT is that it seems to be
a member of the IC-W21AT family but in the latest HRO catalog it seems that
each radio in the 21AT family has its own series of battery packs and that
they may not be interchangable. Is this true ?.

2975. Outward bound DX QSL mailers?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-29 18:24:41 UTC
From: nyoung@desire.wright.edu
Message-ID: <1994May29.132441.22743@desire.wright.edu>
Source record: 266081

Many thousand years ago when I was seriously active on HF, there were always a couple people who ran outward going DX QSL services. I'd send 'em a check for a couple bucks and a package of QSLs for the DX stations I'd worked and this person would forward batches to all the DX QSL bureaus (and sometimes managers). It was cheap, quick and easy.

Do any of these poor, deluded and suffering souls still exist. I am about ready to put the HF station back together and plan on waiting out the lousy condx and working an occasional DX. I QSL those guys 100%. Hints, help (and flames, as I expect 'em) all welcome.

Most of the Truely Enlightened[tm] realize that the code test by itself
is not an adequate lid filter, but instead its the constant lowering of
requirements in general that, in an attempt to make the hobby "less
exclusionary" or the "first step in a life-long learning process", simply
lets the "Barbarians at the Gate" ruin an otherwise enjoyable hobby for
everyone.

> This is not some form of

Perhaps if we had an enforcement agency which actually did something
instead of letting the amateur bands constantly slip closer and closer to
their 27mhz counterparts.....

> perhaps the examination
> process should stress these aspects more than code speed or RF theory. It
> would also be nice if the FCC would take some action against an intentional

Since most jammers I have encountered have other psychological problems,
I doubt that even insuring that they understand what amateur radio is
"all about" will make much difference. People like this aren't
interested in amateur radio, they're interested in other things like
self-worth augmentation though "recognition" by disrupting other
people's enjoyment, no doubt subliminally thinking that since their life
is miserable, they might as well share the wealth.

But most people want strict code requirements, which didn't work to filter this lid out.. It is not a matter of making sure someone can copy @ <put favorite number here>WPM the problem is that we have people who are willing to use illegal activity to affect their desired ends. This is not some form of 'civil disobedience' afterall he is certainly not using these repeaters without permission, he is simply making it impossible to use them at all. Perhaps if the rules were set to insure that everyone understood the reasons we have amateur radio and the way it is supposed to be a service the community we have fewer closed repeaters and fewer jammers. perhaps the examination process should stress these aspects more than code speed or RF theory. It would also be nice if the FCC would take some action against an intentional jammer, especially when he repeatedly boasts about it in a public forum.

cheers,
Dan

2978. Closed Repeaters (HAM probs)

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-29 19:05:10 UTC
From: phantom@gagme.wwa.com
Message-ID: <2sap16$b35@gagme.wwa.com>
Source record: 266225

Well sometimes it might be nice to have a closed machine, yet it can
be annoying. Personally I talk on a machine that is open yet it is closed.

Now if you ask me how is that possible I say the system requires
that you have an MDC radio. This is normally found in the Motorola nitch.
However, there are after market products available to make the Japanese radios
do MDC 1200. However, if somebody is on the machine with teh data burst simularto that of
police radios you can talk on the machine. The TOT is set for
about four minutes after that time if it had not heard teh MDC it will just
it will just ignore you. The philosophy(SP) BEHIND THIS IS THAT THE mdc 1200
IS A UNIT IDENTIFIER, it has all the information on a computer attached to
machine that records when you keyed up for how long and how often.
The computer then has your name, address, call, and class of license.
Now to become a registered user all you have to do is talk to the owner of the
machine and he will get you set up on the computer. I find tis system to
be very good. It keeps down on the Kerchunking. However, I have the MDC
and the end of my transmision therefore I have to kerchunk to talk. But
that is OK with this sytem and how it is run.

Over all this aslo gives the operator(owner) the option to
discontinue any person that he sees fit. So far it seems that he as NEVER
done this, however if a user becomes abusive he wqill terminate them.

[[EXAMNT6.01 : 3903 in EXAMNT6.01]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC considers their
processing time to be 90 days--from the date they receive the
application. The FCC usually receives the application one
to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will not receive a new license from the FCC.
The existing Technician license plus the CSCE conveying the Morse
code test credit is the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming six to eight week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to

MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1994 test fee is $5.75.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1994 test fee is $5.75.

2980. US License Examination Opportunities Schedule 6/1/94 to 9/12/94

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-29 19:14:00 UTC
From: "Jahnke, Bart" <bjahnke@arrl.org>
Message-ID: <2DECDEC4@arrl.org>
Source record: 265816
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541

The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;

(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121

(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;

205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;

704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;

708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;

818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;

808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;

(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;

414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,

301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;

408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;

919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,

Knoxville, TN 37912-2500; 615-688-7771.

The 1994 test fee is $5.75.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443

The 1994 test fee is $5.75.

The 3-Hr Ap Indices for 27 MAY 94 are: 9 7 4 6 8 9 6 6
Greater than 2 MeV Electron Fluence for 28 MAY is: 2.5E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. The solar disk is spotless.
No events were observed.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet until about 28/1000Z when
the field gradually became disturbed. Unsettled to storm

conditions were observed thereafter. Major storm conditions occurred at most stations from 28/1500-1800Z. This is thought to be the beginning of a recurrent disturbance associated with a coronal hole.

Geophysical activity forecast: the geomagnetic field is expected to be at active to storm conditions for the three day forecast period. Major to severe storm periods are possible during local nighttime.

Event probabilities 29 may-31 may

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 29 may-31 may

A. Middle Latitudes
Active 20/20/20
Minor Storm 30/30/30
Major-Severe Storm 25/25/25

B. High Latitudes
Active 15/15/15
Minor Storm 30/30/30
Major-Severe Storm 35/35/35

HF propagation conditions were normal over all regions until about 15:00 UTC when enhanced levels of geomagnetic and auroral activity began to affect high and upper-middle latitude propagation. Conditions have not yet had a significant impact on propagation through these regions. However, that is expected to change during the local night hours when propagation could become more seriously degraded, particularly for transauroral paths. As the activity matures over the next couple of days, longer-lasting periods of signal degradation are expected. Propagation may be worst on 30 or 31 May during the anticipated peak of activity.

-- -- -- -- -- -- -- -- --- ------
Uncorrellated: 0 0 0 0 0 0 0 0 000 (0.0)

Total Events: 000 optical and x-ray.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event

Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

SB DX @ ALLBBS $OPDX.160
Ohio/Penn DX Bulletin No. 160

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 160
BID: $OPDX.160
May 30, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, 4X/OK1FGC, HH9HH, DF4RD, DL7VEE & DXNL, NA2M, K4CEF & Southeastern Cluster Group, W5HVV, KD8V and NE8Z for the following DX information.

5A, LIBYA. There are reports of a planned operation in Libya by a group of Japanese amateurs led by Ajiro, JA2JPA. No offical date has been set (but a June 10th window was mentioned), but equipment has been shipped to Libya and the QSL cards are already printed. The planned operation has a United Nations agency sponsorship. There was an oral permission to operate but the operation will not take place until the written authorization is received. KYFC! Meanwhile, a pirate has been operating as 5A/JA1MAO. Don't waste your time, JA1MAO is home in Japan.

A5, BHUTAN. According to Rod (W5HVV), Jim Smith's trip to A5 is still in the making. Rod spoke with Jim on May 23rd and his comments were that he has an excellent relationship with the Bhutanese communications services and was awaiting a reply from them very soon regarding a license for operation in Bhutan. He is not sure if the callsign will be A51JS, which he used on his last trip, or if they will assign him a new call. Jim will pass along his latest plans via INDEXA and the bulletins as soon as his plans firm up and he has a date for the trip.

EU, EGYPT. In Cairo, Pavel, OK2FUN, (member of the Czech Embassy) was able to obtain an official Egyptian licence (which is rare for foreign visitors) with the callsign SU1KR just for the CQ WW WPX CW Contest this past weekend. QSL via OK2EC. Pavel's length of stay is unknown at this time, but it was reported he will be using SU1/OK2FUN (also SU1STAR). He will be active on all bands, excluding 160 meters. His 160 meters antenna is not operational as of yet.

H4, SOLOMON ISLANDS. Mako, JA1OEM, is active as H44/JA1OEM and will be going QRT June 10th. Be looking for Mako on 30 and 40 meters CW (send very SLOW) between 1030 and 1430z or 0715 and 0900z. He has also been

heard on 3788/3798 kHz SSB around 1300 to 1345z.

HL, SOUTH KOREA. Harry, HL9HH/KJ6YR, informs OPDX that he will be looking for the next two weeks for the following states on 40 and 80 meters for his WAS (Worked All States) award:
40 meters - IN, MS, NM, ND, SD, and NE on 7002 or 7009 kHz
80 meters - IN, WI, MS, IA, ND, SD, and NE on 3502 or 3509 kHz
His operating hours will be 1030 to 1200z every day and he will alternate between the two bands giving priority to 80 meters. Harry states that anything above 25 kHz on these bands is heavily occupied by JA phone operators. Also, Harry says to PLEASE be patient because the noise level at his QTH is "VERY HIGH." Harry states he will move his interest to the East Coast in late summer. To arrange for a sked with Harry, send E-Mail to his InterNet address (hherr@emh.osan.af.mil) QSL to Harry HL9HH, PSC 3 Box 3695, APO AP 96266-3695 (new zip code).

JY, JORDON. Now until June 27th, five English and one Germany operator will be active from JY-land. Activity will be mainly on 6 meters, but the group will have HF equipment with them. Listen for JY8ED/G3SED, JY8JH/G0JHC, JY8IC/GJ4ICD, JY8OX/G3KOX, JY8VA/DL7AV and JY8ZC/G4CCZ. QSL to their home callbook address.

PACIFIC DXPEDITIONS. Yarl, SM6FJY, who is currently in Angola until June 5th, will be active from the Mariana Islands (KH0), June 13-26th. >From June 27th to July 10th, Yarl will be active from Guam (KH2). From July 11-24th, Yarl be in Belau (KC6). After the Belau operation, Yarl will return to Angola and will stay there until August 18th.

UPCOMING ISLAND ACTIVITY. Dr. Rick Dorsch will be active this summer from various islands. All activity will be on the following: CW - 5 or 25 kHz up from band edge. SSB - 14260, 21260 and 28460 kHz. QSL via K8LJG. He will be operating from the following islands:
June 18-25 NA-110 (Hilton Head Island, SC) signing NE8Z/1C0 and/or NE8Z/4.
June 23/24 NA-058 (Georgia State Island group) signing NE8Z/1G0 and/or NE8Z/4.
Jun/Jul/Aug Various Canadian Islands in Ontario for the Canadian Islands Award (Dates unknown). Signing NE8Z/XK3/M and NE8Z/VE3/M. Using a 1kw + TA33 on the car!
Mid-July NA-139 (Maryland State East Island Group) signing NE8Z/1M3 and/or NE8Z/3.
Mid-July NA-140 (Maryland State West Island Group) signing NE8Z/1M3 and/or NE8Z/3.

YA, AFGHANISTAN. Right after OPDX went to print last week a station signing YA/RW6AC was reported on 14226 DX net on May 22 at 2345z. There were no other reports during the rest of week, but it has been indicated that this station will be there through the first week of June.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

The "Home Amateur Mechanics" magazine source has always seemed the most logical. My old elmer, Cliff Trischler (W4IO, now SK), had several copies of the old periodical. The magazine had several columns, "HAM Aviation" among "HAM Radio," among others.

Ah yes, the `new blood' that will save the hobby. They practice jamming when
they don't get their way, then brag about it. What a filthy disgrace.

>: There there are several FCC commissioners (I know one personally) that are
>: sympathetic to our cause.

And does this FCC commissioner that you personally know also know that you
are a jammer? I doubt he would be very sympathetic, and would surely distance
himself from you if he found out.

>: PS. My wife is a communications lawyer.

And has your communications lawyer wife counselled you concerning your jamming
activities? If she knows you're jamming and condones it then she's a lawyer
of the lowest class.

The newspapers would have a field day if you get caught: ``Husband of
communications lawyer gets arrested for intentional radio jamming.''
That would do wonders for her career.

>: Roger Bly
>: roger@brooktree.com

For those who are interested, he's KA6MWT

Someone send this guy either a copy of Part 97 or a CB radio. His article
has perfectly explained the need for closed repeaters.

: Over 90 percent of repeaters in Southern Cal are closed to virtually all
: hams, and this IS unwholesome. Eventually we will do something about it,
: however.

I agree with AB6WR, something does need to be done about this. I visited SoCal recently and could only get one ham to talk to me on a 2m/70cm repeater the entire time I was in L.A.

This compared to an area where only one 2m repeater has a subaudible tone on it due to the pagers on the same mountain. And it can be shut off with a simple 0* command and turned back on with a 1*. Most of the 440 machines has subaudible tones in the Denver metro area out of necessity from interferance, also, but none of the machines are truly "closed" to other hams.

Southern California has taken the hobby out of ham radio and turned 2m into a ham-commercial band. Sad.

Good point, Dan (except for the code part ;). Maybe we should petition
the FCC to include a psychological exam in addition to the code and theory
tests; that might help weed out the potential trouble makers who would
consider jamming to show their displeasure.

What's the current fine for intentional jamming? $10,000?

Who is it that keeps claiming that VHF/UHF is healthy in So. Cal?

Sure glad we don't regularly have these problems down on HF CW.

A defruiter removes non-interrogated transponder responses from a
radar display.

The problem with the 1030/1090 MHz IFF system is that all transponders
reply on the same frequency. The raw received signal, when viewed on
a PPI (Plan Position Indicator) scope is cluttered with false responses,
transponders replying to other interrogations. In radar jargon, this
is "fruit". They would have called it "clutter", but that term was
already used for extraneous ground returns on the primary radar.

The defruiter simply delays the received transponder video for one
pulse repetition period and then does an exclusive-or function between
it and the currently received signal. A properly interrogated return
will correlate from pulse to pulse and be allowed to pass. A non-
interrogated signal will appear in a different time slot for each
interrogation and will be rejected. The result is a nice clean display
with just "your" transponder video. Of course, using the defruiter
requires a better S/N ratio than the raw video, so both are available
on the console and either can be selected depending on conditions.

Another tidbit gleaned from hanging around FAA radars in the wee
morning hours of a previous life.

The FCC, in a recent letter, stated that repeater trustees have always
had the right to exclude people from using their machines.

Therefore, one can conclude that there is no such thing as an "open"
or "closed" repeater; that in fact all repeaters are "closed", you are
operating there as a guest of the repeater trustee, and if the trustee
doesn't like your operating practices, accent, ethnic background, or
anything else, s/he can tell you to get off and stay off his/her
repeater.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 29/2330Z MAY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 29 MAY AND FORECAST UP TO 1 JUNE

IPS Warning 15 was issued on 26 May and is still current for
interval 28 May to 7 June.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 069/003

1B. SOLAR FORECAST
30 May 31 May 01 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 070/005

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 28 May
Learmonth 29 4444 4544
Fredericksburg 35 21
Planetary 42 25

Observed Kp for 28 May: 1113 4554

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
30 May 40 Active to minor storm.
31 May 35 Active to minor storm.
01 Jun 35 Active to minor storm.

2C. MAGNETIC COMMENT
disturbances expected until 7 June due to a coronal hole.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
29 May normal normal-fair poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
30 May normal normal-fair poor-fair
31 May normal normal-fair poor-fair
01 Jun normal normal-fair fair-poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were 15 to 20% below predicted monthly values.

Observed T index for 29 May: 10

Predicted Monthly T Index for May is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
30 May 15 Near predicted to 15% depressed.
31 May 15 Near predicted to 15% depressed.
01 Jun 15 Near predicted to 15% depressed.

4C. AUSTRALIAN REGION COMMENT
Degraded HF comms expected until 8 June due to coronal
hole sourced activity.

I'm sure you're were joking about the ethnic part, and you forgot the :-)
No problem kicking off a bad or annoying operator, but I don't think the
FCC would permit a trustee to exclude hams of a specific ethnic group
or race. Something about the radio spectrum being a public resource
and laws on discrimination based on race, and such. Even if the
trustee's callsign was xx4KKK :-)

^^^^^^^

Wait a minute! Now I remember this guy. Recall back in December he posted
an article stating how easy it is to operate in Southern California
without a license, and how he bragged he had done that for years?

And he has the gall to use the subject line: `Ham Radio - few problems'.
I guess one never sees oneself as a problem.

In December someone on here chastised me for calling him a criminal and
saying `once a criminal always a criminal'; now he's jamming closed repeaters.

Sigh.

Back to HF CW where everyone's licensed and there's no jamming.

I'm the guy, Jeff: AB6WR..... name is Roger. (Not the same Roger who referred to jamming earlier in this thread!)

I can assure you that in Southern California we take as dim a view of jammers as is done anywhere else. Fortunately, the problem is manageable and the jammers are reasonably few. T-hunting is big in our area, and often if a jammer gets too out of hand he gets tracked down and identified. These creeps tend to lose their enthusiasm for jamming when they know that others know who they are.

2997. ANARTS WW RTTY Contest Rules

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-30 02:57:20 UTC
From: dgodden@arthur.st.nepean.uws.edu.au
Message-ID: <dgodden.770266589@lancelot.st.nepean.uws.edu.au>
Source record: 266105
Cross-posted to: aus.radio,rec.radio.amateur.misc

ANARTS
11th-12th JUNE. 1994.
WW RTTY CONTEST
Australian National Amateur
Radio Teleprinter Society.
RULES P.O. Box 860, CROWS NEST, NSW 2065.
==========

These Rules do not change the previous rules of this Contest published early 1994, but are intended to remind all interested persons world-wide that ANARTS Contest time is now fast approaching.

TEST PERIOD: Contest takes place on the second full week-end of June in each year. Contests start 0000 UTC Saturday and end 0000 UTC Monday. The 1994 contest is to be held 11-12th June.

Not more than 30 hours of operating is permitted for Single Op. Stations Non operating periods can be taken at any time during the contest.

Multi Op. Stations may operate the entire contest period.

Summary of operating times must be submitted with each contest log.

BANDS: Use Amateur bands 80, 40, 20, 15 and 10 metres.

MODES: All digital modes permitted (RTTY,AMTOR,FEC,PKT,PACTOR)
NOTE: No satellite operation permitted.

CLASSIFICATIONS: (A) SINGLE OPERATOR (One transmitter)

(B) MULTI-OPERATOR (One transmitter)

(C) SWLs

MESSAGES: To consist of RST, TIME (UTC), and (CQ) ZONE.

SCORING: For each band used - As per Exchange Points Table to obtain QSO Points.
Count Countries worked (see definition)

Total all bands used to obtain (1) Total QSO Points.
(2) Total Countries.

World stations calculate "VK BONUS" which is 100 points for each VK worked on 14MHz; 200 points for each VK worked on 21MHz; 300 points for each VK worked on 28Mhz; 400 points for each VK worked on 7MHz and 500 points for each VK worked on 3.5MHz.

CLAIMED SCORE for WORLD STATIONS is calculated by multiplying (1) TOTAL QSO POINTS by (2) TOTAL COUNTRIES then that total by (3) the NUMBER OF CONTINENTS WORKED during the contest.(Note that each continent counts once only to a maximum of 6). To the total obtained ADD the "VK BONUS" to show GRAND TOTAL CLAIMED SCORE.

Example for World Station: 720 points from zone chart (1) X by 29 countries (2) X 5 continents (3) = 104,400 points, plus (+) 6 VK stations worked on 14MHz (that is 600 points) giving a grand total of 105,000 points.

CLAIMED SCORE for AUSTRALIAN STATIONS (VK1-VK8) is calculated by multipying (1) TOTAL QSO POINTS by (2) TOTAL COUNTRIES and then that total by (3) the NUMBER OF CONTINENTS WORKED during the contest with a maximum of six as stated above. This calculation gives the GRAND TOTAL CLAIMED SCORE.

In all cases, a station may only be worked once per band, but may be worked on other bands for QSO points and multipliers.

COUNTRIES: The country count is as per ARRL DXCC list of countries, except that Australia (Areas 1-8), Canada, Japan, and U.S.A. mainland do not count as separate countries. HOWEVER, each call area VK1-VK8, and each call area in Canada, Japan and mainland U.S.A. DO COUNT AS SEPARATE COUNTRIES.
Contact with ones own country does count for QSO points but does NOT COUNT AS A MULTIPLIER. (NOTE that call areas VK1-8, and in Canada, Japan and USA mainland count as countries).

LOGS: Logs must show in this order:
1. DATE
2. TIME (UTC)
3. CALLSIGN OF STATION WORKED/HEARD
4. MESSAGE INFORMATION SENT/RECEIVED (RST/TIME/ZONE)
5. POINTS CLAIMED.

SUMMARY REPORT: Summary sheet must show: Callsign of station, name and address of operator, bands used (a separate log is required for each band), the points claimed for each band, the number of countries worked on each band, the number of continents worked; and details of VK BONUS calculations for world stations. A summary of the calculations made to obtain the GRAND TOTAL CLAIMED SCORE as per the "Scoring" section will assist checking. The general certification regarding compliance with rules and signature of operator is also required.

Multi-op logs must contain signatures and callsigns of each operator.

AWARDS: Plaques will be awarded for first place in each Classification. Certificates will be given to 1st, 2nd, 3rd places in World and also on a country basis (see above). The judges decisions will be final and no

correspondence will be entered into. Logs become the property of ANARTS

CLOSING DATE: Logs must be received by the Contest Manager, A.N.A.R.T.S
P.O. Box 93, TOONGABBIE, NSW 2146, AUSTRALIA, by 1st September of
the year of the contest.

No, I'm not joking. When the FCC was asked for input into this CA
case of a trustee throwing two people off his repeater, the FCC wrote
a letter which indicated that repeater trustees have always has the
right to control who does and who does not operate their station.
When you are using a repeater, you are operating another ham's
station. The letter did not indicate, from my recollection, that
the repeater trustee has to show just cause in order to throw someone
off his/her repeater.

Therefore, while perhaps stupid, a repeater trustee could use ethnic
origin to dismiss a user from his/her repeater. Until, at least, the
person being discriminated against sued him and/or the FCC; although
I would think that it would have to be the FCC that would have to
issue a "stop discriminating" order...

Of course, I'm sure the repeater trustee would claim it had nothing
to do with race, blah, blah, but was the user's operating habits, etc.
Then prove otherwise.

Dumb, yes, but not impossible.

In a recent conversation with a fellow ham out in CA, KD1NR, a
fellow ham in this area, exchanged information regarding how we have
caught a jammer with hard evidence and nobody will do anything about
it. Apparently, from his conversation, it would appear that similar
incidents occur on a regular basis out in CA, with even professional
RF folks at NASA doing jammer hunting with $100k+ equipment, only to
bag people and have nothing done at all about it.

Perhaps your glasses are a little too rose colored, Roger?

Of over 350 pairs listed in So.Cal. in last years ARRL Repeater Guide, there were only 32 open repeaters. What a waste of frequency. The only open repeater I have been able to find that I can reach is on 446.650. Sometimes I wonder why I have a dual band.

Agreed. The 440 situation in Southern California is rediculous. I'm curious, how would hams feel about restricting closed repeaters to certain segments of each band? I hate to see new rules having to be made, but something's wrong when whole bands turn into private cliques. I don't believe that this was ever the intention of part 97. Thoughts?

>>> fit also.

I think we have some 8 pole crystal filters in the 10.7 Mhz range. They
probably are 7.5Khz wide. We have the exact specs. We would probably sell
them to hams for $10.00 each.

If interested please send me your fax number and I will fax the information.

I know 4khz filters at 10.7 Mhz were used in some Uniden SSB CB rigs.
They were quite good. You could put two in series. I think spare parts prices
were in the $25.00 dollar range.

>anything else, s/he can tell you to get off and stay off his/her
>repeater.

Wait wait wait.... I have a question then.... Are you saying that a
frequency can be owned because someone has a sanctioned repeater on
it?

My understanding is slightly different, so please correct me if I'm
wrong. I thought that no one could own a frequency. My understanding
of the above FCC statement is that a repeater owner/trustee doesn't
have to let you use a repeater does not imply that they can tell you
that you can't use the frequency. Certainly they are not obligated
to tell you the telemetry commands, nor are they required to repeat
your signal. But I didn't think they could tell you to get off the
frequency.

Now maybe my attitude goes against some ARRL band plan suggestions,
but otherwise, if your not being offensive, or causing malicious
interference, I don't understand how a repeater can be completely
closed and unusable by any other ham. Is there anything in part 97
about this issue?

tnx & 73,

: was ever the intention of part 97. Thoughts?

In Southern California the closed and private repeaters are using one third of the 420 - 450 UHF amateur band. The commission has always ruled in favor of closed repeaters. You may wish to reread part97 as it relates to control of automatic stations in the auxiliary or repeater service.

I understand that open repeaters in southern california are now using the local courts to issue injunctions limiting access to their repeaters.

Amateur stations in the digital modes are now having to operate under stricter regulations and may soon require you to authenticate your station before they allow you to use their networks. I bet you never thought packet would be closed.

Private cliques are not limited to 440, just the other evening I was able to hear several on 75 meters. Those guys seem to tie up the frequencies over several continents.

Here in the San Francisco Bay Area the open repeaters occupy half the 440 - 450 sub band and you will notice most of the activity is on the closed repeaters. Join a club, join the group and have fun on a closed repeater. Please don't be fooled by that c in the directory. The personality of the repeater group should be loud and clear after a couple nights monitoring. Find a group you like to listen to and jump in!

It is hard to find asymmetric USB (and LSB) filters these days.
In a few years old design for 9 MHz IF, KVG XFM-9B01 and XFM-9B02
were used. I am not sure which one is LSB and which one is USB as
contradictory information was given in the article.

If you settle for a single symmetrical SSB filter, then different
BFO-frequencies for USB and LSB are needed, but the number of suitable
filters is much larger. One source for 10.7 MHz filters in England is
Cirkit (tel. +44-992-441306).

If you think about a single conversion design, 9 or 10.7 MHz IF is quite
low, usable at 144-146 MHz, but if you are going to use it on 70 cm,
you should put separate helical front end filters for the 432 MHz DX-
band and the 435-438 MHz satellite band.

For about 20 years now, we've been using car batteries on FD. An 80 amp batt
should get you through all of FD,but have a spare for ur car.....
Remember that most of the time u are receiving which draws but little....
even when transmitting, when u are not talking, there is no power drain
(in SSB, that is, FM is different, constant carrier) plus the rating of
150 watts is PEP....and you are not at peak power very much of the time...
it goes up and it comes down......there is a hydrometer that you can put into
the battery (where you fill it w/ water) and it will tell u the condition.
FD is the funnest thing in AR.

See, now that's the kind of comment that does not contribute to
meaningful dialogue.

Oh for God's sake, who's saying we're perfect? We aren't, ask us! The
fact is though, that except for the crud magnet repeaters, of which there
are a couple, jammers are not common. I operate almost 2 hours a day on
2 meter FM repeaters during my commute, and maybe run into a jammer once
or twice a month. That's not gossip or hearsay, old chap. That's a fact.

Perhaps you are focusing on hearsay and gossip rather than experience?
The NASA $100K equipment story sounds more made-up than anything else.

As far as FCC enforcement goes, I'll agree that it leaves a bit to be
desired. It is my understanding that the FCC tends to focus on HF
jamming and violations, for obvious reasons.

Glad to hear that it's like that in the Bay Area, Bob. It's not like
that here in Southern California. For the most part, 440 is simply not
used most of the time. Most of the activity is on the open repeaters,
but the few open repeaters are so congested that for most of us it's not
much fun. Easier to hit the band change switch and move to 2 meters
where open repeaters are plentiful and fun, and less congested.

What is needed in Southern California is a radical reform of the way 440
is coordinated, with private and closed repeaters sharply limited with
respect to coordination. It has worked wonderfully on 2 meters.

> Sometimes I wonder why I have a dual band.

I realize this may be a novel concept, but have you actually ever bothered to listen to some of these "closed" repeaters, find one which you like, and write to the repeater trustee asking for information on how to join the repeater?

Closed repeaters != cliques. Many machines are "closed" for members only. Repeaters are expensive to put up and maintain - often several thousand dollars per year.

Of course, I can understand where your objection comes from. Its that welfare-state mentality creeping into the hobby again. "Whaddya mean PAY for access to a repeater?!?!? I'm BREATHING, aren't I? Its my right!"

Sorry, as a repeater trustee for one of the unofficial Brown Radio Club's repeaters, I spend hundreds, if not thousands, of dollars each year maintaining the repeater. While I don't mind spending the money, I'm not going to allow the repeater to become a cesspool like some repeaters in the area are becoming. Therefore, the repeater is "closed".

However, just because it is "closed" doesn't mean you can't get on it and use it. All you need to do is ask me. If you're polite and a good operator, then okay. (And yes, Dan, I even allow no-code techs on. In fact, they are the single largest group, by license class.) If you're a lid looking for a free ride because you've been drummed off every other repeater in the state, expect to be told to take a hike. In two years, I have only thrown off 1 person (N1JBC, Edwin Barton, a kid from an affluent section of RI who was caught jamming several other 2 meter machines in addition to mine) and have denied access to 2 others.

None of this changes the implications of the FCC's letter earlier this year. It was clearly affirmed that any repeater trustee can restrict access to his/her repeater. This implies that ALL repeaters are in fact "closed". There is no such thing as an "open" repeater. You are operating there at the invitation and goodwill of the trustee, and your operating privs can be revoked at any time.

No, that's not what I said, and that's not what the FCC said in their
letter. If you are thrown off a repeater, however, and continue to
operate simplex on the repeater input and/or output, expect to have
malicious interference complaints filed against you.

> meaningful dialogue.

I believe its a valid question. Perhaps you are too close to the
situation, and your expectations are such that you are unwilling or
unable to see how things have deteriorated.

Then again, maybe the repeater(s) you frequent don't have the problems
I've encountered in two dozen states.

> Perhaps you are focusing on hearsay and gossip rather than experience?

Nope, those are my experiences. Sorry they differ from yours. Perhaps
its simply a matter of perspective. How long have you been involved in
ham radio? I've been around it for a decade, so perhaps my expectations
are based upon what I thought ham radio was, or what I expected it to
be, when I was introduced to it a decade ago.

> The NASA $100K equipment story sounds more made-up than anything else.

Well, since I've never known KD1NR to lie, nor have I known the person
he spoke with (someone who posts here infrequently) to lie either, I
have no reason to assume its "made up".

Hello All,

I have just finished a HyperCard Stack that will allow control of a Yaesu FT-747GX.

I now need your help.

I am looking for people that have a Macintosh and a FT-747GX (or perhaps any other Yaesu radio) who can help me beta test this stack.

If you would like to help just let me have an e-mail or street address and I'll send you off a copy.

Kind regards, Sean.

3018. VPED ver 1.05 PHONE Pile-up Trainer has been released

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-30 12:17:35 UTC
From: kitagawa@ee.ES.Osaka-U.AC.JP
Message-ID: <KITAGAWA.94May30211735@qed.laser.ee.es.osaka-u.ac.jp>
Source record: 266040
Cross-posted to: rec.radio.amateur.misc,tnn.radio.amateur,fj.rec.ham

VPED ver 1.05 voice pile-up trainter for IBM-PC + Sound Blaster has
been released by JE3MAS MasIII Hiroyuki Kozu. This is a phone version
of PED. Enjoy phone contests and DX-peditions in virtual world, and
don't forget to call us in the real WW phone!

*--- *- ***-- --** --- ****
masa JH3PRR // Mt.RF JA3ZOH
*--- **** ***-- *--* *-* *-*
How to obtain VPED?

[FTP] You can always get the latest version of VPED by anonymous ftp
from the primary archive site;
hostname: qed.laser.ee.es.osaka-u.ac.jp
IP address: 133.1.140.211
directory: /pub/radio/vped
filename: vped105.zip (ver 1.05, for example)

It will be also uploaded to the SimTel archive /pub/msdos/hamradio
directory in a couple of weeks.

[Mail] You can also get VPED by mail. Send mail

To: ped-request@qed.laser.ee.es.osaka-u.ac.jp

with body lines,

get vped105.zip.uu1
get vped105.zip.uu2
get vped105.zip.uu3

to get vped105.zip.uu1 through vped105.zip.uu3 from which you can
reproduce vped105.zip. See instructions given at the beginning of the
first file. If you don't have UUDECODE or UNZIP, see the Appendix.

How to exchange information about VPED? (PED Mailing List)

Other useful commands you can mail to the above address include;
help (help for available commands)
index (index of available files)
info (info about PED Mailing List, PED, and VPED)
subscribe (subscribe to PED Mailing List)

We have created the PED Mailing List for PED/VPED users to help each
other, exchange information and share knowhow. You are welcome. The
author is also subscribing to the list and communicating with the

users, but he is NEVER OBLIGED TO SUPPORT users in any sense.

The manuals probably need improvements. Your feedbacks are welcome.
Send them to PED Mailing List <PED@QED.LASER.EE.ES.OSAKA-U.AC.JP>.

VPED would be much real if you can use voices from nine different
persons. The maintainer of PED archive is planning to make a common
place to exchange your VD files. If you don't mind, please contribute
your own VD file to the archive. The announce will be made when the
place is ready. Stay tuned!

Appendix: How to obtain UUDECODE and UNZIP?

If you get PED/VPED files by mail, you need UUDECODE. If you don't
have it, you can get it by sending mail

To: ped-request@qed.laser.ee.es.osaka-u.ac.jp

with body lines,

get uudecode.doc
get uudecode.dbg

Save UUDECODE.DBG on your DOS and feed it to DEBUG (which should be on
almost all DOS) by typing

DEBUG < UUDECODE.DBG

This will make UUDECODE.COM in a minute.

Just in case you don't have UNZIP, you can get it from the same place
in the same manner with the body line,

get unzip51x.zip.uu

On the other hand, perhaps you are too prone to complain rather than simply enjoy the hobby. I travelled for years on business to virtually every major city in the 48 States, and the only place I was flat-out unable to enjoy the hobby was New York City. I'll agree that the hobby there has attracted an inordinate share of jammers. Everywhere else I found the 2 meter repeater scene to be friendly and in good order.

Forgive me, but I think my powers of observation are as good as yours. :-)

: Then again, maybe the repeater(s) you frequent don't have the problems
: I've encountered in two dozen states.

Encountered, or been plagued by? We all encounter jammers if we work 2 meters long enough. Are you telling me that it was so bad that your enjoyment of the hobby was seriously inhibited. That strains credibility past the breaking point.

: > Perhaps you are focusing on hearsay and gossip rather than experience?

: Nope, those are my experiences. Sorry they differ from yours. Perhaps
: its simply a matter of perspective. How long have you been involved in
: ham radio? I've been around it for a decade, so perhaps my expectations
: are based upon what I thought ham radio was, or what I expected it to
: be, when I was introduced to it a decade ago.

Well, let's see. I was first licensed in 1966. Guess that makes it 28 years. (Got my Advanced in 67 (or was it 68? Can't remember any more :-)). In those days there were only a couple of repeaters in LA. They got jammed now and again. We still enjoyed the hobby though. Just like now.

As for your expectations a decade ago: Maybe you just expected a perfect world and are frustrated when it contains the usual quota of rogues? Life does have a way at times of not measuring up to expectations! :-)

: > The NASA $100K equipment story sounds more made-up than anything else.

: Well, since I've never known KD1NR to lie, nor have I known the person
: he spoke with (someone who posts here infrequently) to lie either, I

The NASA deal sounds hokey to me. But if someone represents that it happened, then I'll accept it. But normally the guys that to the RDF in LA have the standard loop antenna and simple good operating skills. Not $100K NASA super dooper gizmo doodads. (Just like everywhere else.)

3022. NICAD CHARGING

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-30 16:01:00 UTC
From: alan.eldridge@dragonbbs.com
Message-ID: <104.1664.2674.0N03BBAE@dragonbbs.com>
Source record: 265973

For constant voltage (vs. constant current) nicad charging,
what is the volt-per-cell setting?
An excellant article on building a pulse battery charger was
published in 73 magazine in the QRP column.
I built it, it works great on gel cells, etc.
The author states in the article you can use it for nicads, as
long as you get the voltage setting right.
Too low, you don't get a full charge, too high, you cook the cells.
One source (The DF Handbook) recommend 1.43 V per cell. I've used
that on several packs and have gotten a very shallow charge each time.
I've done this right at the terminals, so I know I'm going right to
the cells, not through a blocking diode.
Any suggestions?

... To err is human, to moo Bovine.

3023. CEPT licenses in East Europe?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-30 16:02:07 UTC
From: jmhertz@zig.inria.fr
Message-ID: <2sd2lv$6q8@sophia.inria.fr>
Source record: 266031

As far as my knowledge goes, the recommendation of the CEPT
concerning radio amateur licenses is applied in the following
East European countries:
Estonia, Romania, Slovakia, Czechia, and Hungary
(according to a list in CQ DL 7/93 which is very useful for the
purposes of a radio amateur who also enjoys traveling very much)

Are there now other countries who have in the meantime applied
this CEPT recommendation, to?

I'd like to have especially information on Poland, Lithuania,
Lettonia, and Slovenia.
Any hints welcome, whether citations from journals or addresses
in the countries where one might write to in order to get such
information.

Source record: 266034

Hi Joe,

Amateur Radio is a fraternity of people with similar skills and interests. Signals such as "QSY" and "73" can be compared to the secret handshake that other fraternities enjoy.

In the late 1970's, early 1980's, police departments -- in response to prevailing opinions by the Associated Public-Safety Communications Officers (APCO) organization -- began to prohibit 10-codes from their radio channels because clear text was more understandable and efficient. The concluded, quite correctly, that no-one was being fooled by the police codes and there was no logical reason to use them. The transition was short-lived, however, as the officers "in the trenches" liked the old codes. They didn't disagree with any of the reasoning, they just liked to use them.

I think we're stuck with "73" and "QSY" for along time. I don't think you'll find many people to disagree that there are more efficient ways of communicating, but I don't think you'll find many people ready to switch either.

You can't appreciate the situation here until you've operated here. I wish I had a way to scan you guys the pages of the 440 repeater "guide" here -- very very few open systems and THEY ARE ALL PUT ON THE SAME HALF-DOZEN PAIRS WITH DIFFERENT PL'S!!!! It's awful. We have renegades fighting the coordinating body and I don't blame them one bit.

Half of the coordinated repeaters only exist on paper.

Don't blame any So.Cal. operator for being pissed as hell at the 440 situation. It stinks to high heaven.

: --
: ____[Robb Topolski]___[San Clemente, CA]___[topolski@kaiwan.com
]____ : Exactly the point. You have to operate 440 in So Cal to "get it"
I guess. Most of the closed/private repeaters see little or no use.
Which is fine, that's the trustee/owner's prerogative. No one argues
that. What is objectionable is that the coordinating body reserves the
repeater pairs for a small group, thereby discouraging other potential
repeater trustees from opening OPEN repeaters on 440.

To validate my point, all one needs to do is contrast 2 meters to 440 in
Southern California. Two meters is bursting with vitality! Many many
open repeaters with good operating procedures and courtesy, AND LOTS OF
FRIENDLY QSOS as the order of the day. 440? Mostly dead silence. The
few open repeaters are very active; so much in fact that it difficult to
get time on them.

By the way, before anyone accuses me of "expecting a free lunch, embracing
a welfare system, etc. etc." please be advised that I am a member of two
repeater clubs and voluntarily pay a total of over $200/year to help with
the cost of keeping up club repeaters.

440 in Southern California needs a new coordinating body and a new
coordinating philosophy, it's as simple as that. I propose the following
as a starter: "If you aren't open, you aren't coordinated."

Limited use of terms like QRM, QRP, etc., adds to the romance and
tradition of ham radio since it recalls the origin of the hobby in
CW. These codes are, of course, still vital in CW work. They can be
overused on phone, but -- like so many things -- they are nice in
moderation.

[...]

>For those who are interested, he's KA6MWT

There is absolutely no justification for taking KA6MWT's outrageous
statement and using it to slam the no-code license. I don't think
these extreme statement do anyone any good.

Since it's possible with a little research in the callsign server to
figure out that Roger Bly's call is KA6MWT, it is also quite simple to
notice that holders of calls in this region have been licensed for
quite some time---since at least the mid-1980's. Whether or not
KA6MWT is a lid has nothing at all to do with current licensing
policy.

It's bad enough when the arguments keep repeating over and over. It's
getting destructive when they become ad hominem.

I have never said that I have any objection to joining a repeater group.
As a matter of fact, I belong to the KJ6TQ repeater at 446.650 that I
mention above, both for the purpose of supporting a worthwhile effort and
to have the autopatch and paging privileges. I have never had a problem
with membership charges for expanded use priveleges on a repeater. The
problem that I have is with co-ordinated pairs being used by a small
group (5 or 6 people) to the exclusion of all others. There are also a
large number of paper pairs here in So. Cal. where I have never heard any
activity whatsoever. Unfortunately, since these pairs are "coordinated"
they are not available to someone who may want to put up an open system.
Oh well, I guess I still believe that old saw about the airwaves
belonging to the people. ;-)

: I don't know what it's like in other parts, but here in Utah there are
: only two simplex frequencies on 440...

The rest of us operate simplex in the 431 - 433 part of the UHF band. You
don't see simplex use in the repeater sub-bands of 2meters. Here in
northern california we use 441.000 446.000 446.500 for simplex or we talk
car to car on the output frequency of the repeaters we use every day.

Next weekend is the VHF contest. Check out the simplex frequencies for
some long distance communications. Work the guys that are in the contest,
They are having a blast, you can enjoy the spirit!

>they are not available to someone who may want to put up an open system.

Well, that's not exactly true...someone could put up an uncoordinated
repeater and see if there are complaints about interference with the
coordinated repeater. If no such complaints arise, the uncoordinated
repeater can operate with impunity. Indeed, the licensee of the uncoordin-
ated repeater can then apply for coordination. Just because a freq. pair
is coordinated does not automatically preclude the use of an uncoordinated
repeater. It's just that if an uncoordinated repeater interferes with a
coordinated one, the onus is on the uncoordinated repeater to resolve
the interference (cf. FCC Part 97, para. 97.205 (c)). If, as you say,
certain freq. pairs show no activity, they can and should be re-coordinated.

Jeff,
If I didn't live in a first floor apartment at the front of the
building with no roof access, that's among the many projects I'd be
working on. As it is, I have a dual band J-pole in the living room and am
trying to figure out a way to rig up a 10 meter dipole in the apartment
without appearing live and in color on channel 2 (no easy way to run a
decent RF ground). Right now, my only 10 meter operation is mobile and
I'm not a real whiz at using a straight key on the freeway :)

Roger Buffington (rogjd@netcom.com) wrote:

: What is needed in Southern California is a radical reform of the way 440
: is coordinated, with private and closed repeaters sharply limited with
: respect to coordination. It has worked wonderfully on 2 meters.

You may want to pick up a copy of the Policy and Procedures of Coordination from each of the coordinators in Southern California. This is the set of rules that need to be reassesed. I would be most interested in seeing the UHF policies for southern california. Can you share them with us? The northern california policies are published in the narcc repeater directory available at ham radio stores. The question of whether to operate the repeater open or closed is left to the repeater trustee.

Going back in history you will find that 2meters was always an open repeater band with the folks that wanted to operate closed or private systems being unfairly kicked up to the 440 band. What you see today is a result of early day discrimination by the 2meter coordinators. Take a look at the 1280 repeater band where there are still frequencies left to operate high level repeaters and you will see a good mix of open and closed repeaters.

Does the Southern California policy allow for paper repeaters? I think not! There is too much pressure from the new repeater groups to allow frequencies to go unused.

Landline BBS Open to All: 916-262-1657
RACESBUL.328 RELEASE DATE: May 30 1994

SUBJECT: OPS - What Leads Them To Serve?

"I'm a volunteer and I don't have time." Ever heard that response in a call out? Or, "I don't feel like doing it"; or "There isn't anyone available."

Well, it does happen, more so in units without a clear goal than in those with strong effective leadership that screens out those that lack capability and dedication. Fortunately, there is another side to the situation; namely those who seem to ALWAYS respond, no matter what the personal sacrifice. At some level we have all seen it, whether radio officer, communications officer, emergency coordinator, director of communications, section manager, search and rescue captain, volunteer fire chief, coordinator, pilots or communications specialist.
In an emergency the most valuable responder is the person that can respond to the call out regardless of their personal situation. Key participants in Search and Rescue or Drowning Accident Recovery units are often of this type; and worth their weight in gold. From them you never hear "I don't feel like doing it" or "There isn't anyone available." When needed, they are there. Period. They lead by "doing".

What brings such dedication? What causes leaders like that to be so committed in time and effort? It's an inner sense of responsibility. A sense that says, in effect: "Once I've committed to this program, call me and I will respond. Whatever is needed, wherever, I'll be there." These are the natural leaders whatever their title; they are the "gems" that get the impossible done. Like the FCC Amateur Licensee who was strapped to the skids of a helicopter and placed atop a mountain to establish a relay link into an inaccessible canyon.

While there are instances where it may seem to be impossible to respond, there are those who ALWAYS find a way to be where they are needed. Is it dedication? Or? Well, you name it. Whatever the characteristic is called it exists in more instances than we realize. Obviously, not all can achieve that level, but those who do not can back them up and support them. Their leadership helps to strengthen others inner resolve to serve when called on in times of need. EOM

Source record: 266050

1. Someone tell me what would happen if somebody put an uncoordinated repeater on the air (assuming that no activity has been heard over a certain time period on that particular frequency pair). Is a coordinating body equivalent to the law? (i.e., will the FCC always side with the body?)

2. If all the frequency pairs are taken, yet some aren't being used, it seems (as in the broadcast industry) that one shouldn't be able to hold onto a frequency pair. The burden should be on the group holding the pair; if they can't but something on the air within a certain definite period of time then the frequency pair should go to the next group on the waiting list (assuming there is a wait list before the coord. body).

There is never any justification for jamming a repeater, though. I am so shocked that someone would resort to that behavior, then openly admit that they've been doing it. This reminds me of those gang members who show no reMorse for their crimes - no sense of morals. Their parents failed to instill proper social behavior.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z MAY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 MAY AND FORECAST UP TO 2 JUNE

IPS Warning 15 was issued on 26 May and is current for
interval 28 May to 7 June.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 069/003

1B. SOLAR FORECAST
31 May 01 June 02 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 070/005

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 29 May
Learmonth 28 4444 4453
Fredericksburg 31 33
Planetary 40 37

Observed Kp for 29 May: 5655 4534

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
31 May 35 Active to minor storm.
01 Jun 35 Active to minor storm.
02 Jun 35 Active to minor storm.

2C. MAGNETIC COMMENT
disturbances expected until 7 June due to a coronal hole.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
30 May normal-fair normal-fair poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
31 May normal-fair normal-fair poor-fair
01 Jun normal-fair normal-fair poor-fair
02 Jun normal normal-fair poor-fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values to 15% depressed,
with strong spread F observed during local night.

Observed T index for 30 May: 23

Predicted Monthly T Index for May is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
31 May 20 Near predicted monthly values to 15% depressed.
01 Jun 15 Near predicted monthly values to 15% depressed.
02 Jun 15 Near predicted monthly values to 15% depressed.

4C. AUSTRALIAN REGION COMMENT
Strong spread F expected during local night. Degraded HF comms
expected until 8 June due to coronal hole sourced activity.

The 3-Hr Ap Indices for 28 MAY 94 are: 5 5 4 15 29 57 56 32
Greater than 2 MeV Electron Fluence for 29 MAY is: 4.4E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. The sun remained spotless. No
events were observed.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at active to minor storm
levels for the past 24 hours. High latitudes stations saw
periods of major storming. Activity is most likely due to
a well positioned coronal hole. Energetic electrons (GT 2

MeV flux) ranged from normal to moderate levels.

Geophysical activity forecast: the geomagnetic field is
expected to be at active to storm levels for the entire forecast
period. Major to severe storming is possible during local night
time, especially at high latitudes.

Event probabilities 30 may-01 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 30 may-01 jun

A. Middle Latitudes
Active 20/20/20
Minor Storm 35/30/25
Major-Severe Storm 25/25/20

B. High Latitudes
Active 15/15/15
Minor Storm 30/30/30
Major-Severe Storm 35/35/35

HF propagation conditions were below-normal from the polar
to upper-middle latitude regions. Hardest hit have been the
transauroral paths where periods of useless propagation have
been observed, particularly during the local night sectors. No
changes are expected over the next 72 hours.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

: Mitchell - mj.rodda@auckland.ac.nz

I was a radar repairman in the Army in the late 60's, and we had these somewhat stupid circumstances when I was stationed in Minneapolis.

Every day, we had to lock the switch buttons of the five 'fixes' from the radar in the safe, since the names on them were classified. Some names like lin/log, integrator, and dickey fix.

The whole joke about this is that the rooms where the test benches were located had full glass windows facing to the outside, and there were just open fields up to the fences. So anyone with a pair of binoculars could look through the windows and see the same exact buttons on the test equipment!!!

It just gives more ammunition for the people who claim that military intelligence is an oxymoron.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source
of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group and
to news.answers every two weeks. You are now reading the first article, which
explains what rec.radio.info is, and answers some Frequently Asked Questions.
The second article is titled "Submission Guidelines", and you only need to
read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with
a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit
chat about radio. Rec.radio.info will contain informational, factual articles
only. Follow-ups are redirected to an appropriate other group, and further
discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it
was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered
presentation in rec.radio.info (even with cross-posting, only one message, with
```

a unique Message-ID, is propogated across the net). This tag also facilitates a pre-existing method of dropping or cancelling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:
/Newsgroups:.*[,]rec\.radio\.info/h:j
either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:
rec.radio.info:!s/:^
in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:
sequence
rec.radio.info
rec.radio.
at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, I will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for disussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is Mark Salyzyn. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@ve6mgs.ampr.ab.ca

Comments, criticisms, suggestions or questions about the group can be e-mailed to:
rec-radio-request@ve6mgs.ampr.ab.ca

But before you do so, please be sure to check out the "Submission Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. I receive information in my mailbox; I then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap (or possibly comp.newprod) may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, I would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. I

reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all I can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

brian@UCSD.EDU (Brian Kantor) has kindly supplied a mail list server for rec.radio.info. Non of the articles will be digested, due to their size, so you will receive individual mailings for every article posted to the group.

Mail sent to radio-info@ucsd.edu will be forwarded to the moderator and thus is an alias to rec-radio-info@ve6mgs.ampr.ab.ca

To subscribe and unsubscribe via the listserver; the format for that is

sub address radio-info
unsub address radio-info

where 'address' is your full mailing address. Send this request to

listserv@ucsd.edu

Note that the server will automatically delete any address that bounces mail. If you leave the address portion blank, it will try to deduce your address from the mail headers. This may not work if you are on bitnet, milnet or some other non-Unix host, so it is recommended to put your return address in any case. For example:

sub mymailbox@myhost.mydomain.mil radio-info
or
sub MEMEME01@DMBHST.bitnet radio-info

or something like that.

-- Will the material appearing in rec.radio.info be archived somewhere?

< Dated information here >

Yes. Still firming up details at the moment but here is a preliminary list:
- unbc.edu as maintained by Lyndon Nerenberg <lyndon@unbc.edu>
- nic.funet.fi maintained by Risto Kotalampi <rko@cs.tut.fi>
saved to /pub/dx/text/rec.radio.info currently stored as numbered files.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat

transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for news.answer. This requires co-operation and good will to be beneficial to the community in the rec.radio hierarchy.

I suggest reading the posting guidelines for more information. I am open to suggestions.

I thank the following individuals for their input into this article:
rec.music.info moderator Leo Breebaart rec-music-info@cp.tn.tudelft.nl
rec.radio.broadcasting moderator Bill Pfeiffer wdp@gagme.chi.il.us
Paul W. Schleck, KD3FU pschleck@unomaha.edu
Ian Kluft, KD6EUI ikluft@uts.amdahl.com

--

I think the ARRL is the only one still running an outbound service, and you have to be a member to use it. But it IS cheap; $1 for up to 10 cards, or $2 per pound (about 150 cards).

The ARRL also supports incoming bureaus for each call area. For your call (8th call area), the incoming bureau is:

8th Area QSL Bureau
PO Box 182165
Columbus, OH 43218-2165

You can contact them about their policies regarding keeping envelopes on file to receive your cards.

Greater than 2 MeV Electron Fluence for 30 MAY is: 2.9E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. The sun is spotless. There
were no events observed.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at active to major storm
levels for the past 24 hours. Activity is most likely due
to a well positioned, recurrent coronal hole. Energetic
electron flux (GT 2 MeV) ranged from normal to high levels

over the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be at active to storm levels for the entire forecast
period. Major to severe storming is possible during local night
time at high latitudes.

Event probabilities 31 may-02 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 31 may-02 jun

A. Middle Latitudes
Active 20/20/20
Minor Storm 30/30/30
Major-Severe Storm 25/25/25

B. High Latitudes
Active 15/15/15
Minor Storm 30/30/30
Major-Severe Storm 35/35/35

HF propagation conditions were below normal for most
regions today. Conditions were significantly degraded at times
during the local night hours, occassionally affecting
propagation even over the low latitude regions. Sporadic-E has
increased along with absorption and spread-F. MUFs are
depressed up to 50 percent for transauroral paths, up to
approximately 35 to 40 percent over the middle latitude paths,
and near 30 to 35 percent over the low and equatorial regions.
No significant changes are expected over the next several days.

3055. need NYC repeater freq

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-31 04:59:09 UTC
From: SYJERRY@duq3.cc.duq.edu
Message-ID: <2seg6t$267@godot.cc.duq.edu>
Source record: 266060

I'm going to be in new york (manhattan) next week and I'd like to know
repeater freqs (and offsets and PL tones) for 2m around the area.
Last time I was there, I could not get to any of the local repeaters
at all and only got one that is 50 mi north of manhattan.

please email replies.
thanks in advance

Hi Roger. We've enjoyed one or two good roundtables on .925 before.

Roger Buffington (rogjd@netcom.com) wrote:
> 440 in Southern California needs a new coordinating body and a new
> coordinating philosophy, it's as simple as that. I propose the following
> as a starter: "If you aren't open, you aren't coordinated."

I couldn't agree more. In fact, I'd even be happy with "any new
coordinations must be open and remain open for a minimum of 12 months"
until some kind of reaonsable balance is struck.

Without sticking my nose into the good book, I think there should be no problem with this as long as the uncoordinated operation does not interfere with a coordinated operation. The big asterisk here is that the coordinating body can coordinate an operation six months from now, and if you're uncoordinated, even if you've "been there" longer, you'll have to move on.

> 2. If all the frequency pairs are taken, yet some aren't being used, it seems

One of the funny things about SoCal is that SCRBA refuses to release the actual location of the repeaters. All you get is a long list of callsigns, frequencies (no PL's) and the boundries of SCRBA's influence. You don't know if a particular repeater is in Santa Barbara or just west of Yuma.

David

The best source of antenna from the users. Not some fancy
written article.

Thru-glass antennas work, with about 2 db of loss.

The biggest problem, the antenna needs to be on top of the car
if possible. Could double your range.

John, N6QQ

3061. Pro-2004 Repair Help

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-31 07:27:35 UTC
From: ksmith@theodolite.ae.calpoly.edu

My Realistic Pro-2004 scanner has a sticky key. It looks like something has indented the number 6 key, causing it to stay pressed intermittantly. I've removed the screws that hold the PC board in place which contain the keys, but I'm still unable to remove the board. Does anyone know if this is glued to the membrane face, or if it's attached some other way? I'm thinking if I can get behind the membrane front, I can iron out the indentation of the keypad and fix the problem. The service manual has been of no help in this regard.

Reply via this board or email, I'll read (and much appreciate) either!

Thanks,
Kirk J. Smith (KD6RCT)

3062. Re: "The Rhythm of the Code" tape

Just another data point on this Kawa tape. I, too, ordered the tape and got one that had one iteration of the code on one side and then had Jazz music on the rest of the tape.

I wrote to indicate this and was told I had to send back the tape - my expense again, then wait for Kawa to get around to sending a replacement - my time wasted not his. Neither the tape nor the technique was worth the effort. Just a "rap" version of code and not particularly good.

Anyone want a tape with a little code and a lot of jazz on it??

Erich

DIGEST OF ARTICLES -- QST, November, 1993

Following are digests of articles printed in the November, 1993 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. Subsequent issues will be posted one per week until they "catch up" to the current date in mid-1994, thereafter monthly.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:A 13.8-V, 5-A Regulated Power Supply
Author>Spencer, Ben - G4YNM
Source>QST Nov 93, pp. 27-29
Abstract>Design and construction of a power supply for a transceiver, containing protection against shorts, overload, and overvoltage. It is built with inexpensive and/or surplus components from sources identified in the article.

Digest>Mr. Spencer has designed and built a 13.8-volt power supply with a current capacity of 5-amps. In it, he has built protection against damage from short-circuits, time-dependent overload, and overvoltage. Thus he has designed it to be safe against almost all of the common causes of damage to either the supply or the equipment it powers. Yet he has tried to make it inexpensive by utilizing inexpensive and/or surplus components.

In this article, the author gives full construction details. He includes wiring diagrams, parts placement information, and recommended sources of low-cost surplus parts for some of the key components.

He uses the unit to power a 25-watt transmitter that continuously draws 4.5 amps. With that load, the heat-sink on which the regulator component is mounted gets very hot, but this is within design specifications. The supply has proven to be reliable and performs its functions well.

Title>TA2:A Low-Voltage Disconnect
Author>Bryce, Michael - WB8VGE
Source>QST Nov 93, pp. 31-34
Abstract>Design and construction of a circuit that protects a battery from damage caused by excessive discharge.

A low-voltage disconnect (LVD) protects a battery, or its load, from damage that might occur when the battery discharges until its output voltage drops to a very low level, or zero. Mr. Bryce has designed and built such a circuit and has written this construction article so that

readers may duplicate it.

The unit measures the battery voltage continuously and opens the supply circuit when the voltage drops below a pre-set level. The voltage must rise to a higher pre-set value before power can be turned back on.

The circuit uses IC op-amps and CMOS gates in conventional comparator and logic circuits. The output transistor, which provides operating current to the coil of a relay, is a Darlington integrated circuit.

Although the relay contacts can be used to control either a.c. or d.c. loads, the author suggests that if it it is to be used to switch 120-volt a.c., the main relay should be mounted in a separate enclosure.

A complete kit of parts is available from SunLight Energy Systems, 2225 Mayflower NW, Massilon, OH 44647 for a price of $58.00, including domestic shipping. A PC-board only is available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269, for a price of $13.50, including domestic shipping. A PC-board template package is available from the ARRL Technical Department Secretary, 225 Main St., Newington, CT 06111 for a business-size SASE. Address the request to "Low Voltage Disconnect Template".

Title>TA3:A Simple, Two-Tone Audio Generator
Author>Lee, James G. - W6VAT
Source>QST Nov 93, pp. 35-36
Abstract>Instructions for constructing an audio generator.

Digest>An audio generator is a useful item to have around a shack for SSB transmitter testing, or other audio experimenting and adjusting. Mr. Lee presents construction information for a very simple and inexpensive two-tone generator.

The circuit is made up of two JFET Hartley oscillators that feed into a single output amplifier stage. The frequency of each oscillator is adjustable; one is normally adjusted to 600-Hz. and the other to 2100 Hz. There is no "magic" to those frequencies, but they provide a convenient pair of high- and low-tones that are not harmonically related. A selector switch is provided to switch on one channel, the other channel, or both, at will.

Title>TA4:An Update on Compact Transmitting Loops
Author>Belrose, John S. (Jack) - VE2CV
Source>QST Nov 93, pp. 37-40
Abstract>A report on computer studies, verified by field tests, of radiation patterns from small transmitting loop antennas. Results show that such antennas, when carefully made, can be useful and fairly efficient radiators, but in almost no configurations will they equal a half-wave dipole at comparable heights over real ground.

Digest>Mr. Belrose has made a computer study of a number of small loop antennas at different frequencies and has tested several in an antenna laboratory. In this article he reports his results.

He defines an "electrically small loop" as one with circumference between 0.04 and 0.1 wavelength. Such loops have very low radiation resistance and so, in order to obtain anything like a reasonable ratio of radiated power to power lost in the form of heat, one must reduce the resistive losses in the conductors, joints, and capacitor dielectrics to an absolute minimum. For computer-modelling, the tacit assumption is that all conductors are solid copper, all joints are welded rather than soldered, and capacitor dielectrics are air or vacuum.

The author first analyzed a 3.4-meter (11 foot) diameter hexagonal loop mounted vertically over poor ground, with its center 2.5-meters high (about 8-feet). When operated at 3.75 MHz., the elevation plot of radiation shows that most energy is directed straight up! Even in that direction, the radiation is about 2.6 dB. weaker than that from an isotropic source, or nearly 5 dB. lower than that from a half-wave dipole at the same height.

However, there is still appreciable radiation at usable angles. At an elevation angle of 30-degrees above the horizon, it is about 6-dB weaker than that of a dipole. At 15-degrees, it is minus 8-dB. At even lower angles, the intensity drops off rapidly: at 10-degrees to minus 10-dB, and at 5-degrees to minus 16-dB compared with the dipole.

When the same antenna is raised to a height of 28-meters (about 92-feet), the radiation at 15-degrees elevation is only down about 3-dB from a horizontal dipole at the same height. Next, he modeled a 1-meter (40-inch) diameter loop on the 20-meter band mounted 15-meters (about 50-feet) high, both horizontally and vertically over poor ground. His plots show that the low-angle radiation that is so desirable on that band is much better from a horizontal antenna than a vertical one in this configuration.

At 15-degrees elevation angle, the horizontal loop radiates about 3-dB. MORE than a horizontal dipole. With vertical polarization, however, the signal is down about 2-dB. below the dipole. When the same antenna is modeled over sea water instead of poor ground, the relationship reverses; with vertical polarization, the loop out-performs a dipole at all angles below 45-degrees, even down to near zero degrees. The signal from a horizontal loop, on the other hand, drops off quickly below 15-degrees elevation.

Another graph shows the relationship between antenna gain and loop size over a wide range of frequencies. It shows that a 3.4-meter (11-foot) diameter loop can be used over a frequency range of about 1.5- to 8-MHz.; a 1.7-meter (about 5.5-foot) diameter from 2- to 14-MHz.; and an 0.8-meter (2-feet, 8-inch) loop from about 5 to 30 MHz. The radiated signal strength ranges from minus 14 dB. at the low end of the frequency range of each loop up to about minus 1 dB. at the upper ends, compared with dipoles.

In all cases of small loops, minimizing resistive losses, coupled with the inherently low radiation resistance, causes the antenna to have a very high Q. The resulting bandwidths are quite narrow and the antenna must be retuned to resonance every time even a small change is made in the operating frequency.

The author includes a graph plotting the 2:1 SWR bandwidth of each of the three antennas described. All three indicate a bandwidth of only 2- or 3-KHz. at the low ends of the frequency ranges listed above. At the high ends, they broaden to as much as 40-KHz. for the two larger ones and to 80-KHz. for the smallest one on the 10-meter band.

To complete his study, Mr. Belrose tested two loops on the 80- and 40-meter bands. One was 3.4-meter (11-feet) in diameter, and the other 1.7-meter (5.5-feet). He compared them with an inverted-vee dipole. The loops were mounted at a height of 3.6-meters (about 12-feet), whereas the apex of the inverted-vee was at 15-meters (50-feet). His computer analysis predicted that the larger loop on 80-meters would perform down about 3-dB., and the smaller one on 40-meters about 1-dB, from the dipole. His tests made on the air bore out those results, within the accuracy with which he could evaluate them.

Title>TA5:Under the Hood II: Resistors
Author>Bergeron, Bryan - NU1N
Source>QST Nov 93, pp. 41-44
Abstract>A description of the types of resistors used in modern electronic construction.

Digest>Resistors used in radio construction are practically all of three types: carbon composition, film, or wire-wound. The author describes each type in detail, how they are used, and what factors should be considered when using them.

Carbon resistors are made of rod molded from particles of carbon mixed with other components to provide the desired resistivity. Wire contacts are attached to each end of the rod and the whole is molded inside a covering of plastic material. Film resistors are thin films of conductive metal deposited on insulating rods and trimmed to a final resistive value by a spiral groove cut in the film. Wire-wound resistors are made of resistance wire wrapped around an insulator.

The author explains standard resistance values, the difference between fixed- and variable-resistors, power-dissipation capacity, tolerances, color-coding and -labeling, stability, noise, and frequency effects.

Title>TA6:An Accurate Dip Meter Using the MFJ-249 SWR Analyzer
Author>Barton, David M. - AF6S
Source>QST Nov 93, pp. 45-46
Abstract>Adding a simple coil, built into a PL-259 coax connector, to the MFJ-249 SWR Analyzer makes it an effective dip meter.

Digest>Any ham who is interested in building r.f. equipment or experimenting with antennas needs a dip meter, an instrument that measures the resonant frequency of a circuit. It contains an oscillator that can be tuned over a wide range of frequencies and which has a coil that usually protrudes from the front of the instrument. When the coil is loosely coupled to a resonant circuit, and the oscillator is tuned to the resonant frequency, some of the energy from the oscillator is absorbed and there is a pronounced dip in current flow within the oscillator.

The current is displayed by a milliammeter but, on conventional dip meters, the frequency is not measured. To determine the exact resonant frequency usually requires that the oscillator frequency be read on a digital counter not included with the meter.

The MFJ-249 Analyzer is not, itself, a dip meter. It does contain an oscillator which is adjustable over a wide frequency range, and a digital counter that measures the oscillator frequency at all times to a high degree of accuracy. It also contains a meter calibrated in standing wave ratio (SWR); in normal use it is coupled to an antenna and reads the SWR on that antenna at the frequency at which the oscillator is set.

Mr. Barton cleverly perceived that, with the addition of a small pick-up coil, a capacitor, and two resistors, the MFJ analyzer could be transformed into a very effective dip meter. In this article he explains its operation and shows how to assemble the very simple external circuit that effects the transformation.

He explains its operation by observing: "Anything that removes energy from a badly-matched r.f. circuit improves the match, lowering the SWR." So he wound a small coil, loaded it with a parallel resistance, and attached it to the input of the MFJ-249. He used inductance and resistance values such that the SWR measures approximately 3:1 over most of the HF bands. When that inductor is loosely coupled to a resonant circuit, some of the oscillator energy is absorbed and the SWR indication dips in a manner exactly like that of a conventional dip meter.

The circuit that the author uses is made of a 180-ohm resistor connected directly across the input of the analyzer. Connected in parallel with that resistor is a 15-ohm resistor in series with a 1000-pf. capacitor in series with a 0.7 microhenry pickup coil. That is the complete circuit! The stated value of the pickup coil is not at all critical; it is made from a piece of insulated hookup wire wrapped three times around one's finger, making a 3-turn coil, about 3/4-inch (18-mm.) diameter. The circuit is soldered into a PL-259 coax connector with the coil protruding from the body.

The three-turn coil performs very well over almost the entire HF spectrum, but its sensitivity drops off a bit at the low end. To obtain higher sensitivity below 4 MHz., the author suggests adding one more turn to the coil.

In a side-bar, the author addresses the problem of "how to dip a dipole". It is difficult to couple a pickup coil to a straight piece of wire, like a dipole. Most people make a small coil of one- or two-turns, attach it across the center insulator of the dipole, and couple the dip meter to it. This usually works, but the inductance of the inserted coil lowers the frequency of the antenna, causing an error in measurement.

The way to overcome the detuning effect is to tune the auxiliary coil, independently of the antenna, to resonance at the same frequency. Prepare the small coil, connect it across a variable capacitor, and tune the resulting circuit to resonance at the desired frequency. Then, without changing the capacitor setting nor the shape of the coil, attach it across the center insulator with the coil and capacitor either in series, if it is at a low impedance point in the antenna, (as in the center of a dipole), or in parallel if at a high impedance point. Then couple the meter to the coil and dip the meter.

PRODUCT REVIEW pp. 75-81

conductor: Mark J. Wilson, AA2Z
QST Editor

Title>PR1:MFJ-249 and MFJ-207 SWR Analyzers
Author>Gruber, Mike - WA1SVF
Source>QST Nov 93, pp. 75-77
Abstract>Description of the two MFJ SWR analyzers. They both measure SWR of antennas and are essentially identical except that the MFJ-249 contains a digital counter to display frequency, while the MFJ-207 does not.

Digest>The MFJ-249 is the same unit described in the preceding article. The MFJ-207 is a less expensive model. The major difference between the two is that the '249 contains a digital frequency couter that displays frequency to a high degree of accuracy at all times; the '207 omits the counter. In addition, the '249 covers the frequency range from 1.8- to 170-MHz., whereas the '207 covers only 1.8- to 30-MHz. They both operate from self-contained batteries and are small enough to hold in one hand.

The reviewer found that both units perform their functions well and make adjusting antennas very much easier. Using the meters, he erected two dipoles, one for 20-meters and the other for 6-meters. In pruning the 20-meter dipole, he measured each step with both meters, in turn, and also with a Bird Model 43 SWR Meter.

He deliberately started with the wire too long, then pruned it a little at a time and made measurements with all three instruments. The resonant frequencies measured by the MFJ-249 can be considered the accurate ones; those determined by the MFJ-207 were sufficiently close for all practical amateur purposes, but it is much more difficult and cumbersome to measure frequency without the counter of the '249. The

Bird meter does not measure frequency.

For SWR measurements, all three instruments measured the same values, within 0.1, near resonance. Away from resonance, the SWR measurements differed a bit.

To determine the significance of the differing SWR readings, Mr. Wilson took the two MFJ units into the laboratory and compared measurements against a high-precision Q-Meter. He set up a test circuit with a precisely known standing-wave ratio of five difference values: 50-ohms resistive (SWR 1:1), 25-ohms resistive (SWR 2:1), reactive 50 -j50 ohms (SWR 2.6:1), reactive 50 +j50 ohms (SWR 2.6:1). Then he measured each of these networks at 3.5-, 14-, 28-, 50-, and 144-MHz. and tabulated the results.

Over the HF range, 3.5- to 28-MHz., the '249 never deviated by more than 0.1 from the true SWR measurement on purely resistive circuits. With the reactive loads, its readings were uniformly on the low side by as much as 0.3. The '207 read on the low side by as much as 0.3 with purely resistive loads and 0.5 for reactive loads.

The '207 does not cover VHF bands but the '249 was tested on 50- and 144-MHz. It read the resistive loads on the high side by as much as 0.4, the capacitive load (50 -j50 ohms) low by as much as 0.9, and the inductive load (50 +j50 ohms) on the low side by up to 0.2. For ham purposes, these indicated errors are probably not significant.

The analyzers can also be used to measure velocity factor and characteristic impedance of coax cables and also measure inductance and capacitance of components. The reviewer reports that they worked well in all those uses.

His final summary is that he found the MFJ-249 to be his favorite, by far. The lack of an accurate frequency measurement with the MFJ-207 requires, in practice, that one dip the unit, then measure its oscillator frequency by means of a calibrated receiver tuning to zero beat. If the receiver is in the shack and the antenna some distance away, it becomes a nuisance to have to carry the meter into the shack each time the frequency must be determined. Also, the oscillators in both units drift with changes in temperature. If the shack is warm and the outside chilly, the frequency at which the '207 dips and that at which its oscillator is measured will not be the same.

Title>PR2:Tejas RF Technology Backpacker II Model TRFT-550 Single-Band CW Transceiver
Author>Bauer, Jeff - WA1MBK
Source>QST Nov 93, pp. 78-80
Abstract>Description of a very small, light-weight, low-power CW transceiver.

Digest>The Backpacker II is a small, self-contained, CW transceiver. It is built for the 40-, 30-, 20-, 17-, or 15-meter bands. The one

reviewed is the 40-meter model. Its frequency coverage is 7.0- to 7.2-MHz. Its maximum power output is 1.5-watts. In transmitting, the unit draws 228 ma. supply current, 53 ma. while receiving.

The original Backpacker was designed by Roy Lewallen, W7EL, and was described in the August, 1980 QST. The receiver is a direct-conversion design in which the signal passes through the transmitter's low-pass filter "in reverse". In lieu of i.f. filtering, a low-pass audio filter is provided with three selectable bandwidths: 1088-, 304-, and 277-Hz. An RIT circuit allows plus or minus 1.5-KHz. shift. The front panel contains four knobs and a push-button: a.f. gain, filter selector switch, tuning, RIT, and the "SPOT" push-button that allows zero-beating.

The reviewer found that the unit in its case is very solid. It holds its frequency while being subjected to shaking and hitting. The bandspread and stability are such that he found it possible to monitor AMTOR and PACTOR with ease. Full break-in keying is provided.

Title>PR3:SGC Inc. Model SG-230 "Smartuner" Automatic Antenna Tuner
Author>Bauer, Jeff - WA1MBK
Source>QST Nov 93, pp. 80-81
Abstract>An automatic antenna tuner, with very broad range, tunes by relay-switching capacitors and inductors according to settings in non-volatile memory, hence operates very rapidly.

Digest>This unit is an automatic antenna tuner that can be used with any transmitter over a power range of 10- to 150-watts PEP. It can tune almost any antenna, hence its range is very much broader than the automatic antenna tuners supplied with most modern transceivers.

In principle, its operation is very simple and straightforward. It is a classic pi-network, or series-ell network tuner. R.f. power from the transmitter is fed to the tuner; an internal directional coupler measures the reflected power and feeds the information to a self-contained microprocessor.

The microprocessor, operating a program stored in "firmware", calculates the tuner configuration most appropriate and sets up the network by switching one of six input capacitors, one of eight inductors, and one of five output capacitors, by actuating relays. With no motors required to turn capacitors and/or variable inductors, tuning is very rapid. When it is complete, the settings are stored in a non-volatile memory which, over time, builds a table of values. As the table fills, the time required to retune drops to milliseconds!

The reviewer's final summary states: "Although it is a bit pricey, the SGC-230 will match a variety of random-length radiators and is a good choice for mobile, marine, or "stealth" home antenna systems.

HINTS AND KINKS pp. 82-83
conductor: David Newkirk, WJ1Z
Sr. Asst Technical Editor

Title>HK1:Ten-Minute ID Timer Revisited
Author>Conklin, John - WD0O
Source>QST Nov 93, p. 82
Abstract>Update of design of a 10-minute timer made in 1991 to use currently-available components.

Digest>In 1991, the writer designed an electronic 10-minute timer to "beep" in reminder of the 10-minute identification rule. It was published in HINTS AND KINKS in February, 1991. Unfortunately, the timer IC that the system used is no longer made. In this letter, he offers an updated version.

A complete wiring diagram is shown, along with a list of all parts required.

Title>HK2:Curing Multi-Mode Communications Processor Distortion With the Kenwood TS-850S
Author>Frost, Julian - KC6NSE
Source>QST Nov 93, p. 82
Abstract>A simple adjustment to correct a problem with the TS-850S.

Owners of the Kenwood TS-850S have reported that, when a multimode communications processor was connected to the accessory connector on the back of the '850, all digital mode and sideband transmissions from the transceiver became badly distorted.

It was discovered that the problem can be fixed if the transceiver's "VR-18" trimmer is adjusted until the SSB distortion disappears.

Title>HK3:How to Connect an ICOM SM-8 Mike to the Yaesu FT-990
Author>Grandison, Earle - K6WS
Source>QST Nov 93, pp. 82-83
Abstract>Adapting an ICOM microphone to use with the Yaesu transceiver.

Digest>The writer wanted to use his ICOM mike with the Yaesu transceiver, but found that the microphone requires a +8.0-volt supply and the transceiver's mic-jack does not supply voltage. So he built a box containing an 8-volt regulator and filter to connect with the main power supply of 13.8 volts. He also indicates that a 9-volt battery could be substituted. A wiring diagram with plug and socket connections is included with the letter.

Title>HK4:Inductance of Small Coils Wound on Machine Screws
Author>Zinder, Dave - W7PMD
Source>QST Nov 93, p. 83
Abstract>A table of values of inductance achieved by winding wire around

the threads of machine screws of various sizes.

Digest>Mr. Zinder provides a very handy table of values which tabulates the inductance in micro-henries of small coils wound on the threads of machine screws as coil forms. The table includes coils of 1- through 6-turns wound on screw sizes from 6-32 to 7/16-14, as follows:

Screw Size 1 2 3 4 5 6
6-32 0.016 0.024 0.032 0.044 0.058 0.062
10-24 0.017 0.028 0.043 0.057 0.072 0.088
1/4-20 0.021 0.035 0.055 0.077 0.095 0.121
5/16-18 0.022 0.044 0.067 0.096 0.123 0.158
3/8-16 0.026 0.052 0.083 0.118 0.152 0.201
7/16-14 0.030 0.061 0.098 0.143 0.199 0.240

The writer uses No. 20 bell wire for most of his coils, but for the 6-32 coils he uses No. 26 wire-wrap wire with the insulation stripped off. He finds the 10-24 and 1/4-20 coils to be most useful.

He advises that the coil be wound on the screw and left on it while being soldered in place. Then the screw is simply unscrewed and backed out of the coil. He advises that the screw to be used as a form should be 3-inches long so that it can be supported while one is soldering the coil. Keep the coil near the screw's end so that unscrewing it does not require so many turns!

Title>HK5:Keep Your QST Binders in Shape
Author>D'Antonio, Louis - WA2CBZ
Source>QST Nov 93, p. 83
Abstract>How to stop QST binders from sagging out of shape.

The writer advises that, to prevent the QST binders from sagging out of shape when full of magazines, a paperback book be inserted just inside the front and back covers of the binders.

TECHNICAL CORRESPONDENCE
conductor: Paul Pagel, N1FB
Associate Technical Editor

Title>TC1:Yaesu FT-990 Computer-Control Interface
Author>Lemmon, Paul S. - WD4BNO
Source>QST Nov 93, p. 84
Abstract>Modifying a circuit described in QST Feb 93 for use with the Yaesu FT-990 transceiver.

Digest>The writer comments about an article by W. Blackburn: "Everything You Always Wanted to Know About Hardware for Computer-Controlling Modern Radios" in QST, February, 1993. Mr. Blackburn's article recommended a circuit which used a pull-up resistor, whereas the Yaesu FT-990 requires a pull-down resistor, at a certain point in the

system. His cure for Yaesu owners is to eliminate one resistor in the circuit.

Title>TC2:No Ions in the Cold, Cold Ground
Author>Jones, Steven - KQ4WB
Source>QST Nov 93, p. 84
Abstract>Describes the reason that frozen soil has very low conductivity.

Digest>Mr. Jones responds to a letter from Roy Lewallen, W7EL, about the low ground conductivity that develops when the ground freezes to an appreciable depth. He advises that water content enhances soil conductivity because of ion migration, not because of metallic conductors in the soil.

Title>TC3:Small Antenna Efficiency
Author>Lewallen, Roy - W7EL
Source>QST Nov 93, p. 84
Abstract>Transmitting loop antennas described by Newkirk in QST Jul 93 are VERY inefficient.

Digest>Mr. Lewallen comments about the article on small loop antennas, titled: "Honey, I Shrunk the Antenna!", by Rod Newkirk, W9BRD, printed in the July, 1993 issue of QST. The original article described multi-turn loops built with a tuning capacitor, or capacitors, in each loop. The author then went on to report surprisingly good on-the-air results using these antennas.

In this letter, Mr. Lewallen points out how inefficient the loops that Mr. Newkirk described actually were. Using antenna analysis software, he calculated the loss due to the resistance in the copper wire only, not even considering the losses in capacitor dielectrics, leaky insulation, and other inefficiencies.

His calculations indicated that the first antenna described by Mr. Newkirk, on 40-meters, had an efficiency of only 3.8 percent, meaning that 96.2 percent of the power was dissipated in the copper. When the antenna was tuned to 80-meters, the efficiency became 0.64 percent and copper loss was 99.36 percent of the input power. Finally, when a fourth turn was added and the new configuration tuned for the 160-meter band, the efficiency dropped to 0.07 percent, thus 99.93 percent of the power heated the copper wire!

When the antenna was reduced to only 2-turns and tuned for the 20-meter band, the efficiency rose to 20 percent, and "only" 80 percent of the power was lost to heat.

Title>TC4:More on "Hands-Off Mobile Operation"
Author>Wilson, George - W1OLP
Source>QST Nov 93, p. 84

Abstract>Comments regarding the subject article by Hickox in QST Apr 90.

Digest>Mr. Wilson responds to an article by Bill Hickox, K5BDZ, in the April, 1990 QST. His comments have to do with certain plug connections on several ICOM transceivers, and also the use of ferrite beads to cure r.f. feedback in certain other transceivers.

FEEDBACK (FB)

Title>FB1:"A Unified Approach to the Design of Crystal Ladder Filters" QST May, 1982
Author>Hayward, Wes - W7ZOI
Source>QST Nov 93, p. 81
Abstract>In the referenced article: In Table 1, under the heading: "Normalized k and q Values for a Butterworth Response Without Predistortion", the value given for N=4, k23 is shown as 0.4512. That is in error; the correct value is 0.5412.

THE NEW HAM COMPANION (NHC)

THE NEW HAM COMPANION is a section in every QST, devoted to articles of primary interest to newcomers to ham radio.

Title>NHC1:Remedial Radio
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Nov 93, p. 64
Abstract>Rules of etiquette for ham operation.

Digest>Mr. Kleinschmidt discusses the various kinds of rude or inconsiderate behavior on the ham bands by a tiny minority of hams. Then he outlines a series of simple, self-imposed rules of etiquette which, if followed, will insure that the ham bands will continue to be pleasant places to "gather".

Title>NHC2:Trouble-Shooting Your Radio Equipment
Author>Ricker, Harry - KC3MX
Source>QST Nov 93, pp. 65-66
Abstract>"First Echelon Maintenance" for one's own ham gear.

Digest>The author describes a number of steps that every ham should follow in case of a malfunction in their station equipment. Anyone can perform what the U.S. Army used to call "First Echelon Maintenance" which will solve the great majority of problems that arise. He states the "three ironies of trouble-shooting":

"The first irony: Whenever you are absolutely certain that you have correctly guessed the cause of a failure, you will be wrong.

"The second irony: Whenever you believe that an expensive, hard-to-find component is the cause of your failure, you will be wrong.

"The third irony: The amount of effort required to replace a component is inversely proportional to the probability that it has failed."

The entire gist of the article is that many people panic when something goes wrong and assume the worst. Many will pack up a piece of equipment and carry it, or ship it, to the repair station when, if they had taken the time to think through the problem and perform a few simple tests, they would have been able to correct it themselves.

Title>NHC3:The Doctor is IN
Author>Various
Source>QST Nov 93, p. 67
Abstract>Questions and answers for newcomers to ham radio.

Digest>This is a regular monthly column in THE NEW HAM COMPANION, in the form of questions and answers often asked by newcomers. This month, the questions discussed dealt with keeping call signs when moving to a different call area; the difference between DRAMS and SIMMS in computer memory; seeing the Russian "Mir" space station with the naked eye; whether Coordinated Universal Time (UTC) changes for Daylight Saving time; the correct formula for a half-wave dipole at VHF; and grounding problems.

Title>NHC4:The ARRL Wants YOU!
Author>Hurder, Luck - KY1T
Source>QST Nov 93, pp. 68-69
Abstract>Description of the ARRL Field Organization

Digest>Mr. Hurder explains what comprises the ARRL Field Organization and describes many of the activities it encompasses. He urges ham to make their stations official parts of the organization.

Title>NHC5:You Have a Date With Oscar 21
Author>Ford, Steve - WB8IMY
Source>QST Nov 93, pp. 70-71
Abstract>How to use the Oscar 21 satellite for communication.

Digest>Mr. Ford describes Oscar 21, which is physically a small electronics module "hitchhiking" aboard a Russian satellite. It is in polar orbit, so passes overhead twice each day, everywhere on earth. He describes its operations and explains how to listen to it and how to communicate with it.

Title>NHC6:I Wonder If...
Author>Huston, Jack - W0JAW

Source>QST Nov 93, pp. 72-74
Abstract>Construction of a controller to protect mobile gear from damage due to power surges caused by the starter motor.

Digest>This is a construction article that describes how to build a controller that protects mobile equipment from damage caused by power surges that may occur when the car is being started. Included are a complete wiring diagram, parts list including suggestions as to where components can be bought, and instructions for construction.

RADIO TIPS (RT)

Radio Tips are short items that are scattered through THE NEW HAM COMPANION section and address subjects of interest to newcomers.

Title>RT1:D.C. Power Supplies
Author>Ford, Steve - WB8IMY
Source>QST Nov 93, p. 74
Abstract>

Digest>This is a description of the operation of a typical 12-volt d.c. power supply which draws power from the 120-volt, 60-Hz. mains and delivers 12-volts stable d.c. power. He describes how it works and what to look for when shopping to buy one.

GENERAL INTEREST ARTICLES

Title>GI1:Amateur Radio Aboard Space Shuttles
Author>White, Rosalie - WA1STO
Source>QST Nov 93, pp. 22-26
Abstract>History of ham operation on space shuttles.

Digest>This year marks the tenth anniversary of the first radio amateur aboard a space shuttle. That occurred in November, 1983 when Owen Garriott, W5LFL, operated a 2-meter handheld transceiver with an antenna in the window of the ship's cabin. Ham activities were carried on on several subsequent flights until the CHALLENGER tragedy in January, 1986. When shuttle operations began again after the two-year hiatus, NASA cancelled all amateur activities.

After strenuous efforts by ARRL personnel, NASA finally became convinced of the value of amateur radio in space and a shuttle amateur radio experiment (SAREX) was added to mission STS-35 on December 1, 1990. In April, 1991, the first all-ham space shuttle crew flew after pilot Ken Cameron, KB5AWP, convinced all the others to earn a license.

Title>GI2:Hello Again, to an Old Friend
Author>Brady-Ciampa, Bart - N7NJL
Source>QST Nov 93, p. 30
Abstract>Nostalgia.

The author tells the story of a National NC-240-D receiver that he bought from another ham in 1958, when he was 16-years old. The old receiver was left in storage at his parents' home for many years while Mr. Brady-Ciampa continued his ham activities with modern solid-state gear. Recently, he reclaimed the old receiver and took it to his present home for reasons of nostalgia.

When he again looked at the owner's manual, he noticed the name and call letters of the man from whom he had bought it 40-years earlier. He placed a call to the address shown in the call book and re-established contact with the original owner. Since then, they have exchanged many pleasant reminiscences.

Title>GI3:The Coming of the Law
Author>Newkirk, David - WJ1Z
Source>QST Nov 93, pp. 47-49
Abstract>Early history of laws regarding amateur radio.

Digest>This is an historical article regarding the state of radio regulations during the years between 1902 and mid-1912. When the Radio Act of 1912 was passed, it contained a provision that many, perhaps including the drafters of the bill, thought would abolish amateur radio! That was, that amateurs were restricted to operation at shorter waves than 200-meters.

Ironically, by specifically not abolishing amateur radio, the bill assured the survival of amateur radio. Shortly after its passage, the ARRL came into being and the rest of the story is reasonably well known to most amateurs.

Title>GI4:Solder to Talk
Author>Nichols, Eric P. - KL7AC
Source>QST Nov 93, p. 52
Abstract>Fiction: a parody on ham "old-timers".

Digest>This is a parody on ham "old-timers" who mourn the passing of "the good old days" when radio was radio. The author tells of meeting a fictional ham who had a shack full of refrigerator-size tube-type radio gear. To transmit, he used a large soldering iron, plunged it into a can of flux, and soldered two heavy-gauge dangling wires together. When the hot iron caused blue smoke to rise from the flux, he breathed deeply and exclaimed: "Aaahhh, the smell of radio!"

Title>GI5:Hamming on the "Sunny Side of the Alps"
Author>Sumner, David - K1ZZ
Source>QST Nov 93, pp. 53-54
Abstract>Amateur radio in post-communist Slovenia.

Digest>Mr. Sumner recently visited Ljubljana, the capital of Slovenia, where he met his counterparts at the Association of Radio Amateurs of Slovenia (ZRS). That is the English translation of the name in the

Slovenian language and "ZRS" is its abbreviation. In this article, he reports what he found, how he was treated, and how he, his wife, and daughter enjoyed their visit.

In short, ham radio is thriving in Slovenia. Actually, there are more hams per capita in Slovenia than there are in the USA! The Sumners were treated royally, and thoroughly enjoyed the trip.

As for the their impression of the country, it is beautiful. In spite of the fact that terrible civil war is going on in Bosnia-Herzogovina, only about 100-miles away, and that all the other component parts of the old nation of Yuguslavia are armed to the teeth and living in a state of deprivation, Slovenia is peaceful, prosperous, and happy.

Under the previous communist regime, only members of approved radio clubs could become licensed hams. The ZRS was part of the Yugoslavian National Radio Club which was closely controlled by the government. Now the controls are much looser and new laws are expected to go into effect soon. They will make a radio license an individual matter and membership in a club no more compulsory than that of the ARRL.

Title>GI6:The Australian Connection
Author>Prudhomme, Alice - KG5ZZ
Source>QST Nov 93, pp. 55-56
Abstract>Long-distance friendship via ham radio.

Digest>This is a story of a friendship that developed between the author, a resident of Louisiana, and Clint Maile, VK2ACM, a native of Sydney, Australia. After having many chats on the air, Mr. Maile and a friend visited Louisiana and had many pleasant "eyeball QSOs". This is a report of the visit.

Title>GI7:Sweepstakes Shack on Wheels
Author>indquist, Rick - KX4V/M
Source>QST Nov 93, pp. 57-58
Abstract>Operating Sweepstakes from a parked automobile.

Digest>The author decided to operate in the 1992 ARRL CW Sweepstakes from his automobile so that he could do it from a relatively rare section. He selected a spot in the parking lot of a motel in Ghent, West Virginia, at elevation 3000-feet plus. The operation was successful and he finished third in the West Virginia section with 64,500 points.

He provides a series of recommendations for anyone who might want to do something similar:

1. Be sure the automobile exhaust system is in perfect condition and that exhaust fumes will not penetrate into the passenger compartment while the engine is running.

2. Make sure the battery is in top condition.

3. Plan for unusual weather, breakdowns, and "munchies".

4. Before leaving, test the rig on all the bands where operation is planned.

5. Take along an SWR meter and, perhaps, an antenna coupler.

6. Get a motel room with a decent restaurant nearby so as to get a good night's sleep during the contest.

7. Leave the six-packs at home.

8. Select a spot away from buildings and utility lines.

9. Run the rig at less than full power to maximize time between periods that the engine must be run to recharge the battery.

10. Provide adequate light. The author used a neon-tube trouble light that drew 8-watts.

11. Take along a portable receiver to monitor your own signal periodically.

12. Use headphones and keep the log on a laptop computer, don't try to log on paper.

13. Have your ham license and driver's license handy. Authorities will probably become curious to know what you are doing.

Title>GI8:Satellites and Field Day
Author>Ford, Steve - WB8IMY
Source>QST Nov 93, pp. 59-60
Abstract>Using satellites for Field Day communication.

Digest>During the 1993 Field Day, Mr. Ford, ARRL Assistant Technical Editor, and Luck Hurder, KY1T, ARRL Deputy Field Service Manager, put the W1AW satellite station on the air. This is a report of their experiences and conditions that existed on the satellites during that event.

Mr. Ford reports that Oscar 13 was not in a good position during the contest, so they concentrated their efforts on Oscars 20 and 21, and RS-10. When the activities actually began, they did make numbers of contacts on Oscar 13 and 21, but most of the activity was on Oscar 20 and RS-10.

In the remainder of the article, Mr. Ford invited several other hams to relate their experiences in the same activity.

Title>GI9:How Does a Section Manager Spend Field Day?
Author>Bowles, Chester S. - AA1EX
Source>QST Nov 93, p. 61

Abstract>A Section Manager is very busy throughout Field Day.

Digest>The writer logged the activities of New Hampshire Section Manager, Al Shuman, N1FIK, on Field Day, 1993 from 6:00 a.m. Saturday until Sunday evening. He drove 364 miles on Saturday and visited 7 clubs. On Sunday, he visited 5 clubs and drove 170 miles. The totals for the weekend were 12 visits, 534 miles, and 25 hours.

Most recently the FCC has affirmed that the repeater operator has the right
to say who uses the repeater. If you jammers are such jerks that the
operator doesn't want you using his machine, he can boot you off even an
open repeater.

Hello everybody !

Thanks for your helping answers. I finally got a filter (in France) - 10.7 MHz with 2.2 kHz bandwith. It went with the lateral Xtals (10.6985 MHz in my case). But I have taken note of the different addresses you gave me.

The choice of the 10.7 MHz IF is not innocent. I am aware that one of the problem when using packet radio is PLL locking time between RX and TX. It takes about 200 ms, if your step is really small. By using a 10.7 MHz IF for both TX and RX, I completly eliminate this problem, since the PLL remains on the same frequency. I can also use a very cheap ceramic filter to filter the FM.
I know little about helicoidal filters, so I d be pretty interested in knowing more. Also, I d like to know what frequency swing you can expect from a Xtal oscillator modulated by a varicap diode.

Many thanks again ! And 73 from F1RCS, Vince, QTH : Paris.

Oh BTW,

: Have you considered a phasing sideband generator?

Yes. BF shifter is a bit complex. Unless using a FIR to implement the Hilbert filter.

I have one and the auto notch and bp filters do a nice job. But it's
just another audio filter. I think the radio's I.F. filters are more
affective. The R.S. noise reduction feature doesn't even work!

Most filter boxes (ie Timewave, JPS, MFJ) uses the LMS adaptive filter
to reduce backgroud noise. I was un-impressed with the RS DSP noise
reduction performance.

I use it for a mobile speaker for my scanner or 2 meter handheld.

3069. Yaesu FT-530 Microphone Prob

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-31 12:37:19 UTC
From: jwdxt@csn.org
Message-ID: <Cqo327.H8r@csn.org>
Source record: 265999

I have a 3 week old FT-530 with the display mike accessory. I am very impressed with the radio but the mike is giving me problems. If I use the mike, my signal strength is about the same but everyone says it sounds like I wrapped the mike in a towel - low audio strength.

I posted this problem here about a week ago, and two or more responses came back with a recommended mod, but it doesn't seem to help. Opening the mike reveals that the main speaker has plenty of room and ventilation, but the actual microphone is virtually encapsulated in a separate compartment. The mod was to drill about a 1/16 inch hole in the front cover where the mike is. This made sense but didn't help. I may have been a litle conservative on the hole size, but since there was no apparent improvement, I'm a little hesitant to go further. Does anybody have any suggestions? I have a friend with the same radio/mike combo, and his has the same problem. I'm sure there must be more info out there about this.

Thank you very much.

YES, these people still exist. One is Dick Moen, N7RO, who runs a
DX QSL'ing service from Washington state. For something like $2.00
for seven cards, he waits until he gets a bunch of cards for some
particular station overseas, and then mails them out. It's a pretty
good deal - kind of like a DX clearing house for those DX who aren't
reachable through the bureaus.

If anyone wants any information, I'm pretty sure I have this on my
wall at home. Just let me know.

: someone who is selling an Icom 551D, he wants $550 which seems a little high to
: me. Is that a good price? Anything else you could share will be most
: appreciated. I have tried to find books on 6 meters but so far no luck.

Prices for VHF SSB/CW equipment tend to be on the high side.

Perhaps the biggest factor is the technology--your typical 25 watt
radio has to be 100 times cleaner in terms of spectral purity than
a similar HF radio. Thus, you could just "move" a cheap 10 meter
rig to 6 meters--wouldn't meet FCC requirements. The stricter
regulations are probably justified--we don't want amateur radios
clobbering nearby services on VHF (I don't think the problem is
quite as serious on HF).

True, FM equipment is more reasonably priced, but FM transmitters
generate signals more inexpensively, essentially just frequency shifting
an oscillator. Current SSB/CW gear does it by generating SSB at a
fixed frequency, and then moving it to the desired frequency. This
requires expensive filters to get rid of unwanted frequencies generated
in the translation process.

Yes, there is another way of doing this--the phasing method, but no
amateur manufacturer that I know of generates SSB this way. I hope
to get my 6 meter phasing rig finished in time for the contest... from
FN33JC, Mt Equinox VT. Based on R. Campbell, Jan, April, May 1993
QST, no boards available right now but keep your fingers crossed...

BTW, there is usually a good opening just before or after the contest!

Queens University Belfast has a club station,
we got a HF rig just this year and hopefully next term
(beginning September 27) we will be on air, perhaps even with
the club prefix GN- (prefix hunters watch out!)

the club is over for this term, we are into exams and
in a week and a halfs time we finish term for the summer.
perhaps next term we can QSO some of you....

Jose, I will mail you further info on the club if I
can; but I think all the members have gone home :-)

Everybody else, If you want a contact with the station next
term, mail me, we shall see what can be done. At the moment the
only access to the club is Tuesday evenings, but perhaps during
next term we can get better access, who knows.

But Mr. Buffington isn't proposing any balance--reasonable or otherwise:
"If you aren't open, you aren't coordinated."

It sounds like he wants to throw out twenty years of legitimate coordination because =he= doesn't like it. Let's not loose sight of the fact the FCC explicitly permits closed repeaters.

Sounds like a simple case of the "have nots" wanting to throw out the "haves."

3075. Routing 12v power into 94 Dodge Caravan

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-31 14:33:28 UTC
From: sufana@ceco.ceco.com
Message-ID: <Cqo8Fs.LBH@ceco.ceco.com>
Source record: 265983

As anyone figured out a good location to bring 12 volt power into the cabin area of a 94 Dodge Caravan. I used to run 2 mtr and HF in my 87 Caravan and had no problem bringing 12 volt cables in thru the firewall, but this new Caravan is really packed.

Thanks in advance.

73,

Charlie AJ9N sufana@ceco.ceco.com

3076. Alinco DJ180T mods?

I hope this isn't a FAQ that I have just missed, but here goes anyway...

Although I see many mods listed in various FTP sites for Alinco 160's and 162's, I never see any for the DJ180T. Are the mods the same for the 180 as for the 160? Where can I find mods for the 180? I have heard that one of the mods will make wideband recieve go even wider than the 130-174 range. Help!

3077. Air Show, June 5, North of Boston

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-31 15:32:30 UTC
From: rbono@cosmos.nectech.com
Message-ID: <2sflae$a6t@cosmos.nectech.com>
Source record: 266071
Cross-posted to: ne.general,rec.aviation.misc,rec.radio.amateur.misc

If you enjoy aircraft of any type, or even wonder what this is all about, don't miss this event! This is a *lot* of fun for everyone. Last year's event was a huge success. Many enjoyed it as much as any full scale airshow. Typically there are more than sixty aircraft in attendance. This year we have some new events designed to please the audience even more than last year. We are not talking about flying toy's here. Last year we had some aircraft with eight foot (yes, 8 feet) wingspans. Yes they were flying, and saying that they were aerobatic would be putting it mildly!

*****

THE NH FLYING TIGERS R/C CLUB SIXTH ANNUAL RADIO CONTROLLED MODEL AIRSHOW

Located in Derry/Londonderry New Hampshire

Featuring flying and static displays of radio controlled models.

Sunday, June 5th

Flying begins at 10:00 am

Spectators are welcome

Food and refreshments available

One new ready to fly R/C
airplane will be raffled off!

(bad weather date is Sunday, June 12th)

100% of the fifty cent gate admission
goes to the local United Way

Directions: From the North or South take I-93 to exit 5 in New Hampshire. Head southeast (turn right if coming from the South, left if coming from the North) on Rout 28 for 2.7 miles until you pass Walmart. Take the next street on your right ("A" street) and follow the signs to the event.

For more information call Ken at (603) 432-7345 (evenings and weekends)

chapitre 9 "Helical filters" . c'est le tome definitif pour le dessein
mathematique des filtres.

Also, I d like to know what frequency swing you can expect from a Xtal
: oscillator modulated by a varicap diode.

(sorry, my French isn't adequate for this part..)

It depends a lot on the frequency, the circuit, and production
tolerences. With care a 200 ppm (parts per million) tuning range can be
reasonably reliably achieved for a favourable frequency and circuit.

beware that overtone crystals are far far harder to pull. In general
terms, if you have two crystals at the same frequency, the overtone one
will give a swing reduced by a factor roughly equal to the square of its
overtone number.

Example:

A 25 MHz fundamental crystal in an oscillator circuit with a swing
of 100 ppm. replace the crystal with one with its third overtone at 25
MHz, and you'll get about 100/(3^2) = 11 ppm swing ! (very roughly!)

If the tuning range is important, use a funamental crystal at a
suitable frequency, and use frequency multipliers.

Beware of attempts to pull an oscillator too far, you'll suffer from
temperature dependant failure to start, etc etc.

Bon chance

I agree completely, Jeff. The other reason I often do it is that most folks I know and talk with often have dual band (2m and 440) rigs, and it's nice to know where that voice you just heard came from. There's nothing more embarrassing than hearing someone on the radio you want to chat with, grabbing the microphone and calling them, only to find you left your rig on the *other* band. :-)

I also chat with my wife on the way home from work, and we have "designated" frequencies....usually a 440 repeater frequency and a 2m simplex frequency that we use when I close enough to home. Announcing the band in some fashion is nearly mandatory, unless she happens to be staring at the raio when I call.

Regards all,

Danny

Most of the repeaters on all bands in SoCal are PL (subaudible tone)
squelched, yet most are still open. They are that way because there
are NO clear channels; every single pair is shared with another
repeater somewhere and the tone squelch helps cut down on people keying
repeaters they don't intend to use. Do not make the mistake of
thinking that just because the repeater requires a tone, it is closed.
Check the repeater guides available at any local ham radio store.

However, the majority of the systems to be found on the 440 band in
SoCal ARE closed, as by longstanding areawide agreement, that's the
band where closed repeaters are to be located. In this way, people who
are not invited on one or more closed repeaters can save themselves the
cost and hassle of investing in equipment for that band.

It seems to me that's a workable compromise. Closed systems are legal
and fully supported by the FCC; by balkanizing them to a band by
themselves they are removed to a place where they should not annoy
people. This was done long before 440 radios where available at ham
radio stores, and long before most of you discovered the world above
30 MHz. Certainly it was done long before the ARRL arrogated band
planning to itself in the late seventies.

The SoCal 2m, 220, and 1200 MHz bands contain a number (a majority, in
the first two cases) of open repeaters. Enough, in fact, that every
repeater pair has at least two systems on it, and often more.

There are a few open systems on 440 - there are three of them here in
San Diego alone, and they are not at all busy - which a visitor using
440 equipment could easily use. Again, they are tone squelch for
interference avoidance, not because they're closed. I wonder if part of
the problem is that SoCal uses a low-in/high-out scheme (which works
better in our area because of the extremely high density of commercial
systems on the 450-470 band), and thus visitors to the area don't
hear much of anything on the band because they're listening in the
wrong half!

I do not see why people would go out and buy equipment for a place
where they aren't welcome. This is, perhaps, mostly the fault of the
ham radio stores; they don't tell people that the dual-band x/440
radios are really only useful if you are invited on one of the closed

systems on 440. Luckily, manufacturers are now selling 2m/220 and
2m/220/1200 radios which should be much more popular.

For 12V power in my '91 Voyager (same as a '91 Caravan) I went to a
reputable car stereo shop and had them do the 12V power runs for me.

Since these folks do so many installations I figured they'd know the best
way to route the cables. I'm quite pleased with their work, and will
likely do the same with future cars (unless there are obvious places to
go through the firewall).

An added bonus of this is that my dealer said that work done by reputible
car stereo shops does not void the car's warranty, but work by the car
owner sometimes can. I figured better safe than sorry!

They installed fuses right at the battery on both the hot and ground
leads (as per my request), and gave me two "drops" in the interior -- one
behind the dash "console" and one on the drivers side at the place where
the rear seat can be mounted.

They did a clean, neat job, and charged about $40. All things
considered, I think it was well worth it.

You all really extrapolate on that jamming word. :-)

By jamming, I mean the unauthorized use of a closed repeater, not
malicious interference. Maybe I need to think of a better word
for it, but when a bunch of us attack a closed repeater with rapid-fire
conversation, we call it jamming. We operate legally within Part 97
and the Communications Act of 1934.

Once again, you are really not getting any useful information about
the state of charge, and are asking to destroy something.

>Every radio shack in the world has a little battery checker. The

The reason those battery testers work is because they are intended for
use in zinc-carbon cells (this includes ZC, ZincChloride ZC cells, and
Alkaline ZC MnO2 cells). You need to understand the chemistry of what
is going on inside before applying this technique to other types
of cells such as NiCd.

The chemistry of ZC cells is quite complex, much more so than for
a NiCd. Let us look at the NiCd cell first, as it is the simpler of
the two. In a charged NiCd, the anode is Cd and the cathode is
NiOOH. (simplified) When you discharge the cell, the Cd is oxidized to
Cd(OH)2 and gives up two free electrons for each atom of Cd. The electrons
flow in the circuit and come to the cathode where they reduce the NiOOH
to Ni(OH)2. As the cell discharges, the anode and cathode materials change
from a fully charged to a fully discharged state. At any point
within the discharge cycle, there are two species on each plate, Cd and
Cd(OH)2 on the anode and NiOOH and Ni(OH)2 on the cathode. In both
cases, the discharge product is inactive. Thus, the cell reaction
is governed strictly by the Cd and NiOOH that remains. As long as there
is some amount of Cd and NiOOH left, the cell voltage remains constant
(in theory). THIS IS WHY NiCd CELLS HAVE A FLAT DISCHARGE CURVE.
This is also why they drop like a rock at the end. When the last bit
of active material goes over, there's nothing left to keep the

cell going. Cells are also constructed to have a relatively constant
internal impedance during the discharge cycle -- note that the
electrolyte (KOH) doesn't really take part in the reaction.

In ZC cells, the chemistry isn't quite as simple. The reaction of Zn
going to Zn++ and MnO2 going to MnOOH isn't a one step reaction like
that of the NiCd. At any point in the discharge curve, there may be
two or three compounds that are still electrically active at both
the anode and cathode, and the electrochemical potential between
them varies. What this means is the discharge voltage slowly
drops as the overall activity of the cell is used up. This is the
discharge curve we all know. In addition, the internal impedance
of the cells goes up as the cells are discharged.

These two facts allow the use of a resistor and a voltmeter to determine
state of charge for a ZC cell.

Because the way NiCds work, this method is unreliable as changes in temperature
and cell aging will cause the reading to vary a lot more than several
tens of percent of charge. I suppose that for a given battery, you
could do some experiments and plot discharge voltage vs. charge taken
out of the cell, provided you do it at a fixed temperature and not
too fast.
>
>I GET IT that I shouldn't short my Ampmeter across anything big, (but I

Uh hum.

>
>So, I still don't know how to check a larger, 2-10 Ahmhour battery
>to determine its actual amp-hour. But I do have this little meter
>with a resister, that I ripped out of a recharging unit, that has
>a nice scale that says good/charge.

Do you want to verify its capacity (Ah) or state of charge? Verifying
Ah is easy, especially if you have a digital scope, but simply, just charge
the battery, put a constant current load on it, such that the discharge
current is 1/20 the Ah rating (i.e. 500 mA for a 10Ah battery) and
time how long it takes for it to die. It should run for 20 hours. Any
shorter and the battery isn't up to 100% snuff. If you are impatient and
try to double the discharge current, then you won't get the full capacity,
as batteries are usually rated at the 20Hr rate.

Like I said, state of charge in a NiCd is VERY hard to determine.
Short circuit current will vary more with temperature than with state
of charge. NiCds DO have a slight tilt to their discharge curve, so
like I said, you can characterize a battery to learn its discharge
characterisitics.

I agree that you should load the battery down before testing -- any
cell will give you a good voltage with no load. Put a 20 hr load
on it. But, there is no easy way to convert voltage to state of charge.

>
>And that's why I want to know the amp status of a battery. So I'll

Unauthorized use of private property (in this case, closed repeaters)
may be construed as trespassing or even theft! I hope that you and your
cronies are prepared to pay the price for your "civil disobedience."
Just because you operate "legally" within Part 97 and the Communications
Act of 1934 doesn't mean that you haven't broken any other law. You may
be in violation of civil/criminal codes regarding trespass and the right
to posession of property. Think about it...

Since the FCC has stated that a repeater trustee has the right to
define who may and who may not use his/her repeater, if you operate
on a closed repeater without the permission of the owner you are
in fact violating Part 97.

You're a good example of why we should have caneing in the US.

> systems on 440. Luckily, manufacturers are now selling 2m/220 and
> 2m/220/1200 radios which should be much more popular.

You know, this is a good point which most people don't even think
of. Closed repeaters on 440mhz were the standard in most areas,
because 2m was heavily used and the coordinating bodies wanted to
insure that the open repeaters were coordinated on frequencies which
many people used.

Of course, over time, demographics change. With the demand for dual-
band radios over the past two years, people are able to inexpensively
get on 440mhz. Then they cry FOUL! when they find out that most 440mhz
repeaters are closed. Well, that's tough. Five to ten years ago when
you wanted to set up a closed repeater you were told you had to do it
on 440mhz. So, you make the investment and do it. Now, just because of
the influx of many VHF operators and low-cost equipment you're going to
change the rules, after trustees have spent thousands of dollars, simply
because some people are mad that they can't yack on 440mhz without
joining a repeater group?

As the trustee of a coordinated closed repeater, if anyone told me that I had
a choice to either "open" my machine or loose coordination, I would opt for
choice number three: protect my legal, FCC-recognized closed repeater
coordination via litigation.

If you consult the your handy Amateur Radio Handbook, you will probably
see that you are both right. QTH is a Q signal menaing "what is your
location" or "my location is" The "Q" signals designed to be used
as a question or an answer to a question.

> MD

Nonsense, Mike. Part 97 says only that repeater trustees may restrict access. There is no distinction in the regs between open or closed repeaters. In other words, if someone gets on the frequency, and they happen to activate the repeater, the control op has the option of shutting down the repeater or activating other measures to restrict usage to all but authorized users. This is the meaning of "restrict access", IMO. You may own a repeater, but you don't own a frequency -- and I believe part 97 supports that view, since the only protection repeaters are given is against other uncoordinated repeaters on the same frequency (and malicious interference, of course). The latest edition of part 97 even states that unintended triggering of carrier-operated repeaters by spread spectrum transmissions is not considered interference. If the FCC has ever taken action against hams who were only attempting to use a repeater (non maliciously), I haven't heard of it and would be interested in any actual cases. Note that in the current case in California, the FCC has apparently chosen not to take action so far.
As a repeater trustee myself and an officer for several years of a repeater club, I'd be very interested in any evidence to the contrary.

If you insist on operating a system closed to all but a select few, it's up to you to secure it appropriately. If you took reasonable measures to secure a machine (such as requiring a tone sequence on a control frequency to activate it) you might have a case against unauthorized users. If the repeater is carrier or PL-access, I doubt your arguments, impassioned as they are, cut any mustard with the FCC, since you are not taking any effective measures to restrict access.

Fortunately, here in Colorado we have only a few "closed" machines, although almost all clubs restrict phone patches to members. We deal with the few problem users, and the FCC field office is very cooperative. Even in urban areas (Denver/Boulder) "open" is the general expectation, and it works well. New users try out a range of machines, and usually wind up joining the group(s) that operate the machines they use the most, usually with little or no pressure. Perhaps the fact that our repeater operators have a better attitude than some in California or on the East Coast leads to fewer problems and more cooperation from our local FCC staff.

73,

John, NK0R

EI5HB is the current manager, EI5FT is the former manager, but he
forwards the cards to EI5HB to be answered.

The W6GO list incorrectly listed EI5HC as the manager for a while.
EI5HC has no ties to the EI7M group and didn't forward all the cards
he received.

W6GO currently lists EI5FT as the manager, however, EI7DNB and I are
lobbying to change it to EI5HB.

>

It's not so much for "those DX who aren't reachable through the
bureaus", as it is for DXers who are too lazy to find out the
managers of DX stations they work, or who don't work much DX anyway.

I get packets of 50-100 cards at a time from N7RO, for the various
stations for which I am QSL manager. In every case, these could
have been sent via the ARRL bureau (you can send to domestic stations
who are managers for DX ones). He supplies me with a stamped returned
envelope, sorts the cards by calls (of the DX stations), and you get
the cards back a little faster than by going via the ARRL bureau, since
I wait until I have a few hundred before I mail to the ARRL bureau, but
send his cards back fairly promptly.

Still, in every case, I could be reached direct (costs you 58c a time,
outward and return envelope) or via ARRL bureau (costs you 0c). I would
think his service is mostly useful for those with a small number of cards,
those with no access to a list of QSL managers, and I suppose non-ARRL
members, who can't use their outgoing bureau.

It costs me (or the DX station) a few dollars to send 100 cards at a time
(basic card costs), and he doesn't use any of your dollars to support that,
but then most people don't anyway.

As far as I know, he is the only person doing this, at least he's the only
one I get cards from in this way. Interestingly, I do get batches of a
dozen or more cards at a time sent directl to me from the Czech (OK) bureau,

and I just got 250 HC8N cards sent to me from the Ecuador bureau, for people who didn't know the correct QSL route.

If you want a card for HC8N, HD9N, 9V1YC, WN4KKN/(ZP5, TI4, HC5 or HC8) or ZP0Y (only 1990 and 1991 CQWW-CW contests) send an SASE to me or to me via the ARRL bureau.

Please cite the relevant rule from Part 97 that disallows the use of a closed repeater? My recollection is that it simply allows the repeater owner to disallow the use of his/her equipment, i.e. the repeater owner may turn off the repeater if they choose not to allow outsiders to use the equipment.

The frequency on the other hand is clearly owned by whomever is using it at the time. Part 97 does _not_ grant exclusive use of a frequency to the repeaters owner. The coordination portion of Part 97 only mentions interference to a coordinated repeater from another uncoordinated repeater. That is as close as the FCC goes to granting exclusive use of an amateur frequency.

|>You're a good example of why we should have caneing in the US.

Well many of us feel that you are a prime example of why we should have retroactive abortions. :-)

Also, can this discussion PLEASE move to rec.radio.amateur.policy where such tripe belongs? Thank you.

And after enriching the lawyers to the tune of several thousands or tens of thousands of dollars, you could still lose. The FCC does *not* recognize closed repeater *coordination*. All they recognize is closed repeater *operation*. They recognize coordination status *only* in resolving mutual interference issues without regard to issues of closed or open. The FCC doesn't mandate a particular coordination policy. Coordination policy is a public policy issue internal to the amateur community, made and administered by local amateurs, and courts have traditionally been reluctant to overturn such policies absent a compelling public benefit.

A > "73's" is the contraction for "73 is" as in, "73's a number that ham
A > radio operators use very often."

WRONG! 73 means "Best Regards". 73's obviously therefore must mean
"Best Regardes(es)", neither of which was or is intended to be used
on phone (voice). How people can get a amateur license and continue to
butcher C.W. (continuous wave, meaning using Morse Code *NOT* phone)
prosign is beyond me. This goes for QSL, QTH, and all other "Q"
signals. TRY TALKING ENGLISH. What in the Hell is wrong with that?

I am happy to say that, against my best judgment, I sent a card out to Haiti in March and got a reply yesterday!

The corners were cut off the return envelope (shredded in machine, or maybe the US gov't looking for contraband coming OUT of Haiti?), but the card inside remained totally unharmed, as if the envelope were held by one end while the corners were clipped so as to not damage any of the contents, and then FLIPPED to achieve the same on the other end...

Or maybe it was the Haitian mail system - I have no idea. But it did get through, and if HH2PK never got the $1 bill I included, then he's either awfully nice or awfully wealthy (guess if he's on the radio, he's the latter, eh?) to send me a card anyway, as something like 90% of mail going into Haiti gets opened and pilfered, or something ridiculous like that.

>From other local suburbs, I've heard hams make comments like:
>"Don't say you need a permit for a 'tower' rather 'an
>antenna support structure'. 'Tower' raises red flags
>and leads to trouble."

Whether it is a 'tower', an 'antenna support structure',
or some other euphemism, it remains an accessory structure
for zoning purposes and is regulated as such and will be cited
as a non-conforming accessory use or structure.

>"Be careful when approaching your local government - there
>have been cases where hams have asked about the existance
>of such ordinances and a week later the city council passed
>a new tower restriction that they had never considered."

Check out the actual text of the local zoning
ordinance at the library and at the building department.
Unless there are clear statements regarding antennas, this
is a risk, though a new ordinance is unlikely to move
through in such a short time. Do your homework before
you make noise, and don't be bellicose; you want to make
friends in town hall.

>"Unless there is a DX'er in your town that happens to be a
>good lawyer with lots of time on his hands, don't bother
>putting up a tower you'll have to take down."

And his time isn't free either. And there is no satisfaction-
guaranteed-or-your-money-cheerfully-refunded.

>"Don't ask for permission - it's easier to ask forgiveness!"

You mean "put it up and hope no one notices and hope the one
who does is not the local code enforcement officer or building
inspector." Also hope that you don't have any RFI or neighbor
problems during your stay at that address.

You can try it, but don't sell the gin pole.

>Now I realize that this may be 50% urban folklore and 50% truth
>but comments like these are quite intimidating. Any guidance
>would be appreciated.

>I do know that when we were looking into building a house with one
>of the local builders that put up these big developments (~200

>allowed - period'". The manager equated ham antennas with never
>mowing the lawn, leaving broken/rusting cars in the yard and painting
>the house plaid. This is especially stupid because their big concern
>was "aesthetics" - however, at both of the developments I've been to
>by this builder there were cell-sites (~150' towers) with-in a mile
>of their little Utopia. Needless to say, I told them how dumb this
>was and walked out.

Yup, it's dumb but a) these anti-antenna covenants have become boiler plate that is routinely attached to these sub-divisions b) the builder doesn't care what you think. He has plenty of customers with $$$ that given the choice prefer farm animals and rusted cars on concrete blocks to your disgusting antenna. You need to be clear of both zoning by the town or county and these accursed covenants to get your steel up. Covenants also "run with the land", which means that they are binding on subsequent purchasers of houses in these subdivisions. Make sure your purchase contract has an out should you find one of these nasty things hiding beneath the title documents.

Personal experiences and/or a brief summary of zoning in selected western Chicago burbs available on request

You will find this practice in several countries. I beleive most of the
cards I received this way were European. My understanding is that they
get a cheaper postage rate this way. Unlike the U.S., there are several
outgoing air mail classes.

KI> what you are saying is "What is your what is your QTH?". etc.
KI>
KI> These are the traditions of hame radio. Traditions don't have to make
KI> sense.
KI> They are the things that characterize and identify the hobby. I
KI> believe it is
KI> detrimental to attack these traditions, for you are attacking the
KI> history and
KI> very soul of amateur radio. You must remember that hundreds of
KI> thousands, nay,
KI> millions of your brother amateurs laid the foundation of this great
KI> hobby.

The foundation of the misuse of C.W. prosigns (NOT abbreviations) has only occured in the past 10 years or so when former CB operator's got their Amateur tickets and brought their misused and butchered CB lingo into the hobby. This, BTW, is not a condemnation of the many former CB operators who came on board the hobby and tried to listen to the advice of elmers. Many (most) have been great assets to the hobby. The problem is: when two or more former CB ops get together on the Ham bands, they tend to revert to their old lingo. Just listen to any repeater when two (or more) brand new codeless techs talk to each other.

KI> For those who chastise using CW abbreviations on phone, let me ask:
KI> How
KI> would you call CQ without using a CW abbreviation? How do you talk

CQ is NOT a CW abbreviation. Consult any radio amateurs handbook. "Q" signals (CQ is not a Q signal) are "prosigns" used when operating C.W. to shorten a transmission ON CW! Few, if any, Q signals shorten a VOICE communication. Try, for example, "I'm home" rather than "I'm at the QTH". Amateur prosigns (Q signals) were invented by Amateurs. 10 codes were invented by police and fire departments to keep the radio listening public from understanding the information being conveyed. Most police and fire departments are now reverting to "plain english" because it cannot be misunderstood (don't take my word for it, just listen).

KI> about DX
KI> and DXpeditions without using CW abbreviations? For that matter, how
KI> do you KI> talk about CW without using CW abbreviations? See my
point?

Sorry, I don't. Perhaps you could give me an example. I suspect you
will have to use "plain english" to do so.

| Do all of your repeaters sound alike? Don't they have different courtesy beeps
| or ids that can distinguish them?

A few of the repeaters around here have courtesy beeps, but most don't.
And the repeater id's infrequently enough that you're unlikely to hear
it during the few seconds that someone calls. Maybe I could time the
length of the squelch tail. :-)

David,

I also drive a '93 Saturn (SL2). I decided to bite the bullet and drill
the chassis. I put an NMO mount in the lid to the trunk. It turns out
that if you mount it a little back of the center of the lid, coax feeds
nicely. I routed the coax to the front of the car (under the carpet,
near the moldings). I then took my DR-590T (with remotable head) and
mounted the body near the blower on the passenger side, and routed the
cable up into the space under the dash. I mounted the head and microphone
to the plastic molding which goes around the driver's console and the
air vents. I figure that when it comes time to sell, I will replace the
molding and put a cellular antenna on the NMO ....

Please help. I need information about the Evergreen Intertie, a 2m net that covers several Western states (N. Calif., Oregon, Washington, Idaho, Montana), plus British Columbia and Alberta. The only place I've found this repeater network described is in the ARRL publication Your VHF Companion, but no repeater frequencies are listed. The Evergreen Intertie is not listed in the 1993-94 ARRL Reeater Directory, nor in the Western States Repeater Directory.
Could someone please supply a contact person, address, and telephone number? I will be traveling to the NW next week and moving to the NW in two weeks.
Thanks for helping, Joe (KE6GRS)

AEA also made available some 6 m ssb/cw ht's a while back. The only
real bitch about them is that the vxo could only pull 50khz of band
per xtal times two...not a lot of bandwidth. Mine is setup for 50.1-
50.150 and 50.150-50.200...eh...it's ok, but not great. Oh and the output
is a miserable 2 watts pep...just enuff to drive a cheap homebrew,
MRF455A linear to do 15 watts....which is plenty. These things turn
up ocassionally at the swapmeets...or, try rolling your own! Go buy
a RatShack 49MHz 5 channel 100mW job, now change the pll ref xtal to
run the output at 50.6 on ch A...change the final transistor bias
resistor and you'll be running about 450 mW...not earthshattering,
but lots of fun at Fests and swaps when everyone else is jammed on
146.52 and the like!

The design of something is irrevelant to it's use. The use of radio waves has enabled warfare to be far more devastating than any other invention save perhaps the use of nuclear energy, and even that can be tied into the use of the radio spectrum. Far more lives have been lost due to radio, than to the semi-automatic firearm. Hint... Radio controlled munitions, radio directed battles, radar, ...

The advent of wireless communications has enabled the military to increase the coordination of and increase the effectiveness of battlefield carnage. (BTW... so called "assault rifles" were not designed to kill, but to wound. It's the assumption that a wounded man takes over 5 people out of the battle and a dead one, only takes himself out. They are medium to low powered rifles capable of selective fire... those firearms the clintonistas are after are not assault rifles.

One of the local big-time DXers in our club once told us that it's a good idea to cut the corners of the envelopes expressly so that the postal workers CAN see in the envelope and see that there's nothing in it worth stealing. Supposedly, if they can't see in it and suspect it has money in it they're more likely to cut it open and then throw it away. If they can see there's no $ they're more likely to send it along unmolested. Sounds like maybe it works, at least this time.

Really? What about those years you operated without a license? Are you selecting sections of Part 97 to abide by and rejecting others?

What did your FCC commissioner-friend and communications lawyer-wife think of your unlicensed operations?

Hello. My friend recently purchase Kenwood TH78A and wants to modify
it(extended coverage and 800MHz). Unfortunately, he has to go to another
country and I do not have enough time to find Modification Book for it.
If anyone has it, would you kindly E-Mail the mods to my address, I would
REALLY appreciate it.
Also, I've heard that latest models of TH78A are blocked to 800 MHz band.
Is it true?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 31/2330Z MAY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 31 MAY AND FORECAST UP TO 3 JUNE

IPS Warning 15 was issued on 26 May and is current for
interval 28 May to 7 June.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 069/003

1B. SOLAR FORECAST
01 June 02 June 03 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 070/005

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to minor storm.

Estimated Indices : A K Observed A Index 30 May
Learmonth 25 3435 4344
Fredericksburg 30 35
Planetary 33 44

Observed Kp for 30 May: 5755 4444

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 Jun 35 Unsettled to minor storm.
02 Jun 35 Unsettled to minor storm.
03 Jun 30 Unsettled to minor storm.

2C. MAGNETIC COMMENT
disturbances expected until 7 June due to a coronal hole.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
31 May normal fair-normal fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Jun normal normal-fair fair
02 Jun normal normal-fair fair
03 Jun normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values to 20% depressed,
with spread F observed during local night.

Observed T index for 31 May: 17

Predicted Monthly T Index for May is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
01 Jun 15 Near predicted monthly values to 20% depressed.
02 Jun 15 Near predicted monthly values to 20% depressed.
03 Jun 20 Near predicted monthly values to 15% depressed.

4C. AUSTRALIAN REGION COMMENT
spread F conditions expected during local night.
Degraded HF comms expected until 8 June due to a well positioned
coronal hole.

On my tape, they always pronounced that WHISKEY. :-)

Still, I know what you mean. Years ago, I borrowed some code tapes
from a US Naval Reserve station in Lansing, Michigan (!) while I was
in high school. They were filled with individual characters followed
by a somber baritone:

That was <pause for effect> ALPHA...

The problem was there was really no practice, just individual characters,
so I never did learn the code that way. But I still remember...

That was <pause for effect> BRAVO...

I can't resist sharing an experience with trying to contact the folks on a closed repeater... We discovered W6UE on 445.450 - (pl 100) in the Glendale/NE LA/Pasadena area. It had only a trickle of users and the coverage was perfect for our needs. We called the control operator one evening to ask about using/joining it. This repeater appears to be affiliated with CALTECH, although the repeater guide is useless there. We were told in rather curt terms that no-code techs were not welcome there. (Something about not being able to copy the repeater's ID..) We were nice guys and let that sleeping dog lie there. Makes me wonder what the reaction would be if we started communicating via CW on that repeater. ;-)

I am a candidate for the Wisconsin legislature this fall and (as an Extra who cares about ham radio concerns) would like to prepare a sheet for my district's ham population. What I am interested in is ideas for state laws that hams would appreciate...

Ideas I have so far include:

1) Opposition to scanner/radio bans, etc.
2) Adoption of PRB-1 (with possible revisions) into statutory form (I know about federal preemption, but this would make cases easier for hams...)
3) Developing stronger partnerships between state and ARES/RACES, etc.

Any input (or money <grin>) you could provide would be appreciated!

Well I was agreeing with the sentiment more than the statement. It's not
as simple as you think. The band is ours. We want to use it,
efficiently and fairly. In fact, we'll cooperate with a fair, open
coordination effort eagerly.

However, there is ground to be made up. First, there are too many
"closed" repeaters in relationship to the few "open" ones. The ones that
are open are placed on shared frequencies. There are also far too many
"paper" repeaters.

I just learned today of a renegade open repeater being placed on a
splinter of two paper repeaters. If the system was better administered,
crap like that could be avoided.

>to posession of property. Think about it...

Good points! That is exactly where this issue currently is legally.
The LA 145.22 repeater war/lawsuits are being closely watched by those of
us active in this.

Operating on a closed repeater is not a trespass (at least on a common
law trespass). It is probably a violation of "right to possession" codes.
The owners of a closed repeater are damaged if I use that repeater without
permission. Damages would probably be club dues used for operating expenses.
This is uncharted legal ground, so who knows. For a while we were fishing
for a law suit in order to challenge/define these laws as they pertain to
radio repeater access.

Of course you can avoid all this is you just operate simplex on the repeater
input w/o intent to access the repeater, just use a clear frequency.

Agreed, These laws and the FCC say the repeater
owner has the right to deny access to any station by DPL, turning the
machine off, etc. and that makes perfect sense. None of this is a problem
until you only have 3 open repeaters. You can't put up another open 440
repeater that the community demands because all the closed repeaters are
"coordinated". The greater community is being damaged by the closed repeater
owners and by the coordinating bodies. There is no doubt that as the
ranks swell, more and more pressure will be put on the closed repeaters to
open or make way for open machine. To speed the process up, class action
suits against the owners and coordinating bodies are being considered.

I like the "closed means no coordination" policy several people mentioned.
We should all put pressure on the coordinating bodies to adopt this.
Closed repeaters don't fit the spirit and intent of amateur radio.

What do we do when the bands shrink, the ranks grow, and the number of
closed repeaters increases? Do we just give up on the hobby? Do we operate
only on the 1 or 2 frequencies where we can afford the dues? Should
We really have to be INVITED to operate on the 440 band like Brian Kantor
says? We are dangerously close to this in So. Cal., other cities can't

be far behind.

: Dick Flanagan, W6OLD w6old@n6qmy.#nocal.ca.usa.na
: dick@libelle.com CIS:73672,751 GEnie:FLANAGAN

That's right Dick, OB. 99% of the amateurs in Southern California are the have nots, and the good old boys who have assigned themselves pretty much all of 440 are the haves. And I'm for throwing them out...you have that quite right.

It's a scandal. I mean, there is practically no point in owning a dual band (2m/440) rig in Southern California. Maybe back in the old days, when 440 was exotic and little used, except by pioneers, it made sense to give it away to a few guys. But in this crowded time, with hundreds of new hams getting VHF privileges every month, it makes no sense at all.

The contrast between the wholesome and well-wrought band plan on 2 meters with the desolate desert of 440 in Southern California is stark. It cries out for correction.

SYNOPSIS OF ACTIVITY

Solar activity was very low. The only event for the past
few days was an uncorrelated B4 xray burst at 31/2030UT. The
sun remains spotless.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at unsettled to minor storm. High latitude stations saw periods of major storming. Activity is most likely due to a well positioned coronal hole. Energetic electron flux (GT 2 MeV) ranged from normal to high levels over the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be unsettled to minor storm for the entire forecast period. High latitude stations should expect periods of major, possibly severe, storming during local nighttime.

Event probabilities 01 jun-03 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 01 jun-03 jun

A. Middle Latitudes
Active 20/20/20
Minor Storm 30/30/30
Major-Severe Storm 25/25/25

B. High Latitudes
Active 15/15/15
Minor Storm 30/30/25
Major-Severe Storm 35/35/30

HF propagation conditions were below-normal over most regions (particularly middle to polar latitude paths). Degradation was strongest on transauroral circuits where absorption, fading, multipathing, and associated sporadic-E have been fairly prevalent. Spread-F has also been reported in the polar and auroral regions. Similar conditions are expected to persist over the next 48 to 72 hours, through 03 June inclusive.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Because it was such a small insignificant part of their lives, they didn't
care. If you had a life, you wouldn't either :-). They know I'm a radio
pirate and they still love me. We've had some great discussions about
low-level microbroadcasting, citizen's bands, jamming, and even
the evil's of closed repeaters :-).

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

APOLOGIES.
==========
The operator for the 80 metre transmission of the news last
Sunday (number 810 22/05/94) offers his apologies for the
failure to go to air. It was due to circumstances beyond his
control and it is hoped today will be operated normally. It
is known that most of the 80 metre viewers use this outlet as
a back-up or for interest only, using the 40 or 20 metre or
VKNET Packet distribution to obtain accurate copy, so
hopefully no-one was seriously inconvenienced....

WA storm
========
We have heard that only minor damage has been reported by ama-
teurs from Perth in Tuesday's storms. The major sufferers were
VK6CF who lost a large beam and other antennas, and VK6TN, the
HF Amtor mailbox station lost its long wire, which was
replaced posthaste, leaving the operator with a large load of
timber to turn into firewood -- it was a rather large tree.

In other cases, only tree damage to long wires was reported.
This is good news as the television coverage showed severe
damage which was apparently mostly confined to beachside
suburbs.

There was however an overnight city-wide blackout due to the large number of power lines damaged by falling trees and other debris. This report was received from Clem VK6CW who reported no damage to his installation.

Now we have some news of Syd VK2SG who is recovering, albeit slowly, from his quite debilitating illness. But the colour is fine and Syd is getting around much better and on air every day. Syd should be back to good health before long.

Anarts meeting will be held this coming Friday evening 3rd June. Contact Jim VK2BQS, Col VK2CTD or Pat VK2JPA for further information.

ANARTS Contest
Now we have our contest coming up shortly, so we began to publish the rules last week. You are going to participate, are you not ??

ANARTS WW RTTY/Digital DX Contest 11-12 JUNE Part 2

Contest period: from 0000Z Saturday to 0000Z Monday (48 hours)

Multipliers: each ARRL DXCC country, and each call district of VK, JA, VE, and W count as separate countries on each band. QSOs with ones own country is not valid for multiplier count. (W6 may work W7 or W5 for mult, but no W6). Each continent QSOd counts as a multiplier (maximum of six).

QSO Points: Use Exchange Points Table to determine QSO points. (See the table in the RTTY Journal or apply to ANARTS for a copy).

Scoring: Total QSO points x total multipliers x number of continents worked (max. 6). After the above calculations, world stations add 100 points for each VK QSO on 20M, 200 points for each VK QSO on 15M, 300 points for each QSO on 10M, 400 points for each VK QSO on 40M, and 500 points for each VK QSO on 80M.

Awards: Awards will be issued for 1st, 2nd, and 3rd place on world basis, and also on country basis.

SUMMARY OF ACTIVITY

Solar activity was very low all week.

The geomagnetic field at Learmonth (WA) was quiet 22nd-23rd May, quiet to unsettled 20th-21st, and 24th-26th. There was a brief active period 0900-1200 UT on 26th May.

Ionospheric F2 critical frequencies at Sydney were mostly near predicted values. Enhanced periods of up to 20 per cent were observed during local night on 24th-26th May. Spread F was observed during local night on 21st and 23rd May.

FORECAST FOR THE NEXT WEEK (27 May - 2 June)

SOLAR: Very low.

GEOMAGNETIC: Quiet to unsettled until 29 May, active to minor storm levels thereafter.

IONOSPHERIC: Near normal to 15-20 per cent depressed.

3151. Molokai Island Opertion

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-01 07:10:51 UTC
From: belcher@uhunix.uhcc.Hawaii.Edu
Message-ID: <Pine.3.89.9405312150.A25303-0100000@uhunix3.uhcc.Hawaii.Edu>
Source record: 266015

Following announcement from K7VAY/KH6 is submitted for DXBULLETIN posting:
KALAWAO EXTRAVAGANZA
On June 3, several local amateurs will be heading to Kalawao County on Molokai to operate for several days. Kalawao County is the rarest of the rare in county-hunting circles. The county is comprised of the Kalaupapa Peninsula and is a significant historical location in the State of Hawaii. I'm sure that we all will feel the presence of Father Damien and remember what he had done for the patients there in the early years. Operators as of this writing will be Richard, AH6IO; Al, NH2Z; Ann, AH2CU; and Pat, K7VAY with possible additional operators. We expect to be QRV at approx 0000Z on 4 June and continue until approx 1800z 6 June. For the County Hunters, we will be checking in to the CW and SSB nets on 14056 and 14336 several times
each day. Conditions and antennas permitting, we will also be found on all bands (80 thru 10 meters) either CW or SSB. All operators will use their own callsigns. QSL will be to callbook address with the exception of K7VAY. QSL info for K7VAY is: 99-891 Aumakiki Loop Aiea HI 96701. Every effort will be made to operate in other than the Extra or Advanced Class sub-bands. The propagation forecast is not too favorable but our goal is to do the best we can despite band conditions. If you hear us, please stop by for a contact and a posting on your local Packetcluster would be appreciated. 73 and ALOHA de Pat, K7VAY/KH6.

I have given away this tape on my Ham Radio & More show 4 or 5 times.
I have had many people call and ask for the phone number and find
this tape of interest to them. It is definitely laughed at by many "old time"
cw users, but it can certainly help many.
73,

From: lenwink@indirect.com
Message-ID: <lenwink.37.000873FC@indirect.com>
Source record: 265887

I have been asked by e-mail by many for this list. The list can change at any time. Ham Radio & More is a national listener call-in show, hosted by Len Winkler, KB7LPW. It has aired on the originating station, KFNN, 1510AM, in Phoenix, Az. since 4/21/91. The show has been on the Talk America Network since 11/28/93. The show is on every Sunday at 6:00pm EST. There are guests each week, prize give-a-ways, listener calls, trivia, and more. It's mostly non-heavily technical, and more about the aspects involved in amateur radio, and who is doing what.
In addition to the following stations, the show can be heard via satellite on Spacenet 3, Transponder 9, 6.8 audio.

Hartselle, Al. WHRT, 860am
Decateur, Al. WAJF, 1490am
Phoenix, Az. KFNN, 1510am
Big Bear, Ca. KTOT, 101.7fm
Denver/Boulder, Co. KBCO, 1190am
Hartford/Newington, Ct. WATR, 1320am
Chicago, Il. WKTA, 1330am (tape delay)
Alton, Il. WBGZ, 1570am
South Bend, In. WIWO, 1580am (tape delay)
Huntington, In. WPDJ, 1300am
Orleans, Ma. WKPE, 1170am
Boston, Ma. WSSH, 1510am (50,000 WATTS)
St. Louis, Mo. WBGZ, 1570am
Biloxi, Ms. WVMI, 570am
Fayetteville, Nc. WEEB, 990am
Raleigh, Nc. WCRY, 1460am
Lincoln/Hasting, Ne. KICS, 1550am
Philadelphia, Pa. WIFI, 1460am
Oklahoma City, Ok. WKY, 930am

Any radio station can air the show at absolutely no charge, no contract. Call KFNN, 1510am, for clock information and other details at 602-241-1510.
To get the show aired in your city, have your fellow hams call a local small talk station and tell the program director to air the show. Sending a few FAX's helps, too.

Thanks again & 73,

Len, KB7LPW

3154. contests during 4-5 june

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-01 09:40:08 UTC
From: besten@faculty.chem.ruu.nl
Message-ID: <besten.770463608@faculty.chem.ruu.nl>
Source record: 266021

Note that during the first weekend of june (that'll be within a few days :)
a few contests on 50 MHz will be held simultaneously. Here in Europe
(Region 1) the two most important contests will be the UK6MG contest and
for the first time this year, the IARU 50 MHz contest.
Hopefully wel will experience some trans atlantic multi hop E openings
to the States (from Europe i.e.) and please note that the rules in region 1
require the *complete* locator, i.e. all 6 digits. Whether is this might
be unnecessary on 50 MHz or not please try to acquire the last two letters
of your locator. When we do not copy the last two letters we have to
calculate the closest distance to the grid locator in question.
Mentioning the full locator will also enhance the effectivity of your
(potential) QSO's, it is very likely that some people will ask for your
full locator, and especially in short or minor openings this extra
questions will take extra time and..... *noise*
Please bear in mind that the full locator thing is only needed for the
IARU contest, the UK6MG contest requires the raw grid locator only (and
when you have one, a UK6MG number)

For those of you who still need a few extra countries on 50 MHz from
Europe: QRV will be the JY7SIX expedition, 5B4JE, presumably HV4NAC,
presumably Z32BU (Macedonia), T97M (Bosnia), undoubtedly ISo and
many other european contries as well.

Hope to work you on six,

Remco, PA3FYM

3155. Fancy testing some Macinosh HyperCard software ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-01 09:51:57 UTC
From: sean@g0oanint.demon.co.uk
Message-ID: <21@g0oanint.demon.co.uk>
Source record: 265870

Hello All,

I have just finished a HyperCard Stack that will allow control of a Yaesu FT-747GX.

I now need your help.

I am looking for people that have a Macintosh and a FT-747GX (or perhaps any other Yaesu radio) who can help me beta test this stack.

If you would like to help just let me have an e-mail or street address and I'll send you off a copy.

Kind regards, Sean.

3156. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-01 11:00:18 UTC

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.7 05/28/94 14:31:40
Changes: List now in 2 parts, Ham origin moved to FAQ

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described in the list of Frequently Asked
Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as
one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has historically
spilled over into the mainstream such as was the case with Edwin
Armstrong, who developed the regenerative oscillator and FM radio, or
General Curtis LeMay (W6EZV) who was instrumental in making Single-
Sideband the communications standard for the Strategic Air Command
(1947-1992, now reorganized into a joint command called USSTRATCOM) and
eventually the U.S. Air Force. Although packet-switching techniques
originated from DARPA (Defense Advanced Research Projects Agency) and
the ARPANet, no one can deny the tremendous influence that amateurs
have had in demonstrating the viability of TCP/IP and AX.25
communications via radio links. The efforts of AMSAT (the Amateur
Satellite Corporation), including the development of many ham satellites
and the low-orbiting Microsats (communications satellites no bigger than
a breadbox that use store-and forward packet techniques), have certainly
advanced the state-of-the-art in communications, one of the defined
purposes of the Amateur Radio Service, as recognized by international
treaty.

Since in many cases hams are writing "the book", there is often no
"book" or other established reference for a beginner to refer to.
Traditionally, information has been passed on from ham to ham via word-
of-mouth. Like many of the traditional crafts, a variation of the
Master-Apprentice system has emerged, the Elmer-Novice relationship.
```

Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@unomaha.edu, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-M]" and "Amateur Radio Elmers Resource Directory [N-Z]." Since the list is cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/a-m
send usenet/news.answers/radio/ham-radio/elmers/list/n-z
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use.

(I'd appreciate feedback on whether or not you find them useful,
though.)

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites, all at standard port 70:

cc1.kuleuven.ac.be
jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl

see also comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW site:

URL: http://www.cis.ohio-state.edu:80/hypertext/faq/usenet

under pages:

radio/ham-radio/elmers/admin
radio/ham-radio/elmers/index
radio/ham-radio/elmers/list/a-m
radio/ham-radio/elmers/list/n-z
radio/ham-radio/elmers/diff

see also comp.infosystems.www

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at rtfm.mit.edu (standard port
210) in database "usenet."

see also comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

John Ackerman AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

(See also Bob Nielsen for more information about TAPR)

++

David Andrews ZL2SX

andrews@kai.ee.cit.ac.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

++

Jeff Angus WA6FWI

jangus@skyld.tele.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, soon to replace with Tnet-x1g on one and a PC NOS-switch on the other. And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there.

ampr.org IP Coordinator for California - Los Angeles and San Fernando Valley subnet (44.016.xxx.xxx)

"We're here to help, we don't loan tools" (Just kidding....put me on the list). Monday-Thursday 8 AM to 9 PM Pacific time, Friday 8 am to 5 pm.

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals in amateur radio. The first manual was the DJ-590 and subsequent manuals included the 560,580 and 600 for Alinco. My contacts in the amateur radio community have helped other amateurs to know more about products, hidden features and new product offerings. The BBS will now included the latest info on YEASU and ALINCO products. If you have a product that you wish to have evaluated for the general amateur community, please contact before sending.

If you have questions with regard to customer service at these companies, please forward to me and they will be passed to the company contacts.

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CD-ROM online callbook
with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

I want stories about automotive EMI problems, dealings with dealers,
and, if possible, solutions. I plan to forward these to my contact at
the Society of Automotive Engineers (SAE).

If anyone knows the *right* people at any particular company, I want
to know. I am also pursuing (via the SAE) more official channels.

EMI/RFI Resource List and RFI Tips package available. A business
SASE with 98 cents postage is appreciated. Electronic versions
available soon. Please specify the desired documents in your
correspondence.

The FCC has released the results of a telephone interference survey
just completed.

If you would like a copy of the survey, which includes a list of
telephone models checked, send an SASE with two units of first class
postage to the Technical Information Service at ARRL HQ. Alternatively,
you may obtain an electronic copy from the info server below.

Many amateur radio informational documents (including EMI/RFI files) are
also available from the ARRL info server. Send E-mail to info@arrl.org
with the word "HELP" in the message body.

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to
date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience,
much repeater experience, in addition to a considerable background in
theory, as many here are electrical engineering or computer engineering
students. If a question can not be answered by the readers of the list,
there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local
disabled hams (or hams to be) get on the air. But anyone local who
needed help would find a group at their door ready to work.

++

I'll be glad to help out with tube circuits and VE testing.

Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous ftp as:

mipg.upenn.edu:/pub/yee/rptr010.Z

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and
is not limited to the US. This reflects the intent to make this
directory universal.

Contributions of data may be made by anonymous ftp to
mipg.upenn.edu:/pub/yee/uploads or via email to yee@mipg.upenn.edu.

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

+ jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org
+
+ My primary interests are in packet radio network building (particularly
+ higher speed stuff) and TCP/IP. I've got quite a lot of info on using
+ the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
+ struggling with here.
+
+ TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
+ to discuss issues of regional packet networking (Net-SIG). As a result,
+ the TAPR net-sig mailing list was born, and is now ready for operation.
+
+ This list is <not> intended to replace any of the existing packet-related
+ mailing lists. Its purpose is provide a medium for communications among
+ those interested in packet radio networking, both dealing with technical
+ issues and political/regulatory ones. We'll discuss things like how the
+ potential 219MHz band will fit into the networking picture, how to link
+ areas using different networking schemes, how to set network parameters,
+ etc. The list's charter will be posted there regularly.
+
+ The address of the list is net-sig@tapr.org and you can subscribe by sending
```

```
+ mail to listserv@tapr.org with the text "join netsig".
+
+ Apart from subscribing to the list, you can contact me for further details
+ about the Net-SIG (including upcoming conferences).
+
+ (See also Bob Nielsen for more information about TAPR)

Ten Tec 6 meter transverter kit (1208) for up to 5 Watts in on
20 meters will give you 8 Watts out on 6.

kit $95.00
assembled $159.00

There has been a delay in shipping.

But what about the "closed" systems that have many users? They do exist. You can't simply say "throw out all closed systems". It just doesn't work. There may well be a need for reform in SoCal, but the band belongs to the owners of closed systems just as it belongs to those who want every system to be open.

As a frequency coordinator, you must look at both sides of the issue. Many of the closed systems have been operating for long periods of time without causing problems. A coordinator just can't say "Well, we've changed our policies, and you have to go". They'll get their butts sued off.

The "paper" radios should be decoordinated. There's no coordinator worth his salt who will disagree with this, but you can't expect any coordinator to just see one side of the issue.

Contrary to some operators' beliefs, an open repeater is not "more worthy" of a frequency...in the FCC's eyes or anyone elses. A good coordinator must balance the needs of the existing systems with the desires of new hams who want to put on repeaters. It's not a black and white issue.

Does the xvtr really use the 20m IF? Most use 28 Mc/s so more of the band can be covered, ie 28-30 -> 50-52. Also, is the TT xvtr typical of TT design and quality?

Derek - Laziness has nothing to do with it. Personally, I only chase Mixed and RTTY DXCC. If I work some other modes or some bands, I'll use N7RO cuz I don't want to spend the money on cards I not really chasing, but want cuz some day I may change my mind.

It's not too bad for stateside mgrs, but for the DX mgrs, you're talking $1-2/card rather than about 20 cents.

Even when I send cards thru N7RO I write the mgr's call on the back, to make it easier for him.

Personally, I'm not thrilled with the response rate thru RO. I remember 15-20 years ago when Jesse, W3KT did it, and seemed to have a much better response rate. Maybe it's just the times, when there are pigs/thieves like F6FNU and DJ6SI who want "tips" for their troubles...

3165. Mt. Equinox Vermont special event station

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-01 13:57:42 UTC
From: sas@opus.xyplex.com
Message-ID: <2si44m$55h@xap.xyplex.com>
Source record: 265830

The Wellesley (MA) ARS will operate W1TKZ on HF/VHF/UHF from Mt. Equinox in southern Vermont in the weekend of June 11/12. This is a great chance to add Vermont to your WAS list, or add FN33 to your VUCC grid totals. Because of the date change for this year's ARRL June VHF QSO Party, we will *not* be participating in that event, so if you were counting on the contest to find us for FN33 or Vt, look for us instead on the traditional second weekend in June.

Our Mt. Equinox station will be operated in conjunction with the annual vintage car race up the Mount Equinox auto road. We plan be on the air from 1100Z to 1800Z June 11 and 0500Z to 1200Z June 12. VHF/UHF operation will be SSB/CW on 50.160 144.210 432.110 and FM on 146.55 and 446.00. HF operation will be in the lower portions of the General phone and CW subbands on 80-12m and the Novice phone and CW subbands. QSL to the Wellesley ARS, 200H Linden St., Wellesley, MA 02181-7913.

We're hoping for some good VHF/UHF openings and good HF band conditions!

Well, its unfortunate, but long ago when 440mhz was an unknown place
and everyone wanted to be on 2 meters, people who wanted to set up
closed repeaters were told they had to go to 440mhz. So, they had to
spend alot more money to set up their systems, pioneering the way
for others to follow.

Now that equipment manufacturers have decided to drop prices and
make 440mhz equipment available at inexpensive costs you expect the
440mhz band to change? Sorry, I don't think so.

> There are also far too many "paper" repeaters.

Clearly, paper repeaters should not be coordinated. Around here, if
a frequency is "coordinated" but you listen to it for a month and hear
no activity, you have squatters rights to plant your butt on that
frequency, and if you document everything, the fact that a repeater was
"coordinated" on that frequency beforehand is immaterial. The 440mhz band
in NE is just about full, and we routinely have to worry about this
happening should one of our systems be taken down due to equipment failure,
etc.

MD

Maybe you ought to look at yourself as a reason why people want closed
repeaters in the first place.

> You can't put up another open 440
> repeater that the community demands because all the closed repeaters are
> "coordinated".

So? Move up to 1.2ghz.

> The greater community is being damaged by the closed repeater
> owners and by the coordinating bodies.

Opinion, not fact. Around here, closed repeaters contribute heavily to
the amateur radio community, offering sanctuaries away from the increasing
number of CB transplants that are destroying 2 meters.

> There is no doubt that as the
> ranks swell, more and more pressure will be put on the closed repeaters to
> open or make way for open machine. To speed the process up, class action

I highly encourage you to litigate. I can't wait to see the courts laugh in
your face.

> I like the "closed means no coordination" policy several people mentioned.
> We should all put pressure on the coordinating bodies to adopt this.

If I applied for and was denied coordination simply because my machine
was going to be "closed", you can bet the coordinating body would be
hearing from an attorney. Since the FCC recognizes that repeaters can
be closed, a coordinating body's denial of coordination on the basis of
"open" or "closed" status is illegal and discriminatory.

> Closed repeaters don't fit the spirit and intent of amateur radio.

That's your opinion. And, with people like you in the hobby, I'm surprised
that ALL the machines in SoCal aren't closed.

> What do we do when the bands shrink, the ranks grow, and the number of
> closed repeaters increases? Do we just give up on the hobby? Do we operate
> only on the 1 or 2 frequencies where we can afford the dues?

Ah yes, now we see all. Translated: "I don't want to have to pay to use someone else's equipment." Yup, the good old welfare-state mentality once again. "HEY! I'm BREATHING, aren't I?!? Its my RIGHT!"

Maybe you should move up to 1.2ghz or 2.4ghz. Lots of spectrum up there for open repeaters, and spectrum that we're in danger of loosing due to underutilization.

What? Oh, equipment for those bands is too expensive, or you can't buy an appliance radio for those bands at the local HRO? Well, gee, isn't that just too bad. Sounds like the same issue closed repeater owners faced years ago when they wanted to set up a closed repeater and were told they'd have to do it on 440mhz.

Yes, my sentiments exactly. What is the next thing they're not going to like
about your repeater? Oh, you don't have free autopatch access! Well, you
should be decoordinated for someone who is willing to give us free long-
distance autopatch privs!

Gimme, gimme, gimme. The welfare-state mentality permeates the hobby.
Sickening.

I am trying to get a community station off of the ground in rural Vermont, and finding the FCC regulations to be a serious stumbling block. Rather than pay several thousand for a new transmitter, or pay several thousand to get a homebrew transmimtter cleared by the FCC, I'd like to find someone (or some station) with an old low power (50 watts or so) transmitter that they would be willing to sell or give away (tax-deductible).

If you have such an item, or have any good ideas about where I could find such a thing, please send me mail at:

tah@uclink.berkeley.edu

Thanks,
Andy

Exactly! There's nothing wrong with a closed repeater. Lets face it, if people would grow up and learn some on-the-air manners (ie, not abusing autopatch, listening, etc.) then the need for closed repeaters would dwindle to nothing.

There are ways other than monetary to support a repeater but I think you've gotten it pretty much right.

Oh ooooo here he goes again.....

In the finest tradition of stirring things up, I would like to suggest the following. In areas where demand exceeds availible spectrum, frequency coordinations should be distributed on a lottery basis, and with limited terms. I would propose that terms be limited to ten years, long enough to obtain an adequate return on the equipment investment, and short enough to allow the changing demands of the hobby to be reflected in the band utilization.

I personally suspect that the private groups would do better than open ones in this matter, since the groups would probably be applying in mass for the coordination. It would, however, allow for some turnover in repeater usage.

Some rules for fairness in applications would need to be implemented.

: But what about the "closed" systems that have many users? They do exist. You
: can't simply say "throw out all closed systems". It just doesn't work. There
: may well be a need for reform in SoCal, but the band belongs to the owners of
: closed systems just as it belongs to those who want every system to be open.

Agreed, the closed repeater owners would have the same rights as the rest
of us. They simply wouldn't have rights over and above the rest of us,
namely, coordination for a repeater pair on a closed or private basis.

Once 440 reached the level of openess found on the model band, 2 meters,
perhaps this could be relaxed.

The current 440 coordination group has abused its authority recklessly.
This can be seen quite clearly by the disuse into which Southern Cal's
440 band has degenerated.

: As a frequency coordinator, you must look at both sides of the issue. Many of
: the closed systems have been operating for long periods of time without causing
: problems. A coordinator just can't say "Well, we've changed our policies, and
: you have to go". They'll get their butts sued off.

: The "paper" radios should be decoordinated. There's no coordinator worth his
: salt who will disagree with this, but you can't expect any coordinator to just
: see one side of the issue.

True, but the ones in Southern Cal are happy with the paper radios. If
not, then why are they coordinated?

The reason it's worked wonderfully on 2 was that the closed repeater groups
were told to move to 440. Many years ago. They've been there for a LONG time.
Now you want ot change the rules in midstream and destroy their investment in
their equipment and site, just so you can yak on another frequency.

Have you got pockets deep enough to defend coordination groups from the masses
of lawsuits they'd get by implementing the change you want? They're not going
to risk their livelihoods on doing that, and I don't think they should.

That's a moot point. 400 as a haven for closed systems was acceptable as late
as 1979 when I first ventured up there, but its not acceptable any more!
We have to adapt to the greater good.

If a majority of hams are no-codes and want open repeaters up there, they will
eventually get it! The times they are a changing...
We should replace it all with spread-spectrum stuff soon anyway :-)

I wouldn't call the 2 meter plan all that wholesome or well-wrought, it is just different and has existed for a longer period of time. Looking at what has happened to the 440 band and somewhat to the 220 band was that originally, there was a group of people who wanted to experiment with far reaching linked repeater systems. Unable to do so on 2 meters, because the band was already full, they move to another band where they developed their systems. At great expense to say the least because cheap HAM equipment was not available for these bands. Now, that 2 meters has become even more comgested, people are looking to more furtile landscape, only to find that it is already occupied. (sounds a bit like the settlers verses the indians.) They talk of outlawing the systems that are present. Restricting what they can do. (Move the closed systems off to the reservations.) Jeez, people never learn.

20 years ago, the JPL Amateur Radio Club wanted to put up a 2 meter repeater and a 220 repeater. We were told that there was no place for us to go on 2M, so the co-ordinating body gave us two 220 repeater pairs. One we made open, the other private. We were one of a few organizations supporting 220. Now that spectrum has become scarce, the whiners are saying, "How come JPL gets two 220 freqs when the band is crowded? Whaaa, Whaaa, Whaaa." Ah, so much for being a pioneer. (By the way, we have since adopted the policy of allowing non-club members to use the private repeater even though it will continue to listed as a private repeater.)

I've been following this thread with some interest from the point of view
of someone who will be a newcomer on the airwaves. (I'm taking the license
exams this weekend.) From what I understand, as far as the FCC is concerned,
a coordinated repeater has preference over an uncoordinated one should they
be interfering with each other, and that is all. My question is this: Who
are the coordinating bodies and how are they appointed. Is there any official
(FCC recognized) status of these bodies, or could anyone form a group and
claim to be a new repeater coordinating body? Also, what criteria are used by
coordinating bodies to resolve disputes, and are these criteria consistent
amoung different coordinating bodies? If someone gets a repeater to be
coordinated do they get to keep their frequencies indefinitely, or can the
coordinating body be persuaded to give it to someone else. (and again, what
criteria would they use to decide.)

Thanks,
-Brian

>as late as 1979 when I first ventured up there, but its not acceptable
>any more! We have to adapt to the greater good.

Wrong! This is about as dangerous an attitude as ANY I have heard on USENET. Let me explain with an analogy. "The US as a haven for private homes was acceptable as late as 1994 when I last visited the US. Its not acceptable any more due to the vast amount of homelessness in the world. We have to adapt to the greater good. Every homeowner shall be required to house as many homeless as possible."

Closed repeater systems are private property. It can not be confiscated "for the common good." TANSTAAFL. If you want an open system, put it up yourself. The problem, of course, is that there is only so much spectrum to spread around. A closed system uses up spectrum and deprives the vast majority of hams access to this spectrum. Since this spectrum is meant as a "public park," there is something amiss when most of a band is populated by closed repeaters that are rarely in use. By analogy, this is like taking Yellowstone and partitioning it out to individuals as private fiefdoms. Highly active closed repeaters are not the problem as this indicates that the spectrum is in use. Closed repeaters that are rarely in use waste spectrum. Why can't such repeaters be shunted to a single frequency pair with different PL offsets? Open repeaters are open to one and all so there should be plenty of users all the time. Closed repeaters could share frequency pairs. Thus, the interests of all can be well served.

But does the FCC say that closed repeaters must be given the same consideration
as open ones by the coordinating body, without regard to their open/closed status?

Just because something is discriminatory doesn't mean it's illegal, otherwise
an employer who hires only competent employees could be sued for discrimination
against the incompetent.

(I posted another followup to the "Ham Radio few problem" thread asking for
more info on coordinating bodies, their status, who appoints them, etc.)

The question that this brings up is this: Could a coordinating body give
preference to open repeaters over closed ones if they wanted to? over
existing closed ones? (The answer to the question "Do they actually do
this?" apparently seems to be "No".)

Not trying to fan the flames too much. Just looking for information.

(remainder of dribble removed)

Since when was Amateur Radio a Financial Investment? I think you
ought to re read Part 97 a few times..... There are many repeaters
whose owners will never recoup the costs of keeping the repeater going.
It isn't the goal to make money -- the goal is to have fun. The best
systems are the ones that have been around for a while, since they have
had time to get things working right. Yanking the coordination after 10
years is stupid -- nobody will want to make a long term investment of
time and effort and their own money. This is the same kind of short
term thinking that is getting the American economy's ass kicked around
the world. Great.

Perhaps a method of reviewing the repeater operation after 10 years may
be more appropriate. Perhaps a repeater owner wouldn't mind having
some new blood and offers of new/younger help. I'm a relatively young/new
ham in a congested area, and have toyed with the concept of putting
a repeater up. I certainly wouldn't want to kick off a perfectly good
repeater just because I won a lottery -- that would make me REAL popular
with the hams, wouldn't it?

I've been told to look at 1280, and when the time comes, that's where
I will look.

>Mixed and RTTY DXCC. If I work some other modes or some bands, I'll use
>N7RO cuz I don't want to spend the money on cards I not really chasing,
>but want cuz some day I may change my mind.

Sure, but if you are an ARRL member and you work HC8N you can
send me a card via the bureau and you'll get one back. If you
don't know who the manager is you can send it via N7RO, who will
then send it to me, I send it back to him and he sends it to you.
The main difference is that you paid him to find out who HC8N's
manager is. But, as I said, there are other reasons for using
someone like N7RO.

>It's not too bad for stateside mgrs, but for the DX mgrs, you're talking
>$1-2/card rather than about 20 cents.

Sure, no argument with that. I suppose N7RO sends to overseas
managers, I don't really know. Again, you could reach that same
manager yourself via the bureau. If the manager doesn't reply
to bureau cards, he's probably not going to reply to a stack of
100 cards that N7RO sends, either.

>Personally, I'm not thrilled with the response rate thru RO. I remember
>15-20 years ago when Jesse, W3KT did it, and seemed to have a much better
>response rate.

Much of the responsibility lies with the managers. I don't have
to reply to the cards N7RO sends me, he doesn't pay me a cent for
doing it, and it costs me the price of the cards. But responsible
managers reply to all cards.

I suppose it could be that N7RO doesn't keep up with the manager
lists as well as W3KT did, but I've no evidence that this is so.

Maybe it's just the times, when there are pigs/thieves
>like F6FNU and DJ6SI who want "tips" for their troubles...

DJ6SI is not a QSL manager, he goes on DXpeditions to places
that are semi-rare to rare. He then replies to QSL cards that
people send him. I don't know what the minimum is you can get

away with and get a card from him, you need to send $2 for the Germany --> USA mailing costs, and I have sent him $3 in the past and had cards back. The rarer the place he goes to, the more I contribute. He doesn't answer bureau cards, and he doesn't keep his logs open for more than a few months, but I can live with that.

F6FNU is only a manager, not a DXpeditioner, and I think he has reformed somewhat (at one time his cards were not counted for the French awards, not sure if that is true now). He replies promptly, and I believe he will send a card if you send him only $1. Again, if I want a card for a new country, I don't mind sending $2 a time. You can confirm a couple of hundred countries via the bureau, and spending a total of $250 confirming the other 120 or so is peanuts compared with the hours you put in working them, or the equipment you use to work them.

So I really wouldn't call said people pigs or thieves, especially when they go on DXpeditions to countries that we need. I have had essentially 100% returns for direct cards over the years, thanks to a lot of responsible DXers and managers. I've never used N7RO, but I wouldn't discourage anyone from using any method of getting QSL cards if that is their goal. Happy DXing!

Yeah...me too! Only Im not as picky...I'll take any old AM broadcast transmitter, even one of those crummy 500-1000 watt, all tube, plate-modulated jobbers! ;-)

>to posession of property. Think about it...

If a repeater retransmits signals it receives on a public frequency,
it's not the responsibility of those legally using that frequency to
keep the repeater from doing so. Instead it is the responsibility of
the control operator of the repeater to make sure it doesn't re-transmit
signals the control operator wishes not to be repeated.

It isn't trespass to drive down a public street and have a private
tow truck grab hold of your car and drag it onto private property.
In fact it's just the reverse of trespass, it's kidnaping.

Gary

3192. "World Broadcast News" (April '94)

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-01 18:50:28 UTC
From: eamonn@muppet.bt.co.uk
Message-ID: <2sil9k$kjg@nemesis.muppet.bt.co.uk>
Source record: 265872

I'm looking for the text of an article that appeared in the April edition of the magazine "World Broadcast News".

The article referred to a radio station which wished to broadcast in Austria.

Apparently the Austrian authorities had claimed that the station would need a licence to broadcast and they were not going to issue one.

The station then took their case to the European court and a ruling was made in their favour based on the finding that a licence was not required.

I realise that there may be some inaccuracies in the above synopsis (for example I didn't know that Austria was under the jurisdiction of the European courts yet) but if anyone knows of the article could they supply me with the text or let me know where I could get a copy of the April edition.

Thanks in advance,

Eamonn.

>do you protect =your= repeaters from the next batch of frequency grabbers?

Ah, a protector of vested interest. No one is after anyone's repeater equipment. What they are after is use of *public* spectrum being denied them by current squatters under the guise of closed coordinations. Of course people can control use of their privately owned equipment, but they can't do that by claiming exclusive use of a public resource. That would be like someone driving their car on the Interstate and claiming no one else can use that lane for 200 miles because they decided to drive there. They can control who gets in their car and drives it, by appropriate use of locks, but they can't claim ownership of the roadway. As traffic demand increases on the roadway, they may have to give way to high occupancy lanes (open repeaters) where more of the owners of the roadway resource can be accomodated.

nuts.

Southern California isn't the whole US. Most of the US doesn't have the packing density that's present out there - even in the other big metro areas.

We've got something like 11 440 MHz systems in the area that are reachable with modest equipment. and i can scan 'em all day and see only light use (fewer "kerchunks" because the PL stops noise from doing that...)

and 2m isn't CB here either. we've got a few drunks that are being worked on but we're smart enough to work the issue w/o having to spend big bucks on suits...(all are pre-2/14 tech or higher (several extras..)) although it appears on the surface there's a lot of posturing going on to get the "legal" solution applied in one of the radio clubs - i think all that will do is clean out the club treasury even if they "win"). heck the "closed" VHF repeater can have days when it's busy all day long and the "open" repeaters are devoid of contacts.

saying that "2m is CB today" is repeated assertion (big lie technique). just like the guys that like to repeat that "you just can't build anything anymore" or that "10m is dead until the next sunspot peak, don't even listen to the band or call CQ because you won't hear anything". It can be a self-fulfilling prophecy if the folks expecting lid operation on 2m also act like lids when they are on 2 - thereby reinforcing a bad example.

Bly & Co. are going about it the wrong way - but then he's a Wanna-Be-Establishment-Pretend-Radical-I-Have-No-Life sort of guy. He should be bright enough to know the only way you can get this stuff to change w/o just lining the participants up against the wall is to infiltrate, take control and then show your true colors. He should have figured this out by himself but he likes to grandstand and you can't monkey in the works when you call attention to yourself like that. Grandstanding tends to cause "immune" reactions when you really want to get inside and control the "organism" like a good little virus.

Of course, it's too late for roger to take this approach - sounds like he's well known to the power structure and they've id'ed him as a problem to be watched. he can only cause trouble and inconvience with minimal impact on the power structure.

Jose
Hello from ROSE-HULMAN Institute of Technology, Terre Haute Indiana.
Our Club station is W9NAA. Its been around awhile
We operate all lo bands + 2m + 70cm + 440 +++. AM, do any
wet nosed xCBrs know what that is? FM, SSB, FSK, RTTY, SLOW/fast SCAN,
packet.
We are an engineering college, so not much ham activity during
the summer. Contact us anytime though to set up schedules. The gang
would love th have sat schedules this fall.

Email David.Gahimer@Rose_Hulman.edu

3197. CORRECTION - Mt. Equinox special event station

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-01 20:30:17 UTC
From: sas@opus.xyplex.com
Message-ID: <2sir4p$f59@xap.xyplex.com>
Source record: 265904

Here is a correction to my previous posting. (I had the times wrong.)

The Wellesley (MA) ARS will operate W1TKZ on HF/VHF/UHF from Mt. Equinox in southern Vermont in the weekend of June 11/12. This is a great chance to add Vermont to your WAS list, or add FN33 to your VUCC grid totals. Because of the date change for this year's ARRL June VHF QSO Party, we will *not* be participating in that event, so if you were counting on the contest to find us for FN33 or Vt, look for us instead on the traditional second weekend in June.

Our Mt. Equinox station will be operated in conjunction with the annual vintage car race up the Mount Equinox auto road. We plan be on the air from 1900Z to 0200Z June 11/12 and 1300Z to 2000Z June 12. VHF/UHF operation will be SSB/CW on 50.160 144.210 432.110 and FM on 146.55 and 446.00. HF operation will be in the lower portions of the General phone and CW subbands on 80-12m and the Novice phone and CW subbands. QSL to the Wellesley ARS, 200H Linden St., Wellesley, MA 02181-7913.

We're hoping for some good VHF/UHF openings and good HF band conditions!

73,
Scott WO1G, Vice President, Wellesley Amateur Radio Society

I agree with you. I don't think we are communicating. I think part
of the problem is that the situation in So. Cal is so different than
most places in the country. The issue is not property rights
to the radios, but "ownership" of the frequency pair.
The prevailing attitude is that if you talk on the output of a
seldom-used closed repeater or co-channel with an open system, you are
jamming and being antisocial. So in effect, an environment exists where
seldom-used closed repeaters "own" a freq pair and coordinating groups
here support this.

AGAIN: the property right issue is a red herring! It's the attempt
at "frequency ownership" that is the big problem in So. Cal.

>The problem, of course, is that there is
>only so much spectrum to spread around. A closed system uses up
>spectrum and deprives the vast majority of hams access to this

>pair with different PL offsets? Open repeaters are open to one and
>all so there should be plenty of users all the time. Closed repeaters
>could share frequency pairs. Thus, the interests of all can be well
>served.

Yes, yes, yes... exactly; now you've got it! I have long been preaching that the ham and citizens bands should be a radio parkland of what ever spectrum is left over after a fair and prudent allocation to government and commercial users. There is a vast amount of spectrum that will be auctioned this summer to PCS. I would like to see a large chunk of that returned to the citizens as a new citizens band for low-cost, licenseless, appliance-radio operation.

This issue of "wanting something for free" is also a red herring. There has never been a shortage of people willing to put open repeaters in So Cal. I have supported several open repeaters and put one on the air. A couple people e-mailed me to say they tried to join "closed" 440 repeater groups and were told "no no-codes allowed", etc. That's just sad!!! If those closed cliques don't want us to share their machine, that's fine, but they have to be willing to share the frequency pair. We all suffer as chunks of our parkland are roped off by these guys.

Speaking of dribbling... I proposed 10 years as long enough, obviously you think longer is needed. You want to tie up the frequency for 50 years or something? I say that is too long to allow for changing public resource needs. Incidently, I didn't say your investment would be confiscated, just the coordination would be yanked. I find it funny you would chastise me about the investment, then say exactly the same thing. Go buy a clue or something.

Oh well, I sat on the sidelines long enough on this one, so here's my .02 worth:

First of all, there are several open 440 systems in So. Cal. Of course, if you only consider LA and Orange counties, there are fewer, but they are there. Lot's more in San Diego and Imperial counties.

Some of the closed 440 repeaters I am familiar with in the LA/OC area are special use systems, i.e.: earthquake nets/telemetry, RACES, . . . Yes, most are closed, and seem rather quiet. Several repeater trustees I have talked to are more than willing to admit new members to their clubs for repeater access, and naturally they want the user to pay dues. The dues pay the phone bill, maintenance, and upgrades. Most are also tolerant of an occasional user who is not a repeater club member. I have had one trustee specifically invite me to participate in QSO's now and then even if I don't join. Some systems don't want money, they want participation, i.e.: RACES/ARES. One way or another, someone needs to pay the bills.

On the other hand, as one who travels a bit, I am happy to find so many open machines across the country. When I go into an area, I usually look up a repeater, preferably with open 911 access, and plug the frequency into my HT. I can find someone to talk to, I've participated in some interesting nets, and been able to help in some bad situations. I had a shredded motorcyclist last week who needed help, an open machine and someone with access codes got the help there. I am grateful to all who maintain an open machine and graciously allow me the use of there systems, but I have no right to demand it of them. I do have a right to use the frequency, but if the system owner chooses to use an unpublished pl or other method to restrict access to the machine, I need to respect that. It is called courtesy.

All areas seem to have their good and their bad operators, and I have seen no correlation between class of license and good/bad operation. People new to amateur radio, or new to a particular region with "local customs" make more mistakes than the old timers. That is cured with time and tolerance. Mistakes by themselves don't make an operator a lid, bad manners do.

(I deliver quite a lot for .02, don't I?) :-)

Shel-

Is it possible to save your spreadsheet in "comma separated", or some other ASCII format? If it wasn't too large, you could paste it into a message here, and we could all give it a try! Several different spreadsheets have the ability to import data from others. It would only be necessary to use a text editor, to clean it up first.

Dave-

There may be differences in plate dissipation and inter-electrode
capicitances, between the members of the 6146 family.

In repeater use, one of the members was reported to have higher noise, but
I can't recall which.

The most significant difference from my point of view, is that the 6146B
(and possibly 6146W?) has a welded plate cap. The older versions had a
soldered plate cap. Due to high peak plate currents in a Class C amplifier
used for FM, the solder will eventually crystalize, and the plate cap will
come loose. This doesn't happen with a welded plate cap.

The loose plate cap was the most frequent failure mode I experienced, using
a pair of 6146's in a GE Prog Line repeater. On rare occasion, the heat
generated in the loose connection can crack the tube. Re-soldering with
ordinary solder, is a short-term solution, since it quickly oxidizes again.
Use of a higher-temperature solder might help, but just for a little
longer!

Considering availability of tubes, you may be eventually forced take what
you can get!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 1/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 1 JUNE AND FORECAST UP TO 4 JUNE

IPS Warning 15 was issued on 26 May and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 068/002

1B. SOLAR FORECAST
02 June 03 June 04 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 070/005

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active, apart from minor
storm levels 09-12UT.

Estimated Indices : A K Observed A Index 31 May
Learmonth 23 4345 3343
Fredericksburg 27 28
Planetary 25 32

Observed Kp for 31 May: 4655 3343

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Jun 30 Unsettled to active, with brief minor storm periods.
03 Jun 30 Unsettled to active, with brief minor storm periods.
04 Jun 30 Unsettled to active, with brief minor storm periods.

2C. MAGNETIC COMMENT
Recurrent coronal hole activity remains in progress.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
01 Jun normal fair poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Jun normal fair poor-fair
03 Jun normal fair poor-fair
04 Jun normal fair poor-fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 01 June: 23

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
02 Jun 20 Near predicted monthly values.
03 Jun 20 Near predicted monthly values.
04 Jun 20 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Local propagation conditions may have been degraded due to night-time
Spread F and occasional Sporadic E layer. Similar conditions are
expected for the next three days.

In article F40@news.Hawaii.Edu, jherman@uhunix.uhcc.Hawaii.Edu (Jeffrey Herman) writes:

[Text edited out, including a note from Roger Bly claiming to jam closed repeaters]

>Who is it that keeps claiming that VHF/UHF is healthy in So. Cal?

Me, Jeff. Me. If it makes you sleep better at night to think that VHF/UHF is all rife with jamming and poor operating in Southern California, then go ahead and keep ignoring reality. My experience is, most repeaters in Southern California are *not* constantly jammed, most operators on VHF/UHF in Southern California *are* good operators, but we do have a few well known examples of "trouble". Nonetheless, in a private conversation with one of the FCC PRB staffers, it was expressed to me that every major population center in the USA has at least one "trouble spot", but that somehow Southern California has gained the most attention.

Heck, in 1978 when I got on 2m, the WR6ABM repeater (later WB6AAE, I recall) was constantly jammed. This machine was in the Oakland hills, far away from Southern Calfornia and long before the dropping of the code requirement from the Technician license. Guess what? This machine was just like the MWRA 147.435 machine is today! Guess what? This didn't mean that VHF was unhealthy in Northern California 16 years ago.

>Sure glad we don't regularly have these problems down on HF CW.

Well, if it makes one feel better to think that HF CW is free of jamming and poor operating, then please continue to ignore reality. I regularly use HF CW (on 20m, 17m, 15m, 12m and 10m), and I've heard incidents of jamming and poor operating. The DX pile-ups are good examples of ill-mannered HF CW operating. I've also heard people intentionally jamming, in CW, DX pileups and SSB nets. Does this mean HF CW is all bad? Not any more than VHF/UHF is all bad.

It is common human nature for insecure, unhappy people to deride others. Too bad some have to cope with their frailties by condemning others, no?

Fine -- I am guilty of bad word choice. But your original message construes
that the repeater owner is trying to recoup his/her initial (monetary --
equipment costs money) investment. ("long enough to obtain an adequate
return on the equipment investment") Return of what? 10 years to get
back what? My original point stands... I hope you aren't implying that people
go into repeater ownership to make money -- plunk down some change, put
up a repeater and in 10 years the dues pay it off plus a tidy little
profit and get out. Not only would it be illegal, but it would be
totally against the spirit of amateur radio. Anyhow, on to more
general items -- I was just a bit taken aback at your original suggestion
(which may have been misinterpreted)....

I don't think you would be terribly happy if you had a repeater, well
run and popular, and had the coordination yanked as 10 years came up
and were bumped by someone who really didn't care too much about how
his/her machine performed -- just that he/she was next in line.
Suppose this replacement machine is run closed -- tight as a drum....
I happen to like the machines I use, and would be very unhappy to

see their coordination yanked (therefore forced off the air) just
because 10 years came up.

Like I said earlier, I wouldn't mind a method where after 10 years, a
case could be made that the repeater wasn't being maintained to
current standards, that a notice to show cause be issued by the
coordinating body. However, a blanket 10 year term gets the good
with the bad. Some machines should be booted off the next minute,
for some, 50 years may be appropriate. It all has to do with
individual situation. I support the following as grounds for
decoordination: abandonment, modification of repeater to
change the coverage area such that interference occurs, violation
of part 97 including wanton negligence that allows violation of part 97
to occur, not keeping the machine in compliance with contemporary
technical standards (i.e. if the machine drifts across three channels
in the course of the evening). Transfer of trustee is a trickier
issue. I have to think about that, but if it is a good machine, why not?

While I don't live in SoCal, I have visited, and worked "closed" machines
as guests. You just have to ASK. I assume that many will ask that you
contribute to the costs of maintaining the machine if you are a regular
user -- that is fair. In fact, in about 2 weeks, I will be in LA again,
and will once again test my theory to see if being nice will get me
kicked off or not...

If I were the trustee of a machine, I would run it as a closed machine.
Why? To keep some semblance of contact between myself and the users.
Would I chase away visitors? No. All I would ask for is a howdy,
my name is ..... If you are a lid, then I would ask you to go
away. Part 97 can be twisted to read that a repeater owner is
REQUIRED to know and grant express permission to use that repeater.
The new FCC 610, which we all will be required to sign in the next
10 years specifically states that as a licensed operator, "the station
to be licensed will be inaccessible to unauthorized persons." This
implies all repeaters must be closed (which is the FCC's current
pseudo-opinion). (i.e. the trustee must make sure that all
people on the machine are legally licensed with tech or higher
privs -- lest he/she face a NAL from the FCC -- hope it doesn't
go this far, but it could). Besides, what makes it so clear that
if you kick someone off, and you replace the machine, you will get
someone who is more "benevolent" than the current owner?

There are repeater owners that only require courtesy, a bit of common
sense and participation as the entry to "membership" -- some will even
refuse to take financial contributions.

I also doubt that the so called "no-codes go away" clubs will let no-codes
in, if asked nicely. I think most repeater owners know that
courtesy and good operating practices don't correlate well with license
class...

There is bound to be a slow, but sure turnover in the machines anywhere, SoCal included. People die, lost interest, tire, run out of $$, you name it. People's attitudes change...

I see you totally ignored my comment about 1280. There is an added subtle, albeit twisted, advantage to 440 remaining closed -- it forces new machines up at 1280 and beyond. Face it, we're gonna lose part of 2400 soon, and 3 GHz is next. There is going to be a great re-alignment in the microwave bands caused in party by PCS and also in part by the mandate to sell off spectrum. If we don't populate up there, it'll be gone faster than you can kerchunk a machine.

I can understand why you forward your idea -- its like term limits. Very appealing now, since you are frustrated. But I cannot condone a system whereby you automatically kick people off after 10 years. Not without some review mechanism.

Finally, a question that donned on me. Why haven't more people gone to GMRS? There are repeaters, and I'm sure the licenses are on terms, subject to public review... For those who get into ham radio to be appliance operators (nothing wrong with them) and chit chat on the radio, it seems like a good alternative to me. You even get full privs without code :-)o

3210. Antennas on Taurus Wagon

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-02 01:31:42 UTC
From: nc1n@jjmhome.jjm.com
Message-ID: <2sjcpu$7ba@jjmhome.jjm.com>
Source record: 265935

I will soon be getting a Ford Taurus wagon. I'll be installing a 2M rig and an HF rig. I'm trying to decide where to install the antennas.

For 2M, I'm leaning towards a permanent, roof-top installation. For HF, I'll be using a Hustler mast, and I have no great ideas on how to mount it. On my current car, I mounted the HF mast via a heavy aluminum plate bolted to the underside of the steel bumper. However, the bumpers on the Taurus appear to be much flimsier and I'm concerned that the flexing caused by the mast would be too much stress. Of course, there's always the option of having it mounted though the sheet metal on the side... unlike the 2M installation, however, it can't be later passed off as a cell phone mount.

If anyone has any experiences mounting antennas on Taurus wagons, I'd love to hear about them. I can be reached at nc1n@jjmhome.jjm.com or chr1@hp1.ndhm.gtegsc.com.

Certainly is a day I look forward to all year (the no sleep hang over is tough, though!).

I also use marine deep cycle batts that I bought at Sears. On sale, the smaller one was < $50 and is about 70 Ah. Here's the fun part...I bought a 1' x 1' solar panel, put in a diode and charge the battery with it. Then I can get the bonus points for natural power! You must discharge the battery (a card came with the battery showing when it is discharge which doesn't equal totally flat) then charge it with some natural means. I usually start 6-8 weeks before field day to make sure I have a full charge. I get about 200-300ma from the panel in sunlight.

Have fun on FD, I hope to work you!

Yes, they are light bulbs, and I bought mine direct from Yaesu parts in
Los Angeles, CA, U.S.A. They weren't too expensive and came very fast.
The back of the control head comes off easy enough, but you need to get
to the fron, which requires the removal of a little nut, if I recall
correctly. It was under some green locktite, so I didn't see it right away.
I think you also need to take off the nuts around the mike connector jack.

Good Luck!

Message-ID: <9406020154.AA09966@dumpty.aerospace-lab.go.jp>
Source record: 265753

One comment on N7RO qsl service.

I've been the QSL manager over 20years. Most of the operations were
made by myself. They were C21/JE1CKA, S21CW, 8Q6AH, DX1TDX, VR1AK,
VR4CW(H44CW), YJ8CW, VR8D in '70s and KH0AM in '90s.

I often received the cards from N7RO for above operations with
a Self Addressed Label and one/two green stamps for the postage.
I replied to all the requests and sent out via seamail. I believe
N7RO *did* the appropriate job. Not too good but not too bad.
You should trust him. All the qsls must be sent out to the manager
with the cover postage. If you did not get the cards through N7RO,
it must not be his responsibility but the managers must be blamed.

Tack JE1CKA/KH0AM(aka JA0CUV) <je1cka@asuka.aerospace-lab.go.jp>

Derek - I think you are missing my point (sort of). The two I mentioned
are profiteers. DJ6SI (and some others) are professional DXpeditioners.
They make a nice living by going to places (yes, some rare) and raking in
the bucks for QSLs. It's one thing to contribute voluntarily for an
expedition (which I frequently do). It's another to "extort" money by
REQUIRING a donation for a QSL. This practice should be banned on

ehtical grounds by ARRL. Let see how fasr these guys change their
practices if their expeditions don't count for DXCC.

From: wy1z@bach.coe.neu.edu
Message-ID: <WY1Z.94Jun1223529@bach.coe.neu.edu>
Source record: 265934

I recently purchased a new Icom IC-3SAT 220Mhz HT, and was wondering if there were any mods for it.

As the maintainer of the Boston ARC FTP archives, I did check there before posting this. If I do find any mods which work, I will include them in the archives.

Thanks much for any help you can offer.

73,
Scott

Let me begin by making a retraction of something I didn't say. I do not propose evicting any existing, live-and-well, private/closed repeater from 440 (as if it were possible). However, the following proposal is actually worthy of spending a few neurons to study...

Conway Yee (yee@mipg.upenn.edu) wrote:
> A closed system uses up
> spectrum and deprives the vast majority of hams access to this
> spectrum. Since this spectrum is meant as a "public park," there is
> something amiss when most of a band is populated by closed repeaters

> served.

This reminds me of the Motorola/GE trunked system sales pitches about effective use. Given the state of OUR art, I think this is as close as we can hope to get. Hmmmmmm <fading off deep into thought>

It sounds like Mike is referring to a recent conversation between Tony
and myself.

For the record, the amateur we caught, which did involve a NASA
radio tech, was "tried" by the local amateur club. He was "sentenced"
to a 1 month "suspension" of his transmitting privileges. The amateur
was a 12 year old boy. He asked the club to try him rather than report
him to the FCC, which we were quite ready to do, with considerable
evidence. The FCC was never involved. The boys parents later
prohibited him from using his radio after another questionable event,
and we haven't heard from him since.

Yes, the FCC is often slow in responding to interference complaints. The
.435 repeater is rife with examples of spotty or non-extant enforcement.
At the same time, some people *are* being busted, and Richard Burton did
go back to jail for amateur radio jamming.

However, Roger is quite correct in pointing out the value of well-placed
peer pressure.

One evening, an unlicensed individual was operating on the air with a bogus
callsign. It was not immediately clear that he was not licensed. He
bragged about his place of employment having ham radios (Radio Shack) and
offered me a deep discount. His poor practice led me to check his callsign;
I was not surprised to find it invalid. When I spoke with him, he was quite
recalcitrant, and the unlicensed operation ceased. I guess he bragged to
too many hams, since someone contacted the manager of his store and he

was later fired.

One morning, a station was on the local repeater, obviously a young man, signing with a WB6xxx call. His obvious youth and naive operating manner suggested he was not legit; a check of his call sign indicated it invalid. I spoke with him on the air, mentioned his call did not appear to be current, and he apologized and went away. We haven't heard from him since.

>Perhaps your glasses are a little too rose colored, Roger?

Well, Roger *does* live in Southern California, and you *do* live in Rhode Island, a little out of VHF/UHF range. Roger's story sounds reasonable to me. Maybe your glasses are a little too mud colored, Michael :-) ?

3219. 18 June, Durham, NC: Commercial Radio Op Exams

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-02 03:57:29 UTC
From: samodena@csemail.cropsci.ncsu.edu
Message-ID: <2sjlb9$j4o@taco.cc.ncsu.edu>
Source record: 265942

Commercial Radio Operator License Examinations

Durham, NC -- 18 June 94 -- 9:30 am

SW Branch -- Durham Public Library: 3605 Shannon Road

Licenses attainable:

Marine Radio Operator Permit -- Element 1

General Radiotelephone Operator -- Elements 1 & 3

GMDSS Radio Maintainer -- Elements 1, 3 & 9

(probably**) GMDSS Radio Operator -- Elements 1 & 7

**we believe that element 7 will be available for testing

For more info or to reserve an exam seat, contact:

Steve Modena (919)787-7618 or Terry Murphy (919)471-4018

~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~

Commercial Radio Operator License Examinations:

Durham , NC -- 18 June 94 -- 9:30 am

Who is offering it: W5YI-affiliated National Radio Examiners

Though walk-ins will be allowed, seating is limited.
To be assured a seat, contact:

Steve Modena (919)787-7618 or Terry Murphy (919)471-4018

What will be offered:
Examinations on elements 1, 3, 9, and probably 7

Time: 09:30 AM
Location: SW Branch of the Durham Public Library (next page)
What to bring: Cash for the fees, id, non-programable hand
calculators and good preparation

* * *Personal identification: Bring at least TWO forms of
positive identification * * *

WARNING: Anything that even resembles cheating or an attempt to
cheat will be reported *directly* to the FCC, as per regulations

How does it work: very similar to the Amateur Exams,
but with certain exceptions

1. Any or all of the currently offered elements available may be taken
2. Elements may be taken in any order
3. Each element passed sucessfully will be recorded on a Proof-of-ing certificate
4. If you qualify for a license, you may prepare an FCC Form 756, or defer.
5. If you fail an element, there will no opportunity to retry during the same session.
6. The amount of time allowed for the exams will be reasonable, but not unlimited
7. We reserve the unequivocal right to limit seating: first come, first served!
8. Fees charged follow this NRE rule:

"At this time, NRE requires a fixed $35 fee from each candidate for the administration of any and all examination elements required for each commercial license per sitting. If any elements are failed, no license which required the failed element would be issued and the applicant would have to schedule another exam session and pay another fee to obtain the desired license."

FEES MUST BE PAID IN CASH ONLY -- no checks, no exceptions.

We are absolutely obligated to be certain that you are who you say you are: make sure that the identification that you present will pass muster--otherwise you will not be allowed to take an exam.

~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~

Commercial Radio Operator License Examinations:
SW Branch Durham Public Library: 3605 Shannon Rd.
Durham , NC -- 28 May 94

Steve Modena AB4EL (919) 787-7618 or
Terry Murphy AB4VJ (919) 471-4018

How To Get There:

Talk-in: we will listen for this Durham repeater: 144.85/145.45

These instructions work if you approach South Square Mall via 15-501 BYPASS.

You are in the vicinity of South Square when you can see the lone skyscraper with the "needle" tower.

Whether you are coming from I-40, headed north on 15-501 BYPASS... or coming from I-85, headed south on 15-501 BYPASS, there will be a sign indicating "Keep Left for 15-501 BUSINESS -- South Square."

Exiting from either direction of 15-501 BYPASS leads to the same spot.

Passing under an overpass, there is a traffic light at a cross road named "Westgate"... and the Lone Star restaurant is ahead at 2 o'clock.

Go straight ahead.

Midway to the next traffic light, there is a sign: "Next right to Auto Drive."

At the light, there is a big Circuit City store is on the left... and the only turn possible is to the right, onto Shannon Road.

Turn right at this light.

The first traffic light on Shannon Rd. is at Auto Drive and you are in the midst of South Square mall: continue straight ahead.

The next traffic light on Shannon Rd. is the 3900 block of University Drive: go straight ahead.

After passing the Shannon Manor apartment complex, the next intersection has a stop sign and is called "MLK Jr.": go straight ahead.

Heading up a small hill and reaching the crest just before the curve, you are looking straight at the Durham Library--Southwest Branch... a brick building set on the left side of and below the level of the road.

The exam site address is 3605 Shannon Road.

The exam room is visible through a very large window to the right of the building entrance.

Well, it certainly doesn't seem too coordinated when you have to
fight to get a word in on the 2M band in Southern Cal. Opening
440 would spread operators out more and give everybody a chance.

Shel-

Is it possible to save your spreadsheet in "comma separated", or some other ASCII format? If it wasn't too large, you could paste it into a message here, and we could all give it a try! Several different spreadsheets have the ability to import data from others. It would only be necessary to use a text editor, to clean it up first.

73, Fred, K4DII

Just for the record:

"comma separated" is called delimited. If the file had equal spacing between entries, then it would be fixed-length.

See if save-as has the option of a delimited or ASCII (text) delimited file format.

For 14.000-14.350 MHZ in you get 50.000-50.350 out which would limit it for most transceivers to SSB & CW operation. Ten Tec used this IF so it could be driven by those low cost 20 meter QRP rigs. The transverter itself can transmit from 50-52 & receive from 50-54 on all modes.

The way to approach this is from the financial point of view.
One is not supposed to make money from use of the ham frequencies.
An examination of the financial records of the owners of the closed
repeaters may show why they are so reluctant to open the repeaters and
maybe lose there nest egg. I know they will argue they are saving
for a breakdown or the day they need to replace the repeater. Just a
thought.

Huh? Who is making money? Do you have any idea how much it costs to run
a repeater? Equipment costs are just the beginning. You have to figure in
electricity, phone, and site rental, unless you happen to get all of those
free - and, I doubt it, as a good coverage repeater is not usually going to
be at someone's house - if it is, the coverage will stink, nobody will
pay dues to be a member, and the trustee isn't going to make any money
ANYWAY.

In the past two years that I've been a repeater trustee, my machine has
cost me in excess of $6,000; that doesn't include all the sweat equity
I've put into it where I've not put in some OT at work or turned down
a consulting job because I had to work on the repeater for some reason.

I don't mind spending the money. In fact, I don't accept dues from anyone.
Why? Because I don't have to put up with their bullshit that way. Once I
start accepting money from people, I can't really tell them to take a hike.
By not accepting money, and allowing people to operate on my machine through
my generousity and goodwill, I can turn around and tell them to get lost
if I want to (and I've only done that to a user once in two years.)

Naturally, not everyone is in the financial position to do this. Monthly
expenses for some repeaters can be hundreds of dollars. Luckily, with a
site up here at the University, I don't have that problem. But, when
you start adding in repair and all the other monthly expenses, why
shouldn't you have to pay dues? TANSTAAFL.

> namely, coordination for a repeater pair on a closed or private basis.

Refusing a repeater coordination on the basis of its "open" or "closed"
status could be considered illegal, as the FCC recognizes "closed" repeaters
as being completely valid. By saying that a "closed" repeater will not be
granted coordination you are not giving all repeater owners the same
rights, you are discriminating against closed repeater owners.

> Once 440 reached the level of openess found on the model band, 2 meters,
> perhaps this could be relaxed.

Why should this be a goal to achieve? Simply because 144/440mhz radios
are inexpensive today? If 440mhz doesn't present the level of "openness"
you like, then why not move up to 1.2ghz?

> The current 440 coordination group has abused its authority recklessly.
> This can be seen quite clearly by the disuse into which Southern Cal's
> 440 band has degenerated.

The only evidence I have seen related to band mismanagement posted here
by those who seek to eliminate closed repeaters from 440mhz are "paper"
repeaters being maintained by the coordinating body. And, while I agree
that this is improper, there are ways to deal with it above and beyond
eliminating closed systems on 440mhz.

> True, but the ones in Southern Cal are happy with the paper radios. If
> not, then why are they coordinated?

The easiest way to deal with paper coordinations is to document no activity
on a particular frequency for a month, and when you hear nothing, quietly
place an open system on that frequency.

When the coordinating body complains of "interference", you have sufficient
documentation to say "what system?" and keep on operating as you normally
do. At that point, the coordinating body can attempt to move things up the
chain to get your system taken off the air, however, if you've documented
everything sufficiently, you will be able to show that there was in fact
no machine on that frequency that was coordinated.

At the same time you put your machine on the air, you may want to take
all of your records of inactivity on that frequency and mail a letter to
the FCC indicating that you're setting up a machine on that frequency in
lieu of there being no active repeater there currently. This way, the FCC

has notice, and any complaints from the coordinating body can be easily dismissed.

After your machine is on the air, inform the coordinating body that you have set up a machine on the frequency in lieu of there not being a machine in operation on that frequency in # days.

Several people in the NE area have used this technique successfully to gain coordination in bands with "no" pairs left.

This is a common problem with newer cars and their flimsy, or plastic,
bumpers. One good solution is to order the car with the trailer towing
package. There are mounts available that slip into the hitch in place
of the regular tow bar with ball, or you can simply replace the ball
with a ball and spring antenna mount.

I just bought my copy of the Internationa callsign directory and
figured that it plus the buffalo callsign server would give me all the
addresses I would need. Wrong!!!!!! I see I now must buy the hard copy
of the North American callsign directory.
Until I do so, would someone be kind enough to send me the address
for CM6RJ in Cuba?
Thanks again,
Ron Thomas

Again, your bias shows. If your statement had been:

What is objectionable is that the coordinating body reserves the repeater pairs for a small group, thereby discouraging other potential repeater trustees from establishing repeaters on 440.

Then I would agree completely with you. Anyone who wants to set up a repeater, regardless of its status, should not be denied such because the coordinating body is reserving frequency pairs for their friends.

> To validate my point, all one needs to do is contrast 2 meters to 440 in

> open repeaters with good operating procedures and courtesy, AND LOTS OF
> FRIENDLY QSOS as the order of the day. 440? Mostly dead silence. The
> few open repeaters are very active; so much in fact that it difficult to
> get time on them.

The same is true of this area. But, of the 3000+ hams in RI, what percentage do you think have dual-band radios? Most new hams purchase a 2 meter radio by default, and don't even get on 440mhz until they have "discovered" the band, usually through the help of a friend who has a dual-band radio.

> 440 in Southern California needs a new coordinating body and a new
> coordinating philosophy, it's as simple as that. I propose the following

There is no requirement that membership charges need to be assessed
only for "expanded" uses.

> The
> problem that I have is with co-ordinated pairs being used by a small
> group (5 or 6 people) to the exclusion of all others.

The FCC has affirmed that all repeaters are in fact "closed" systems,
and the trustee can determine who can and cannot access them.

> There are also a
> large number of paper pairs here in So. Cal. where I have never heard any
> activity whatsoever. Unfortunately, since these pairs are "coordinated"
> they are not available to someone who may want to put up an open system.

This is poor policy, and what I would suggest people work to change.
However, if in the process you threaten other, completely valid and
operating, closed repeater systems, do not expect to make many friends.

> users.

Oh sure, someone can operate on the simplex input or output frequency,
but if they take steps to key the repeater knowingly (i.e. use the
repeater's PL even though they are operating simplex), then that can
and has been construed as interference.

Its a question of intent, and the admitted intent of Roger Bly is not to
operate simplex, but to disrupt the operation of closed repeaters because
he doesn't LIKE them.

"current squatters under the guise of closed coordinations"?

Gary, are you arguing that the long-standing coordinations of closed systems are somehow invalid or at least less valid than those of open systems?

The FCC has stated that repeater owners have always had the authority to deny
individuals access to their repeater.

> My recollection is that it simply allows the repeater owner to
> disallow the use of his/her equipment, i.e. the repeater owner may turn
> off the repeater if they choose not to allow outsiders to use the equipment.

If someone knowingly takes steps to key a repeater, even though
they have been told not to, then that is intentional interference.
You are correct in stating that nobody owns the frequency, and the
person is completely justified in operating simplex on the input or
output at any time.

However, we're not speaking simply of actions, we're also speaking of
intent. Someone may choose to operate simplex on my repeater input,
and use the same PL as I have on my machine because it happens to be
the same as one they use elsewhere. Does this become intentional
interference? Of course not, the person isn't intending to interfere.

That is not what Roger Bly indicated, however. He specifically stated
that he and a group of people go on closed repeaters and tie it up
with rapid-fire conversation, effectively forcing the trustee to shut
the machine down. Since this specifically requires an coordinated effort
on their part to disrupt the operations of a machine, I don't know how you
can NOT call it intentional interference.

3243. Re: Yaesu FT-530 Microphone Prob

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-02 14:22:07 UTC
From: jwdxt@csn.org
Message-ID: <Cqrx8w.EvJ@csn.org>
Source record: 265975

My thanks to all of you who responded, both here and via mail. I am posting this followup in case this information is useful to anyone else.

I received several replies stating that the mike element did not have an adequate path to the outside of the mike case, and the recommended mod was to drill a 1/16 inch hole in the appropriate place. I tried this, and there was no apparent improvement.

I received three replies stating that some mikes were shipped with bad mike elements or other parts, and that a call to Yaesu would get me what I need to fix it.

Before calling Yaesu, I called Ham Radio Outlet where I bought the mike. They said they were unaware of any problems, which is amazing considering the number of responses I have received here and on Compuserve acknowleging this phenomenon. However, the HRO fellow did say that the MH-29 is designed to filter out background noise, and that requires holding the mike close - VERY close - when transmitting. He said holding the mike 6 inches away would not cut it, and xmit volume would be lost. He also recommended talking right at the lower right hand area of the mike where the element is.

My preliminary testing of this idea seems to indicate HRO was correct. I will probably call Yaesu anyway, just to see what they say, but there seems to be a solution for now.

Thanks again for all the suggestions.

I am guilty of a poor choice of words. I do have an "FCC-recognized
closed repeater" and I do have "coordination". I was not attempting to
imply that the FCC recognizes coordination.

On Saturday June 4'th we will take a look at Digital Audio broadcasting or DAB. This high-tech system is in the wings and should be here near the end of the century. A few systems have been proposed for dab and a standard hasn't been decided as of yet. Our guest will be Ted Schober. Ted has been on the leading edge in the world of DAB and will give us a look into the radio of the future.

On Saturday June 11'th we will take a look at VSATS, (very small apachure earth terminals). Vsats are the newest high-tech method of satellite communications. Our guest will be Bill Septmeyer. Bill is an engineer and founder of National Supervisory Network (NSN). Nsn is on the cutting edge of this new communications technology. So join us on the 11'th of June when we take to the sky on Spectrum.

On Saturday June 19'th Spectrum will celebrate its one year anniversary with a special show. You'll just have to tune in and find out what happens.

--
Spectrum airs live Sunday at 0200 UTC (2200 EDT Saturday) on:

WWCR, 5810 KHz, Nashville, TN (World Wide)
WIFI, 1460 AM, Florance, NJ (Philadelphia Area)
KHNC, 1360 AM, Johnstown, CO (Denver Area)
Omega Radio Network, Galaxy III, X17, 5.8 MHz WIDE audio. (Satellite)

Spectrum is rebroadcast:

Sunday at 1500 EDT, on WIFI, 1460 AM, Florance, NJ (Philadelphia Area)

Well, I can sympathize with their attitude. Many no-clue technicians in this area are simply CB operators extending their available channel selections. Perhaps the same is true in your area, I can't say.

You might want to try writing a letter to the trustee explaining that you are a new ham and the coverage is excellent for your needs, ask how to join, here is an SASE, your repeater is so nice kissy-kissy brownnose, etc.

You may be surprised at the response you get. For instance, I am relunctant to let anyone on my machine, but if you ask politely generally I say yes (I've only said no twice). And, despite my vocal opposition to the no-code license, the dominent license class held by users of my machine is the no-code tech.

Good job Andrew and a good report on RFI from water heater
(or is that watter? :-)) energy saver.

I ran into a problem during a QRP QSO Party test several
months ago. I usually operate on 40M (7.040MHz area) during
a contest. This time I decided to bop up to 20M (14.060MHz
area, just between the digital crowd and the county hunters).

Well, wouldn't you know it, some lid has a carrier at
14.06000000MHz, S9+ and rock steady. Band was bad anyway,
so back to 40M or QRT.

Next day --- same song same verse. I say to myself, no body
is that stupid. Must be something in house doing this. So,
around I bop turning off anything and everything electrical.
Sure enough, one Panasonic ansering machine which had not been
on during the last contest. (*&@#$#$ thing to the trash.

I refuse to give up the frequency to something that I dislike
in the first place. People should talk to people anyway. :-)

That is absurd! One of the control ops for W6UE is a tech, and all licensed
amateur operators who exhibit good operating practice are welcomed there.
A quick check of the callserver shows that W6UE is the club call of the
Caltech Amateur Radio Club. About the only restriction I have ever heard
is for operators to be considerate of the co-channeled repeater which has
a significantly overlapping coverage area. You either misunderstood something,
talked to an impostor, or are making this up. I daresay you will _NOT_ be
welcomed there after an insulting post like this.

You're right, Randy, but unfortunately this is the way of the world. The early pioneers moved out west to get the wide open land there. As it became more and more accessible, "regular people" began to clamor for that land, and by force of sheer numbers, they got it. Eventually there was no more open space left (watch out, Canada!), and the US is/was forced to learn to operate within the new constraints. This is/will happen with radio spectrum as well. We can argue until we are blue in the face about what is right and wrong, but it would be a BIG mistake to let an attitude of righteousness open us up to being caught with our pants down when reality hits. Like it or not, the frontier of 440 has become accessible, and "regular people" are moving in. The mindless mass of people will not be affected by rational argument, so what exactly is the point of this exercise? They will take what they want, and it is we who will have to adjust to them. All the tantrums in the world (well documented on rec.radio.amateur.misc) will not affect that, so what are _WE_ going to do to maintain systems that we like in the face of it?

And why isn't the JPLARC on 1.2GHz?

>would've fared any better.

Don't be so sure... ...the tales I've heard of 6146B's being roasted and living to tell of it, without so much as going 'soft,' will curl your hair.

White-hot plates for minutes on end, frying other nearby components, and doing everything but melting the envelope, and they still hung on. An RCA 6146B was a tube that had evolved into one tough sumbitch.

The difference between these critters and sweep tubes is three-to-one in the books, and seems to be far more than that in practice. I was always surprised that Drake elected to stick with the sweep-tube final, when they could have easily shifted to 6146's (or something more exotic, and perhaps just one of them), especially when they were notably on the high end, both in quality and price... ...it was Collins, not Swan, that they were really up against. Then again, by the time the 4C came out, perhaps their design and engineering focus was on what was to be the 7-line.

Still, I wouldn't steer a newcomer away from a TR-4C or FT101 as an interim rig.

Mike,

> The FCC has stated that repeater owners have always had the authority to deny
> individuals access to their repeater.

There is no question about this. The repeater owner can turn off the machine whenever they choose to do so. I think the key word here is that the trustee must deny the access -- which to me means more than saying "Get off the frequency - we own this one."

> If someone knowingly takes steps to key a repeater, even though
> they have been told not to, then that is intentional interference.

Can you support this statement by other than your own opinion, if the attempted usage of the repeater is not malicious?
I would be very interested in any case where the FCC has held that attempting to use a repeater is considered "malicious interference". My personal contention is that PL today is not an access-restriction mechanism -- almost all new rigs include encoders and many open machines require PL to reduce interference from other services keying the repeater.

> However, we're not speaking simply of actions, we're also speaking of
> intent. Someone may choose to operate simplex on my repeater input,
> and use the same PL as I have on my machine because it happens to be
> the same as one they use elsewhere. Does this become intentional
> interference?

A good question, and I would be interested if you have any evidence from the FCC's rulings to support your contention that attempting to use the repeater is interference. According to the FCC, as you've already stated, there really is no such thing as "open" or "closed" repeaters. Anyone can shut off their repeater to anyone else. Where we differ is on the issue of whether it's malicious interference to try to operate within the rules on a "closed" machine that readily responds to all users (or all users with the proper PL).

The Dallas HamCom will be held June 10, 11, 12 at the Arlington
Convention Center in Arlington (between Dallas and Fort Worth.

This is a really good ham fest with a large indoor flea market (and an
outdoor overflow) and many, many commercial exhibitors in a separate
area. There are, of course, some good show-specials to spend your money
on.

It starts Friday afternoon, peaks on Saturday, and is much lower key on
Sunday. If you need a hotel room, call right now or you will not be able
to find anything reasonably close.

>I've done this right at the terminals, so I know I'm going right to
>the cells, not through a blocking diode.
>Any suggestions?
>

I have not read the 73 magazine article, so I can't comment specifically
on it. However, in general, constant voltage charging of NiCad
batteries is dangerous, unless the current is limited to some
safe value.

NiCd batteries have a negative voltage coefficient with charge -- that
is, as the cell reaches full charge, the terminal voltage falls. This
is the principle behind the deltaV fast chargers. As the cell reaches
full charge, the temperature rises rapidly due to the internal oxygen
cycle. This reduces the potential of the positive plate and the terminal
voltage drops. If you are using a constant voltage (near zero impedance),
this means that as the cell reaches full charge, and warms up, the
cell voltage falls, and the current increases -- this leads to thermal
runaway, and a vented cell (lost capacity) or in the worst case, boom.

Anyhow, the magic voltage is 1.48V +/- 0.05,
which is the electrochemical potential of the cell when oxygen
evolution at the positive plate occurs. At
voltages above this, one needs to be careful of cell temperature.
(the magic voltage has a temperature coefficient that depends on
electrolyte and other factors, but should be accurate near 25C).
This is the maximum voltage one can charge a NiCd cell without
worrying about heating effects (i.e. oxygen evolution at the positive
electrode).

Unfortunately, the positive electrode doesn't reach full charge at this
voltage, and a considerable overvoltage is necessary to force the
positive plate into its highest oxidation state -- the number 1.63 sticks

in my mind. This of course, means that some degree of oxygen evolution is necessary to reach a charge. Floating a cell at 1.63V will result in disaster as it will overheat and vent. This is why constant current charging is recommended. You automatically get a balance between the oxygen cycle and cell temperature and cell voltage.

You mention pulse charging -- these are usually pseudo constant current devices. The pulsed current is delta temperature driven. Start with a high current, and as the cell warms, lower the peak current. You control the circuit by looking at the open circuit voltage during the off phase of the peak. Unfortunately, there is no formula for the cutoff voltage, as the OCV during charge fractions of a second after the charging pulse is removed is very dependent on cell geometry (concentration and mixing effects). There is a Eurpoean patent on this method: 0 311 460 (A2), Norvik Inc. 10.10.88

Good luck.

Ken

: the bucks for QSLs. It's one thing to contribute voluntarily for an
: expedition (which I frequently do). It's another to "extort" money by
: REQUIRING a donation for a QSL. This practice should be banned on
: ethical grounds by ARRL.

: Let see how fast these guys change their
: practices if their expeditions don't count for DXCC.

An example of changing their practices: they STOP going on DXpeditions?

Would that be a bad thing? IMHO, yes. Just how much money "raking in the
bucks" do you figure a guy like DJ6SI makes (NET) anyway?
Should we prohibit DXpeditioners from collecting any funds whatsoever?
Why be so concerned that somebody is making some money? Is there a
problem in helping, whether by request or demand, to make a contri-
bution to the costs of his going to some out-of-the-way locale?
How much "fun" is there in going to VP8SSI where the DXpeditioners
came close to becoming premature silent keys? We're not always talking
about stopping of in some wonderful tropical island with a three or four
star hotel, ya know.

How's about we let these guys go off to Peter 1 or wherever Baldur
wants to go .... then, instead of sending in money for a QSL .. we
simply give up the whole practice of QSLing for DXCC? That's right,
let's use the "honor system". If you say you worked 'em on 160m -
that good enough! It gets rid of the (relatively) high cost of QSLing
AND saves a lot of time in updating your DXCC totals.

There are exceptions to the rule than fill-size is always better.
Suppose you compare a low-lying full-size dipole with a tuned loop.
The loop can be >80% efficient, and with vertical polarization has
lower angle of radiation. If rotated, it won't have null areas like
the dipole. Thus it may outperform the full-size dipole.

Once I compared with an attic dipole (20 ft up) and a home-made loop
(6 ft up, 3.5 ft diameter) on 17m. While ordinarily there was little
difference in signal strengths, there was a large difference when the
band was closing. Namely stations that could be heard comfortably
with the loop were buried in noise with the dipole.

In another example, our shortened Butternut beam behaves much better
than an oversized Butternut vertical on 20m. The beam, which shows
little directivity if any on 20m, is not only slightly louder but has
much lower noise. Both antennas are at more less the same height.

So a larger antenna has a better potential, but it also could be
matched and sometimes outperformed by much smaller antennas.

Truly spoken like someone who's never used a small loop antenna.

My friend Rob, WA3ULH, the author of the article that ran in QST, has demo'd his loop for me and it works quite well. It doesn't quite hang with his A3S, but its performance is just about as good as he gets with his R7 (which is on the roof, not in the house where his loop is).
And for about $30 in parts, you really can't beat it for a multiband portable antenna. His "dummy load in the air" makes a hell of a lot of QRP contacts for him.

That's not what I said. The frequency coordinator must serve both the trustees of open and closed repeaters, as well as balancing this with the needs of those who want to put on new repeaters. If the frequency is already occupied, it makes absolutely no difference whether the system is open or closed. This frequency is occupied. Period. A coordinator can't let himself judge who is "more worthy" of a frequency. An attitude like this is guaranteed to get him sued.

>The current 440 coordination group has abused its authority recklessly.
>This can be seen quite clearly by the disuse into which Southern Cal's
>440 band has degenerated.

I know some of the guys who started SCRRBA. I don't think there's any secret conspiracy here. They did what was needed at the time. Times change and they may have to change, but they can't be expected to throw people off channels they've occupied for 20 years or more. Change must be reasonable.

>True, but the ones in Southern Cal are happy with the paper radios. If
>not, then why are they coordinated?

If this is truly the case, things should change. I suspect the problem is no worst in California than in other densely populated areas of the country.

It took the Texas VHF-FM Society some time to purge the majority of the "paper repeaters" from the database. It doesn't happen overnight.

What's the pattern of a small loop? How does it matter if you turn it
horizontal or vertical? Most of the ads show the AEA horizontal, and
the MFJ vertical.

If I well remember, a horizontal loop is an omnidirectional cloud
warmer if horizontal and close to ground. The take-off angle lowers
as the height increases. The pattern of a vertical loop is
cardioid, similar to that of a dipole. I believe a QST published
loop radiation curves a few years ago.

My wife and I have an ancient Midland 13-513 220 MHz radio that we use for a base station. It doesn't have a built-in PL encoder, one of the previous owners stuck on an aftermarket encoder. A couple of weeks ago it started flaking out on us. It will appear to be working--in fact it apparently is still able to receive the radar signals that the Navy so generously sprinkles around San Diego--but does not transmit or receive, at least not in the band it's supposed to be in. The problem has now gone from intermittent to a solid failure. I want to try to fix it, but to do so I need a schematic. Would anyone out there by chance have a schematic for this or a similar radio? Or even, has anyone out there ever *seen* one of these radios--it was given to my wife by a friend, we don't know who the original owner was, but it looks like about mid-70's vintage.

73's,
-Randy, KD6ULI

3278. Near new Cushcraft R-5 antenna for sale

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-02 21:28:00 UTC
From: jerryb@jerber.sandiego.sgi.com
Message-ID: <CqsGyp.GMp@odin.corp.sgi.com>
Source record: 265704

This antenna was only installed 2 weeks before my neighbor convinced me to take it down.

It's a Cushcraft R-5 vertical half-wave antenna, and covers 10, 12, 15, 17, and 20 meters. I've used it successfully on 40 meters with my antenna tuner, though most antenna tuners would admittedly allow you to tune up your bedframe.

Best offer of around $200 takes it. It's back in it's original packing and complete with all the original paperwork including blank warranty cards.

> withholding the tech-plus applications till last?

Jesse-

There's definitely either a misunderstanding or a foul-up!

First, if you already had the No-Code Tech, you WILL NOT receive a new license when you pass the 5 WPM code test, unless there was some other change involved. The FCC only annotates their files that you have passed the code test. For this special case, I don't think you have to use the "interim" call sign. But, I don't know this for sure.

Second, if there was some other action required with this application (change of address, call sign, et cetera), then much over two months is an indication of a problem. Since paper-work with a problem would have been sent back for resolution before now, you must assume it has been lost. Contact your VE for assistance.

: Hi, Joe. I was just reading the news - and listening to a net on the
: intertie when I came across your posting. For more info on the Evergreen
: Intertie, send a Self Addresses Stamped Envelope - #10 business size, to
: Jack Williams, 4303 Maltby Rd, Bothell WA 98012. I have no phone number.

Be aware that the usage of this system very structured and that any variance
from the "offical" method often results in a lecture from an
Annally Retentive Regulation Loving Kilocycle Cop.
IE: 3-10 minute time limit, Use the system to contact already known persons,
that is, no turning on the system to make a new friend in a distant town.

Also, most network nodes are kept in the "off" mode. A code control cheat
sheet is neccessary to enable the network for a QSO, and then disable the
network afterward.

It has value, but it could have so much more.

Dear Netters,

I wonder if anyone knows where I can find an article about building a receiver for the MSF long-wave time-signal radio station, located in Rugby, England.

Yes, I am an experienced builder of electronic circuits, but I don't have the knowledge to think up a good-quality receiver by myself and would thus like to look at some examples.

TIA. Private email OK and preferred.

Kindest regards,

Frank

Hmm, I think it would be more of "theft of services", just like the
satellite operators would like to enforce.

Only there is a problem. How can you have theft of services for a
defined non commercial repeater??

We have had this debate a hundred times in this group.

I will refrain from the detailed analogies that don't change anyone's
mind anyway.

It will be interesting to see if you can get a court to enforce anything
outside of FCC regulations.

Sounds like a waste to $$, and a black eye to ham radio to me.

>
>It took the Texas VHF-FM Society some time to purge the majority of the "paper
>repeaters" from the database. It doesn't happen overnight.

With the loss of the bottom 2.150mhz of the 220 band (remember the 150khz was given over to weak signal thus costing 6 more repeater channels to be lost), the 220SMA has instituted the policy of requiring all repeater owners to re-register their systems every three years. Systems that do not exist or do not submit the required paperwork will be decoordinated and purged from the files. Should a frequency appear unused, they will not recognize any system which is not coordinated and will not deal with the operator of an uncoordinated system that moves onto that frequency pair until they vacate the pair. If you find an abandaned freq, you can submit a request for coordination requesting the pair; however, if there is another group ahead of you in the request line and they are in the same coverage area, then you more than likely will not get the freq.

In other words, don't put up a repeater and then tell them that you have done so. They already have proof that the FCC will side with the coordinating body over a single renegade user. (I can't state exactly what the proof is other than that we were sited examples at the last 220SMA meeting.)

DX Bulletin 33 ARLD033
From ARRL Headquarters
Newington CT June 2, 1994
To all radio amateurs

SB DX ARL ARLD033
ARLD033 DX news

The items in this week's bulletin are courtesy of Steve, W9NUF, Bill, KG4GC, George, AD1S, the Ohio/Penn DX Bulletin and the Yankee Clipper Contest Club PacketCluster network.

YEMEN. 7O1AA was worked Wednesday on 14245 kHz at 1500z.

LIBYA. A group led by JA2JPA plan to operate starting around June 10. It has been reported that equipment has been shipped to Libya and QSLs have been printed, though no call sign was mentioned. JA2JPA is currently in South America and is expected to return to Japan on June 14.

GHANA. 9G1PW was worked on 21297 kHz at 1430z. QSL via WB2YQH.

AFGHANISTAN. YA/RW6AC checked into the 14226 DX net around 2345z. No documentation has been received for this operation.

IRAQ. YI9CW has been quite active lately. Check 18074 kHz between 1400 and 1500z.

CAMBODIA. XU7VK should remain active through February 1995. Watch the usual DX frequencies.

KERGUELEN. FT5XJ has been on 20 meter SSB this past week. Listen between 14170 and 14200 kHz at around 1800z.

TONGA. Paul, KK6H, is signing A35RK. Try 14023 kHz between 0000 and 0400z, and 21024 kHz between 2100 and 2400z.

ANGOLA. D2/HB9AMO is active and should remain so through July.

FRENCH POLYNESIA. FO0MIZ is QRV until June 11 from the Marquesas. He was worked on 30 meters around 0430z. QSL via JA1HGY. FO0AKI is also active and has been worked on 40, 20 and 17 meters. Check

14195 kHz at 1100z.

SOLOMON ISLANDS. Mako, JA1OEM, is on the air as H44/JA1OEM until June 10. Check 30 and 40 meters between 0715 and 0900z, and again from 1030 and 1430. He has also been on SSB from 1300 to 1345z between 3788 and 3798 kHz.

PACIFIC DXPEDITION. Yarl, SM6FJY, leaves Angola on June 5 to embark on his Pacific tour. The planned itinerary is as follows. Mariana Islands, KH0, June 13 to 26. Guam, KH2, June 27 to July 10. Belau, KC6, July 11 to 24. After Belau, it is back to Angola until August 18.

EGYPT. Pavel, OK2FUN, signed SU1KR during the WPX contest last weekend. QSL via OK2EC.

JORDAN. Five British and one German operator are on from Jordan until June 27. Activity is mainly on 6 meters, though some HF operating is planned. QSL JY8ED via G3SED, JY8JH via G0JHC, JY8IC via GJ4ICD, JY8OX via G3KOX, JY8VA via DL7AV and JY8ZC via G4CCZ.

MICRONESIA. Six OKDXA members will have four stations up and running from June 8 to 17. QSL V63AD, V63BC, V63FC, V63KW, V63SB and V63VA all via OKDXA, PO Box 88, Wellston OK 74881.

SOUTH KOREA. Harry, HL9HH/KJ6YR, is looking for 40 and 80 meter fills for Worked All States. He operates between 1030 and 1200z daily. On 40 meters, he operates between 7002 and 7009 kHz looking for IN, MS, NM, ND, SD, and NE. On 80 meters, he is on between 3502 and 3509 kHz, hunting IN, WI, MS, IA, ND, SD, and NE. Skeds can be arranged via email to his Internet address hherr at emh.osan.af.mil. QSL via PSC 3 Box 3695, APO AP 96266-3695.

GUANTANAMO BAY. Bill, KQ4GC, will operate from the shack of KG4DX from June 10 through 16. Possible call signs are KG4GC, KG4WW or KG4ZZ. QSL via KQ4GC.

Or, which microphone to pick up. If you a different radios for each
band, like 6m, 2m and 70cm, you may need to carefully pick up the
correct microphone. One friend of mine takes his radio in his company
car, which has a company radio in it, too. Only a few times has he
grabbed the wrong microphone, and neither the amateurs or the Highway
Patrol dispatchers have complained. :-) He tends to pop out and tease
amateurs that brag about their speed, though....

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 2/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 2 JUNE AND FORECAST UP TO 5 JUNE

IPS Warning 15 was issued on 26 May and is still current.

1A. SOLAR SUMMARY
Activity: No data available

Flares: No data available

Observed 10.7 cm flux/Equivalent Sunspot Number : No data available

1B. SOLAR FORECAST
03 June 04 June 05 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 70/05

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 1 June
Learmonth 19 3344 3343
Fredericksburg No data available No data available
Planetary No data available No data available

Observed Kp for 1 June: 4455 3333

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
03 Jun 30 Unsettled to active, with brief minor storm periods.
04 Jun 30 Unsettled to active, with brief minor storm periods.
05 Jun 20 Unsettled to active.

2C. MAGNETIC COMMENT
Disturbance expected until 7 June due to a coronal hole.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

02 Jun normal normal-fair fair-poor
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Jun normal normal-fair fair-poor
04 Jun normal normal-fair fair-poor
05 Jun normal normal-fair fair-poor
3C. GLOBAL HF PROPAGATION COMMENT
Global HF propagation conditions remain affected by continuing
geomagnetic activity.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 02 June: 18

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
03 Jun 20 Near predicted monthly values.
04 Jun 20 Near predicted monthly values.
05 Jun 20 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Local propagation conditions appeared better yesterday than
originally forecast. Conditions may be degraded over the next three
days due to night-time Spread F and ocassional Sporadic E layer.

Source record: 265751

In article <2sja4j$lni@abyss.West.Sun.COM> myers@cypress.West.Sun.COM writes:
>
>It is common human nature for insecure, unhappy people to deride others.
>Too bad some have to cope with their frailties by condemning others, no?

``Physician, Heal Thyself.''

I knew the Defender of Radio Lawbreakers would eventually surface. You
came to Bly's defense in December when he bragged about operating
without a license, and now in June Bly resurfaces and so do you.

I will continue to publicly condemn those who intentionally break the law;
if you choose to hid your head or deride me then you, in effect, are indirectly
condoning their behavior. I'm very secure and very happy but I won't let
that stop me from condemning someone who does wrong. I'm sure that
you scold your children when then do wrong; does that make you an `insecure,
unhappy' person?

Now, concerning HF CW, to the uninitiated, DX pileups might sound as if
everyone is jamming one another but there is a sense of order in all
those hetrodyne squeals. Music to my ears!

A CW station jamming a SSB net? Is it possible the net started right on
top of a CW QSO? You would had to have been parked on that freq prior
to the start of the net to conclusively call it jamming. It's possible
that the two CW stations were trying to continue their QSO under the
SSB net (maybe it was even a CW net that was there first).

73 Dana and good luck on the 20M rig!

Jeff NH6IL

>to posession of property. Think about it...

Part 97 simply explicitly states that the trustee of a repeater may deny use of the repeater to other amateurs. It does not make it illegal, or even trespassing, for an amateur to use a repeater without the trustee's authorization.

I am *not* against closed repeaters, no matter how distasteful they may be.

I *am* against people twisting Part 97 to suggest that a person can gain ownership of a frequency by gaining coordination. Part 97 explicitly and simply states that isn't the case, no one owns a frequency.

I think it is a horrible and ugly precedent for civil courts to start encroaching on Part 97. Either amateurs *want* Federal pre-emption or amateurs *don't want* Federal pre-emption. We seem to want it when we want a tall tower (i.e., PRB-1 cases) but we seem to not want it when we want to gain exclusive control of a frequency (i.e., CLARA case).

At the same time, it is illegal to maliciously interfere with amateur communications. Part 97 is clear about this.

What is Bly doing? I don't know, I haven't heard him.

>small loop and 150w in the last 3 yrs don't count ...
>

Not to mention that even a dummy load can radiate enough power for a QSO. ANY antenna will radiate power, no matter how small, so long as its properly matched to the rig. Anyone who doubts it should read Maxwell's excellent book "Reflections," or any of Kurt Sturba's columns in World Radio.

Not exactly, Michael. The FCC has stated that a repeater trustee may
limit access to his equipment. It is not illegal for an amateur to
operate on a frequency his license grants. It *is* legal for a repeater
trustee to make his repeater only operable for selected individuals.

I spoke with an FCC PRB official about this very subject, and he concurred
with this interpretation. No one has exclusive access to any amateur frequency,
but no one is compelled to operate an open repeater.

>You're a good example of why we should have caneing in the US.

Well, Bly may not be tactful, but look at the examples he has on the
Usenet :-).

>thing.

Even a small loop antenna is "the real thing." It may not have the efficiency of a full-size antenna, but it WILL radiate a signal. For that matter, so will a dummy load. Any antenna that can be properly matched will radiate a signal.

I suggest you pick up a copy of Maxwell's "Reflections" and check it out.

>
Well Greg, at least It wasn't made up. If it seemed to be insulting,
it was not intended to be.

So far I have received two pieces of email and three postings about it.
The response from the folks affiliated with W6UE has been cordial and
constructive. This was undoubtedly a case of one operator who was tired
and just wanted us to go away at that moment. There are good reasons
why they might want to limit any big influx of people, that were
explained quite convincingly to me in mail from Michael Deignan and
from Douglas Reeves. It's unfortunate that one individual, whoever he
was, made the anti-no-code remarks to us.

To the good folks at CALTECH and JPLARC, I say I'm really sorry that
my comments caused you some public embarrassment. You don't deserve
that at all and I apologize for it.

Well, if the CLARA group keeps getting civil injunctions that pre-empt Federal regulation, PRB-1 will be moot.

Think about it.......

3297. Re: Loop Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-03 00:53:09 UTC
From: jsalemi@doghouse.win.net
Message-ID: <247@doghouse.win.net>
Source record: 265792

In article <hawley.770585983@aries>, Chuck Hawley (hawley@aries.scs.uiuc.edu) writes:
>What's the pattern of a small loop? How does it matter if you turn it
>horizontal or vertical? Most of the ads show the AEA horizontal, and
>the MFJ vertical.
>

Loops are strongest in the plane of the loop, and have a null perpendicular to the loop. Horizontal mounting makes it omnidirectional, and vertical gives you a null in two directions that's good for cutting down local noise sources.

Since the loops primarily operate on the magnetic portion of the radio wave, it sometimes helps to try both orientations and see which is best for a particular location. This is especially true if the antenna is within 10-20 feet of a large mass of metal (metal roof, fence, etc).

>Gary, are you arguing that the long-standing coordinations of closed systems
>are somehow invalid or at least less valid than those of open systems?

Yes, that's exactly what I'm saying. The spectrum is a limited public resource. Closed repeaters don't serve the amateur community at large as well as open systems, so as a policy matter, open repeaters should be the preferred occupants of the spectrum.

I recognize that closed systems are legal, but I don't consider them desireable. As spectrum management policy, spectrum should be allocated to serve the needs of the largest number of users. Since open systems don't place limits on who can use them, they make their chunk of spectrum more accessable to more amateurs than closed systems do.

Greater than 2 MeV Electron Fluence for 01 JUN is: 1.3E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. There were no significant
events observed. The sun remained spotless. Today's 10.7 cm
solar flux measurement of 67.6 sfu is the lowest since June
1986.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at mostly active levels for the past 24 hours. High latitude stations reported major to severe storm levels between 01/0600 UT and 01/1200 UT. Activity is most likely due to a well positioned coronal hole. Energetic electron flux (GT 2 MeV) ranged from normal to very high levels over the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be unsettled to minor storm for the first two days of the forecast period, then at mostly active levels. High latitude stations should expect periods of major to severe storming during local nighttime.

Event probabilities 02 jun-04 jun

Class M 01/01/01

Active 15/15/20
Minor Storm 30/30/25
Major-Severe Storm 30/30/25

HF propagation conditions continued below-normal over most regions today. Again, transpolar and transauroral paths experienced the heaviest degradation in the form of fading, multipathing, and absorption. Conditions are not expected to change significantly over the next 72 hours, through 04 June inclusive. However, middle latitude paths may begin to see weak improvements on 04 June.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
31 May: 2026 2030 2034 B4.2 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,

Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

3303. Periodic Announcement - ARRL Email Information Server (info@arrl.org)

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-03 03:00:06 UTC
From: mtracy@arrl.org
Message-ID: <rec.radio.info-arrl.email.info_770612404@ve6mgs.ampr.ab.ca>
Source record: 265798
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.info

Periodic Announcement - ARRL Email Information Server (info@arrl.org)

The services that the ARRL provides via the internet include the
Email Information Server and the Technical Information Service.
The Information Server is an automated mail server that gives you
access to many of information files relating to various facets of
Amateur Radio. You can retrieve any or all of these files by
sending an email message to info@arrl.org here at ARRL HQ.
Each file you request is then mailed to you automatically.

To use it, mail messages to:

info@arrl.org

Each line of the message body should contain a command as shown below.
The subject of your message is not processed and may be omitted. You
may place as many commands in a message as you want. The files you
request will be sent to you in separate messages. Only ASCII text
files are supported.

Valid INFO commands:

reply <address> (may be needed - see below for explanation)
help
index
send FILENAME (example: send prospect.txt)
quit

In the above message example, "help" retrieves a brief set of
instructions for info, "index" retrieves a list of available files
and "send prospect.txt" retrieves a text file containing information
on becoming a radio amateur.

Note to users with FTP capability: All of these files are also
available by anonymous ftp to oak.oakland.edu in the
pub/hamradio/arrl/infoserver area. Retrieve the file index.txt
in the /league sub-directory for a complete listing of available
files.

If you want to retrieve several text files with one message, use a
separate line for each "send filename" request.

Your From: field or Reply-to: field in your header should contain a
valid Internet address, including full domain name. If your From:
field does not contain a valid Internet address, the answer will not
reach you. If this is the case, then use the reply command as shown

above. When needed, this command should always be the first command in your message.

IMPORTANT: Please use the quit command in your message. This will prevent processing errors from message signatures.

PLEASE NOTE!: This is an automated system not capable of handling written requests. Any questions on the info-server or the content of any of its files should be directed to mtracy@arrl.org.

ALSO NOTE!: Do *NOT* reply to messages sent from info@arrl.org - the reply address is redirected to keep bounced messages from endlessly looping. Write a new message to info@arrl.org instead.

The Technical Information Service gives League members on the internet better access to the knowledgeable technical staff here at ARRL HQ. Questions relating to Amateur Radio and related technical topics are welcome. To use this service, send a normal e-mail message to tis@arrl.org with your question spelled out in plain english. For best service, be as specific as possible and keep your line length in messages to a maximum of 80 characters. Due to personnel limitations, priority will be given to questions from League members.

Best Regards,

Michael Tracy, KC1SX, ARRL Technical Information Services Coordinator
(e-mail mtracy@arrl.org)

Sample of files available from INFO: (There are lots more!)

Note - If you are not yet an Amateur Radio operator retrieve the file prospect (send prospect) for information on how to easily get started in this fun hobby.

Ken,

Just because a repeater is open doesn't mean the trustee is necessarily
out of touch with the users. The local ham groups run open repeaters on
2-meters here. Pretty much anyone using them are members or are known by
members -- all of whom are known by the governing board of the club.

It's not illegal to discriminate, unless that discrimination is based on
some kind of protected class (race, religion, sex). If the coordinating
body wanted to work toward some kind of balance, they could legally set
up open/closed restrictions on who they approved as long as such a policy
was otherwise fairly enforced.

>Thanks...
>Greg N0ODQ

About $10 for the plates plus whatever "agency fee" ($2-3).
The form is available from the state department of licencing in
Olympia, but more and more of the licence agencies are keeping
a few on hand. The licence plates are yours as long as you hold
a valid Ham licence.

I've transferred mine through four cars, causing much fun and merriment
for the records types.

BTW, don't let them confuse it with the "personalized" plates. They are
$30 per year in addtion to the regular licence and tax each year.

Ham plates are a one shot charge.

>BS> reduced mail rate. The cut corners are the equivalent of an
>BS> unsealed envelope.

>Why would an unsealed envelope be cheaper?

Have you never mailed anything at the "Printed Matter" rate?
If you do this, you can be challenged to open the envelope and
demonstrate that it really contains only printed matter. If a
country has a cheaper rate for mailing QSL or other cards, then
cutting the corners off the envelope allows the postal cops to
check that you are really mailing a card, and not chocolate or
live snakes.

Australians can send cards at a cheaper rate if they write
"card only" on the outside of the envelope, and leave it
unsealed (as mentioned by the earlier poster). Most of the
xmas cards I get from Oz are sent this way (cheap relatives).

Perhaps the real question is why it should be cheaper to
mail a QSL card than the equivalent weight of hand-written
love letters, or said snakes. The idea is that it is less
urgent, and can be delayed if necessary, thus you get a price
break.

The Texas VHF-FM Society has a similar policy. They renew the coordinations
annually, and three months of inactivity is grounds for decoordination.

Texas had a big problem with "paper radios" with I was on the Board of the
Society. We adopted rules which allowed the coordinators to review and revoke
the coordinations under certain circumstances. It's worked pretty well, and
most of the "paper" has gone away.

Not illegal, maybe, but certainly unfair. A coordinating body that refused to
coordinate a frequency because the trustee wanted a closed repeater would
almost certainly be sued, or another competing organization would spring up
which would accomodate everyone.

As long as there is a demand for frequencies, this discussion will be held.
The thing which should be considered here is not whether the system is open
or closed. What should be considered is whether the frequency is being used.

A repeater with no users serves no one. If a radio has users, it should make
no difference to the coordinator whether the radio is open or closed. A
coordinator is just that... a _coordinator_. He cannot be asked to judge
who is "more worthy" of a frequency. Either the frequency is used or it's not.
His job is to minimize interference between coordinated systems.

>be the preferred occupants of the spectrum.

This is your opinion. I respect it. I also disagree with it. If a repeater serves 200 users, what difference does it make if those 200 users pay dues to a closed system or just showed up on an open one?

The point here is: Is the frequency being used? If so, what difference does it make of the system is closed? If the frequency isn't being used, then the fact that the radio is closed or open again makes no difference.

There are open systems in Houston which get little or no use. Certainly much less use than my closed system. Am I to be declared "less worthy" even though my radio is used more? That dog won't hunt.

UI>thanks,
UI>ke4edy

UI>p.s. we also have an opportunity to purchase our own 2 meter repeater
UI>station. any advice on this??

Hi! Good luck with the new club...it does take a lot of work, but is
worth the effort. I've been in a number of clubs over the last 20 years,
and have seen a few things happen almost every time. These would
rock the club nearly off its feet, and then the club would usually
(slowly) recover...a little smarter. Perhaps you can avoid it
altogether...

1- Try to distribute responsibilities across the membership. This is
hard because there are usually only about 25% or so that really want to
work. Be sure to include those that suggest that "we" should do this
or that in whatever that task might be. I've seen those that didn't want
to do anything suggest all sorts of stuff, and turn around and accuse
those who do it of being in a clique (sp?). Be careful...cliques do form
very easily, even without realizing it. Rotate officers and try not to
let the same people hold an office more than one term...sometimes people
will get a feeling of ownership this way.

2- Hold regular ham radio classes...maybe one session annually. New
blood in the group is nearly essential.

3- When disputes arrise, step in and settle them immediately and openly.
Don't allow them to smolder. I've seen this split clubs up
completely...usually over what started off as a stupid matter. I was in
a club once where the repeater trustee felt he owned the machine because
he had sole access to the site (his site). It got to the point where he
would turn the machine of on: phone patches, if he thought you could
have stopped at the phone booth; conversations that he disagreed with
the opinions or topic; people he didn't like; etc. It sorta gets back to
the thing about span of control.

4- Plan group outings...field day, CW WW Phone contest stations, VHF/UHF sweepstakes team stations, trips to the local TV/Radio stations, etc. This will go a long way to bonding the group and bringing them closer together. Weekly nets on the local repeater or hf...just informal on-the-air meetings to keep everyone informed and stimulate activity in the group.

5- Where are you located?? 2 meters in our area is pretty jammed...you might consider another band. Maybe 6, 220, or 440...most of the members will be more likely to have 440 rigs than 6 and 220. Just a thought, and your local frequency co-ordinators can fill you in on the availability of a 2 meter frequency. I'd hate to see you buy a repeater, then not be able to get a frequency for it.

I hope this helps. It's nothing more than my own experiences...Any time you get a large group of people together, there will be differences to work out. The bad ones will usually weed themselves out, and the die-hards will still be around. The membership will try your patience from time to time, and you will need to get an answering machine to keep a little peace around the house :-).

73 de WB4IUY

X OLX 2.1 X ...it's exactly the same, only different...

>"more worthy" of a frequency. An attitude like this is guaranteed to get him
>sued.

Perhaps. However a significant number of amateurs believe that the 'closed'
repeater is contrary to the principle that no individual or group 'owns'
a frequency.

Those of us who feel this way 'tolerate' closed repeaters in the spectrum
where there is plenty of available space, on the premise that no harm is
done.

However, in areas where spectrum is becoming critical, we believe that the
band plan should dictate that OPEN repeaters have priority, sometimes to the
extent that even existing closed sites are offered the option of either
opening up or giving up the allocation. And we also believe that the
'band plan,' as developed by local and national organized Amateur Radio
groups has sufficient authority to dictate fair spectrum usage.

We believe that groups that put up closed repeaters must make this trade
off... ...that that is the price of exclusivity. Presumably, however, the
greater occupancy should offer them a better market for sale of the old
'machine,' should they have to move to 1.2Ghz.

The 'closed' repeater has been the counter-example to the 'no-one owns
a frequency' principle which has guided amateur radio for its entire
existence. I see no reason to turn away from the older principle in order
to keep the price of exclusivity low.

-How about protection from lawsuits related to TVI, telephone interference,
and other forms of RFI caused by poorly designed consumer products and/or
Part 15 devices operating on frequencies assigned to the Amateur service?

On a VERRRRRY loosly related subject, how about eliminating the
"industrial exemption" clause in your state's engineering registration law?
These exemptions, which most if not all states have, allow unlicensed
"engineers (who may not even have any engineering education or experience)
to practice as engineers as long as they only design manufactured goods. Would
you allow an unlicensed physician, who can only kill one person at a time to
practice medicine? How abount an unlicensed automtive "engineer" who could
kill many people with a single mistake?

Thanks, and good luck!!

I have had my OMNI VI for just about two years now. I ordered one
when TEN TEC first anounced it. In short it is without a doubt the
best rig I have ever used in my 33 years of hamming (I never had any
Collins stuff though). This includes a whole bunch of Rice boxes
(Kenwood, Icom, Yahoos) that I couldn't wait to get rid of! My
OMNI VI has made hamming fun again - something the rice boxes just
coudn't accomplish.

There is a place in Tempe, AZ (area code 602) called "Antique Electronic Supply"
that seems to have a giant tube offering. I didn't check their price on 6JS6
but I'd suspect $20 or so each. RS seems to be the highest price vendor.

FROM WA5QGD FORT WORTH,TX June 3, 1994
BID: $ORBS-154.D
TO ALL RADIO AMATEURS BT

Satellite: UO-14
Catalog number: 20437
Epoch time: 94148.77131663
Element set: 998
Inclination: 98.5887 deg
RA of node: 233.8092 deg
Eccentricity: 0.0010120
Arg of perigee: 249.2130 deg
Mean anomaly: 110.7967 deg
Mean motion: 14.29844035 rev/day
Decay rate: 2.6e-07 rev/day^2
Epoch rev: 22681
Checksum: 313

Satellite: AO-16
Catalog number: 20439
Epoch time: 94148.26783817
Element set: 797
Inclination: 98.5973 deg
RA of node: 234.5240 deg
Eccentricity: 0.0010441
Arg of perigee: 251.8891 deg
Mean anomaly: 108.1154 deg
Mean motion: 14.29897857 rev/day
Decay rate: 2.3e-07 rev/day^2
Epoch rev: 22675
Checksum: 339

Satellite: DO-17
Catalog number: 20440
Epoch time: 94148.22411695
Element set: 797
Inclination: 98.5984 deg
RA of node: 234.7976 deg
Eccentricity: 0.0010539
Arg of perigee: 250.6532 deg
Mean anomaly: 109.3505 deg
```

Mean motion: 14.30037363 rev/day
Decay rate: 1.9e-07 rev/day^2
Epoch rev: 22676
Checksum: 316

Satellite: WO-18
Catalog number: 20441
Epoch time: 94148.26905745
Element set: 799
Inclination: 98.5983 deg
RA of node: 234.8454 deg
Eccentricity: 0.0011068
Arg of perigee: 251.1899 deg
Mean anomaly: 108.8082 deg
Mean motion: 14.30011720 rev/day
Decay rate: 1.5e-07 rev/day^2
Epoch rev: 22677
Checksum: 319

Satellite: LO-19
Catalog number: 20442
Epoch time: 94148.24856903
Element set: 796
Inclination: 98.5963 deg
RA of node: 235.0753 deg
Eccentricity: 0.0011443
Arg of perigee: 249.3737 deg
Mean anomaly: 110.6220 deg
Mean motion: 14.30107631 rev/day
Decay rate: 2.3e-07 rev/day^2
Epoch rev: 22678
Checksum: 299

Satellite: UO-22
Catalog number: 21575
Epoch time: 94148.22067990
Element set: 500
Inclination: 98.4361 deg
RA of node: 223.1211 deg
Eccentricity: 0.0008131
Arg of perigee: 357.3213 deg
Mean anomaly: 2.7927 deg

A and B are two clauses of the same sentence. Rather interesting that the
phrase 'closed repeater' and 'accomodate everyone' can be used together,
I think. But typical of the convoluted logic which those who are reaching
to justify their monopolization of a frequency on a a crowded band.

However, 'B' is interesting. It is precisely the argument made by those
of us who advocate the right of open repeaters to displace closed machines,
when a band runs out of pairs. That is, a competing organization (for
frequency, not coordinator status) springs up, which will accomodate
everyone.

>Contact your VE for assistance.

Regarding the second point. The FCC is currently running 10-12 weeks delay from when the 610 gets to Gettysburg. Considering the 610 may take 1 to 2 weeks to process at your VEC, you can easily see delays of 3 months. 2 months is not enough time - DON'T CALL GETTYSBURG. You'll only add to the confusion. If you call the VEC under which you took your exam, they can confirm that the FCC is running behind recently.

Regarding the first point. Part of the FCC computer system upgrade was rumored to include provisions for maintaining information on technicians with code, and technicians without code. As it currently stands, the FCC knows not which techs have code and which do not, aside from those who obtained their license before the no-code tech license went into effect. Under the new system, they will be able to keep track, and the printed licenses will say whether or not a particular tech license is with or without code. I believe the FCC will be soliciting records from the VEC's from which to get the with-code or without-code information.

Maybe somebody from the League can provide more info?

>of the listener on a scanner. If you're not sure what freq. you're
>listening in on, ask. If someone is there you'll find out. If you're
>NOT sure, get new equipment or fix the broken readout on yours.

In general it's unnecessary, but things which are defined as "in
general" usually have exceptions. Take for instance the case where Bob
is monitoring a scanning receiver which is in another room. All of
Bob's friends know that he is listening on the scanner and that it
takes him a minute or two to come to the radio. In this case, the
calling parties will mention which frequency they're on so that if Bob
hears it, he'll know which frequency to tune when he gets back to the
radio. This is no hypothetical case - Bob, K7PYD is a friend of mine.

>Don't say "73s" or "73's" It's "73".

OK. All those who care please hold up your hands....

>Don't use Q signals on phone. Use plain english.

Ok. I will if you will. When running the Phoenix Arizona
swap net, it's sometimes easier to understand someone saying
"QSL" than it is to understand "uh huh", "yup", "Yeah", "uhhhhh,
OK", and so on. I don't ask people to use "QSL" but it does
not bother me when they do. The message is received and I move
on to the next listing.

>Those are just a few things they've told me.
>Over and over again. So, if these hams, who are 60+ years old
>are telling me this, and they've been around for 40 years or so,
>then obviously they disagree with your ideas.

So what? Everybody disagrees with everybody. What else is new?
40 or so years of being anally retentive doesn't mean much to me.

>Talking about CW using CW abbreviations is fine. But, when I'm
>on phone, I don't like to hear "KB8SGL, what's your home QTH?"
>Ask me "Where are you located? Where do you live?" Plain English.

I have to agree. But I'll not embarass someone on the air and
make myself look like a butthead by pointing this out to them.

>Listeners to the ham bands on a scanner will woner if we're
>some bunch of wierdos who can't speak normally.
>We're not cops. We're not military. We don't need to use
>10 codes(some amateurs do this), Q codes, CW codes when speaking
>phone.

People do it in person, why not over the radio? When I talk about computers, I'll mention a VESA card and 8 meg of RAM. Should I have said, "A Video Electronics Standards Association card and 8 Megabytes of Random Access Memory"? Every hobby and activity has it's lingo. Ham radio is no different.

>I'm a football official. Each year, every week, almost every day,
>I glance at my rulebook. I read it. I read the casebook. The
>official's manual. I want to know the NEW rules, the NEW applications
>and how it's done NOW.

Oh. So you're a professional whistle blower and this is just another game for you. Well, guess what, it's fourth quarter and most of the audience has already left the stadium. Not many will hear, or care, about your next call.

>But, I get these 20+ year veteran officials who think that since
>they've been around for 20+ years, they can do it their way,
>use their rules, interpret it their ways, since they've been around
>so long, naturally, no one will question them!

Welcome to amateur radio.

>This is ludicrous. We have a method of doing things. We have a way.
>It's not "Well, it's just the way it is. Don't mess with it"
>It's like saying "Well, he drinks, he fights with people, and he's
>always in trouble with the cops. But, don't get upset, you see,
>because that's JUST the way he is. "
>
>That line of thinking produces stagnation and promotes non-growth.

There's a big difference here. For starters, there is no rule anywhere that states that any of the above mentioned practices are illegal. Granted, they may be unsavory, but they're legit. For example, you can note that a linebacker is ugly, but you can't flag him for it. It's just not in the rules. You just shrug your shoulders and go on about your business.

Have a nice day. And remember, it's a Hobby!

You may not know it, but they already do! The Federal government employs
physicians who need not pass the licensing exam of the state they are
practicing in. I haven't noticed that the veterans are dropping like
flies from inadequate care, though.
Having worked as an 'unlicensed engineer' for RCA designing microwave
circuits (back when they still did that!), I don't see the need for
eliminating this exception. Perhaps you can cite some cases where
having passed the PE exam would have saved lives and reduced damages.

Yours, in curiosity,
cantrell

Right. How are you going to compensate the owners of closed repeaters - and
remember that, according to the FCC, _ALL_ repeaters are closed - for the loss
of their investment of time and money in building up their system? Remember
that, ESPECIALLY in Southern California, the hams that built their systems on
440, often at greater expense than they would have had if they were on 2, not
only for the repeater but also for their users' radios.

Any coordinating body that tries to take away folks' coordinations without a
good cause - and suddenly deciding that closed repeaters are less worthy than
open ones is not likely to be seen by a court as 'good cause' - is going to
get its collective butts sued off. I can cite at least one such body that will
not expose itself to that kind of liability: the one I'm currently a director
of, the Texas VHF-FM Society.

>We believe that groups that put up closed repeaters must make this trade
>off... ...that that is the price of exclusivity. Presumably, however, the
>greater occupancy should offer them a better market for sale of the old
>'machine,' should they have to move to 1.2Ghz.

Right. It may get them $500 instead of $250. Further, why should they trust
that their investment in all new gear, not only for the repeater but also for
the users, won't be similarly thrown away by the coordinating bodies?

>The 'closed' repeater has been the counter-example to the 'no-one owns
>a frequency' principle which has guided amateur radio for its entire
>existence. I see no reason to turn away from the older principle in order
>to keep the price of exclusivity low.

I don't claim that a coordinated repeater - open or closed - or its users own
a frequency. I do claim, and the FCC and courts back me up, that the trustee
of any repeater can legitimately prevent anyone he desires from using HIS
STATION! IT'S THE STATION, STUPID!

Actually, with the right circuit, you can reliably pull a fundamental
crystal 1000 PPM (i.e. +/-500 PPM). If necessary you can increase that
to 2000, 3000 or even 4000 PPM with some degradation of phase noise
and temperature stability. Similarly, 3rd overtone crystals can be
reliably pulled 100 PPM and 5th overtone crystals can be reliably pulled
40 PPM.

How do you do this? Build an LC Colpitts oscillator at the frequency
of your crystal (get it within a few %). Now, insert the following
circuit in series with the
emitter of the transistor: the crystal in series with the tuning diode
in series with an inductor which resonates with the diode at the xtal
frequency when in the middle of the diode's tuning range. Finally,
install a shunt inductor directly across the crystal such that it
resonates out the C-zero of the crystal at the crystal frequency.
C-zero is typically 5 pF. Make sure this inductor has a high enough
SRF (i.e. >> xtal frequency). Note that the finished oscillator has
3 inductors.

If you have starting problems, you might have a VHF parasitic oscillation.
The old trick with a ferrite bead on the base or collector will fix this.
A 2N5179 is a good transistor to use.

3349. RFD:Radio repair rip-off??

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-03 17:01:47 UTC
From: revco@YALE.EDU
Message-ID: <1994Jun3.170147.18537@news.yale.edu>
Source record: 265813

I'd like to get the groups opinion. Keep in mind while I know some
radio theory, I'm no repair person. Question: I decided to try
to get my original transceiver a Kenwood TS 520 back on the air.
In trying to tune up, there was basically no power output. So I
left it off a a local repair shop and told the owner I though it might
well need new finals and alignment. He charged me a $45 "bench fee"
which would not be refundable but would be credited toward the repairs,
and bascially sat on the set for a couple of weeks. They send the
work out to a technician. Anyway when I called back for the estimate
they gave me a quote of $225 to $250. It was apparent that they never
actually opened up the set, and that the quote was based on my
impression that it might need new finals and alignment.
So I was miffed that the so called "bench fee" estimate was not
based on their actually looking at the set, and that the estimate
appeared to approach 60% or more of the value of the transceiver
judging from prices I've seen posted for used equipment.
Perhaps I should have been more "aware" of the potential for losing
my money. My questions are: (1) shouldn't I have expected them to
have at least opened the set up for the $45; (2) could the repairs
really be expected to get into that range, assuming the worst.

Thanks for thoughts,

Jim Revkin KA1QJ revco@revco.med.yale.edu

What the hell are they doing trying to charge you $45 for doing NOTHING?
Honestly, I'd tell them that you expect your money back, or you'll tell
all you ham friends and EVERYONE on internet about how this place
screwed you for $45 for doing nothing at all...

This might conceivably "convince" them to waive the fee. They could have
gotten the estimate from your impressions without EVER seeing the radio.
Sounds like one hell of a racket to me. I'd threaten to bad-mouth them
so as to virtually kill their business of repairing stuff. And even if
they DID give your money back, I'd personally NEVER go back.

BTW, on your TS520, a pair of matched finals and a driver will run you
$75, max. The neutralization procedure doesn't take too long, and is
spelled out in the owner's manual. You radio, secondly, is worth about
$250-275 on the open market, so the estimate was more like 80-90% of
the value of the radio...

Scott NF3I Stuff like that has NO PLACE in ham radio.

Jim-

It sounds to me like you were hasty taking the rig to that particular shop. Are they a TV shop or something?

Regardless of how they do business, it isn't unreasonable for a shop to charge $30 to $50 per hour. It could take 5 to 8 hours of labor getting the set back in shape, barring unforseen problems. Such problems are likely in an old rig that worked when you put it away, but doesn't now.

Someone who likes to work on their own gear might do well with a TS-520. However, it has practically zero value to you, considering market value vs cost of repair. I suggest you mark the $45 up to experience, and cut your losses. If you chose to fight the bench fee (beyond initial pleading!), you would probably lose in court, and the emotional turmoil isn't worth it.

3357. GB2RS News 5th June 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-03 18:55:20 UTC
From: dave@llondel.demon.co.uk
Message-ID: <770694920snx@llondel.demon.co.uk>
Source record: 265822
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 5th of June and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

And we start this week with a special Good Morning to all those listening from National Field Day sites.

Today, the 5th of June, the RSGB invites all radio amateurs to attend a Regional Meeting at the Forte Crest Hotel, near Brighouse, West Yorkshire. Turn off the M62 motorway at junction 25 and go towards Brighouse, and the hotel is on the right a short distance from the junction. Coffee will be served prior to the meeting which is scheduled to start at 12.15pm. These meetings are for members and non-members of the Society to meet Council Members, Society Officers and staff to discuss the workings of the Society and amateur radio related matters.

In last week's bulletin we mentioned a number of special event stations which will be active during June to commemorate the 50th anniversary of D-Day. Here are some more:

GB50MN will be aired from the Paddle Steamer Ryde, used at Omaha beach by the US 5th Corps during D-Day, but now anchored at Island Harbour, Mill Lane, near Newport, Isle of Wight. The station will be on the air until midnight tomorrow, Monday the 6th. Operation will be CW and SSB on 160, 80, 20 and 15 metres bands and SSB and FM on 2 metres.

GB2DD will be operating from the Community Centre, Queens Way, Billingham, Cleveland by members of the Stockton & District Amateur Radio Group tomorrow, the 6th of June. Operation will be on all HF bands and 2 metres from 10am to 8pm, on Phone and CW.

GB50CR, Clandestine Radio, will be operated next weekend, the 11th and 12th by members of the Dacorum Amateur Radio Transmitting Society, with the support of the Royal Signals Amateur Radio Society. This is part of 'Operation Maquis' {pronounced Mah-Key} and the club will be using a restored B2 Transmitter/Receiver. Operation will be from 10am to 4pm each day, between 7.020 and 7.029MHz. The Great Yarmouth Amateur Radio Club will also be participating in 'Maquis' using the call GX3YRC/P.

Today, Sunday the 5th, the Radio Amateur Invalid and Blind Club (RAIBC) will operate as F/GB0IBC from Normandy on 3.74MHz.

A list of many of the Special Event Stations taking part in the D-Day celebrations appears in the June edition of RadCom on pages 6 and 89.

There will be another RSGB Microwave Round Table meeting on Sunday the 19th of June, organised by the RSGB Southern Microwave Group. The event

will be at the Crawley Amateur Radio Club premises at Pease Pottage, near Crawley, West Sussex, and it will commence at 10am. Attractions include: technical talks, calibration and alignment facilities and the usual round table discussions on matters of interest to microwavers. There will also be a bring and buy stand and hot drinks and snacks will be available. All are welcome. For further details telephone Mike, G3LYP, on 0494 881298.

The RSGB's Repeater Management Group has forwarded a batch of eleven repeater applications to the Radiocommunications Agency.

There are four new repeaters: GB3MX, a two metre repeater for Mansfield, in Nottinghamshire; GB3UY, a 23 centimetre speech repeater for York; GB3AT, a 24 centimetre television repeater at Southampton; and GB3XG, a 3 centimetre television repeater for Bristol.

There are seven applications for changes to existing repeaters: a frequency change for the Wolverhampton two metre repeater, GB3BX; and site changes for two metre repeaters GB3BM in Birmingham and GB3YC in Scarborough; and 23 centimetre speech repeater GB3MM in Wolverhampton. The batch also includes site changes for the three Stoke on Trent repeaters: GB3VT on two metres, GB3ST on seventy centimetres and GB3SE on 23 centimetres.

It is anticipated that the minimum time for clearance by the RA is three months for VHF and SHF, and six months for UHF units. As usual, the RSGB will inform repeater keepers of progress by distributing the RA's monthly progress reports.

There is still time to nominate someone under eighteen for the prestigious title Young Amateur of the Year. This annual award is sponsored by the RSGB and the Radiocommunications Agency, together with representatives from the amateur and professional radio industry. In addition to the title, the winner and runner-up qualify for a number of prizes. If you know of a young person who could qualify, do not hesitate to ask for a nomination form.

Full details of the Young Amateur of the Year award can be found in the April edition of RadCom, or can be obtained by telephoning Justine Hodges at RSGB Headquarters on 0707 659015.

An expedition to the Western Isles of Scotland takes place from next Sunday the 12th of June through to Friday the 24th. GM7BXA, GM7HSP and GM7DKX are scheduled to operate on VHF from the Isle of Mull on the Sunday, the Isle of Skye on the Wednesday, South Uist on the Friday, Benbecula on the Saturday and North Uist on the Sunday. Operation will start at around 9am and will continue until 10pm on the frequencies 144.222, 50.122 and 50.222MHz, plus the calling frequencies. HF activity will be provided by GM0NEB on 80, 40 and 20 metres CW and SSB. Details can be obtained via packet radio from G7DKX at GB7GBY.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO:

From Micronesia, V73C will be active as V63KW from Thursday the 9th of June. Duration of his stay is not known at this time.

From Taiwan, the special call BV0RI will be aired from next Sunday the 12th for four days during the Rotary International Convention in Taipei {pronounced Tie-Pay}.

And from Aruba, K9XJ will be active as either P4/K9XJ or P4OXJ from Wednesday the 16th for one week.

Now the rallies for today Sunday the 5th of June:

The Burnley Radio Rally is being held at St Peters Church of England Primary School, Church Street, Burnley. Doors open at 10.30am. The rally features trade stands, local club stands and a bring and buy stall. Refreshments will be available.

The Spalding Amateur Radio Exhibition and Rally is being held at the Springfields Exhibition Centre, Spalding, Lincolnshire. Doors open at 10am. The event features many trade stands and a car boot sale. Refreshments will be available.

Next the two rallies we know of for next Sunday the 12th of June:

The Elvaston Castle National Radio Rally is to be held at the Elvaston Castle Country Park, near Derby. The show ground is five miles south east of Derby on the B5010 road and is well signposted. The rally features over 150 trade stands, a bring and buy stall in a marquee and a flea market. Full on-site catering facilities will be available. Talk-in will be on 2 metres channel S22 and on 70 centimetres, channel SU22. Two live bands will give performances during the day and children's entertainments will take place throughout the day. Further information from Ken, G3OCA on 0332 662818.

The Royal Naval Amateur Radio Society Annual Mobile Rally is to be held at the Sports Field HMS Collingwood, Fareham, Hampshire. To get there, leave the M27 motorway at junction 11 and follow the A27 to Fareham. Doors will open at 10am. The event features dozens of trade stands, a bring and buy sale, a flea market and local club and repeater group stalls. Also featured is an arts and crafts exhibition and a range of entertainment for all the family. Refreshments will be available. Talk-in will be on 2 metres and 70 centimetres. Further details from Clive, G3YTQ on 0329 234143, evenings only.

HF contest news now:

The World Wide South American CW Contest is scheduled to start at 1500 next Saturday the 11th and finish at 1500 UTC on Sunday the 12th. The event covers all bands from 3.5 to 28MHz, excluding the WARC bands. See June RadCom page 19 for further details.

Next some VHF contest news:

The IARU 50MHz Contest will finish at 1400 UTC today, Sunday the 5th. See February RadCom page 83 for further details.

The RSGB 70MHz CW Contest takes place next Sunday the 12th of June from 0800 to 1100 UTC. There are three sections, Single Operator Fixed, All Others and Listeners. For further details see February's RadCom page 83. Immediately following this event, the second RSGB Backpackers 144MHz portable contest takes place. This is an SSB and CW event from 1100 to 1500 UTC. Full details can be found in the January edition of RadCom.

Also next Sunday the 12th of June, the third RSGB 24GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC. See April RadCom page 82 for further details.

And now the solar factual data:

The period from the 23rd to the 29th of May saw solar activity fall to very low levels with spot counts being zero on the last three days. Coronal holes are still causing trouble particularly at high latitudes. No flares have been reported. Sunspot indices have declined considerably, with the mean for the period being only 13. Not surprisingly, the solar flux has also declined, averaging 73 units. The 29th was down to only 69 units, the lowest level since February 1987. The 90 day flux mean on the 29th of May was 83 units.

As expected, geomagnetic levels have been up to minor storm levels at mid latitudes. At high latitudes levels reached full storm on the 28th and 29th. The 27th was the only quiet day. The Ap indices averaged 18.4 units for the period but reached 37 units on the 29th with more storms forecast. All the geomagnetic activity is due to suitably positioned coronal holes. The state has been 'nil, nothing to report' throughout the period. The daily aa indices, as supplied by the British Geological Survey for the 17th to 23rd of May, averaged 19.1 nanoTeslas, about K2. The 21st was very quiet with periods down to 5 nanoTeslas. The X-Ray flux levels have also declined, dropping to only A1.0 by the 27th with the period averaging A2.6 units. Bartels rotation 2197 begins June 10th.

I'll repeat the figures. Spots - 13; Flux - 73; Ap index - 18.4; X-ray flux - A2.6.

Now the ionospheric data for Central France:

Due to the holiday not all of the ionospheric data is to hand. For the period from the 24th to the 26th of May the F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged 7.8MHz and the darkness hour lows averaged 3.8MHz. The highs are still being reported around 2000 hours and the lows at 0400 hours.

I'll repeat the figures. Highs - 7.8MHz; lows - 3.8MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg averaged 5.7MHz and the darkness hour lows 4.6MHz.

I'll repeat the figures: Highs - 5.7MHz; lows - 4.6MHz.

And lastly the solar forecast:

This week the more active side of the sun will be coming into view. Solar flux levels are expected to be at about the 89s. Geomagnetic activity is expected to be very disturbed at first, becoming quieter as the week goes by. MUFs in the south during daylight are expected to be about 21MHz, with the darkness hour lows being about 14MHz. North/south paths will be best, and levels in the north will be lower, much depending on the geomagnetic disturbances. The peak time for sporadic-E is June and openings on 28 and 50MHz should be possible by this mode.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Whiskey and G7 Sierra Kilo series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Charlie series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast in the 80m, 40m, 6m and 2m bands.

>
>Right. How are you going to compensate the owners of closed repeaters - and
>remember that, according to the FCC, _ALL_ repeaters are closed - for the loss
>of their investment of time and money in building up their system?

The same way owners of AM stations were compensated when SSB became good
amateur practice. The same way the owners of spark sets were compensated
when CW became all the rage.

However, the owner has options and advantages:

1. He can open the machine; probably wouldn't change much,
as the people who 'hang out' on the pair probably will
continue to dominate it.
2. He can salvage the support and control systems, and utilize
them as the core of a new machine with different RF decks
up on a less crowded band.
3. He can sell the machine to the organization who will run it.

Such is the price of progress.

> Remember
>that, ESPECIALLY in Southern California, the hams that built their systems on
>440, often at greater expense than they would have had if they were on 2, not
>only for the repeater but also for their users' radios.

Yes. That's true. And they moved up because there was a shortage of room
on 144. Guess what? The problem followed. As it will inevitably follow
them to 1.2Ghz, after maybe a few good years. Such is the price of
exclusivity.

>Any coordinating body that tries to take away folks' coordinations without a
>good cause - and suddenly deciding that closed repeaters are less worthy than
>open ones is not likely to be seen by a court as 'good cause' - is going to
>get its collective butts sued off. I can cite at least one such body that will
>not expose itself to that kind of liability: the one I'm currently a director
>of, the Texas VHF-FM Society.

On the other hand, if amateur radio as a whole decides that open machines have
priority, and pre-emptive priority where necessary, with reasonable opportunity
to move, then the courts won't support any self-serving fool who decides to
buck progress.

>
>Right. It may get them $500 instead of $250. Further, why should they trust
>that their investment in all new gear, not only for the repeater but also for
>the users, won't be similarly thrown away by the coordinating bodies?

Yup. And they can trust just the opposite... ...they will continue to have
to go up-spectrum to get away from the crowds, just as the country is
becoming farther and farther away from down-town.

>I don't claim that a coordinated repeater - open or closed - or its users own
>a frequency. I do claim, and the FCC and courts back me up, that the trustee
>of any repeater can legitimately prevent anyone he desires from using HIS
>STATION! IT'S THE STATION, STUPID!

So if I decide to put an open repeater on the frequency of your closed
coordinated repeater in the same coverage area you believe that you must share
the frequency with me, if nobody is on your machine and I, for example, publish
my PL tones? And that, as control operator, you will humbly shut down your
machine if someone from your group accesses it while mine has people talking
on it?

Is that what you're volunteering? If not, then you effectively 'own' the
pair for the coverage area, or are claiming some sort of primacy on the
frequency.

All the semantics and vested-interest arguments are understood. Those of
us who believe that open machines come first when the crunch comes simply
reject them. We understand that it causes burden and expense to closed
machine users. And we still believe that it's the right thing to do.

Greg

3359. Re: RFD:Radio repair rip-off??

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-03 19:21:05 UTC
From: ed@fore.com
Message-ID: <Cqu5r6.Bx5@fore.com>
Source record: 265730

Hi Ed here, I have worked as a "Tech" for consumer, industrial, video, and computer electronics since I was 16. I have worked for a number of shops and corporations. I think I have seen most of the common rip-offs and the ways that they were done.

>"So I left it off a a local repair shop and told the owner I though it might >well need new finals and alignment."

Is this a "ham radio" repair shop or 'Garys TV,VCR,Microwave,Stereo,& blender shop'?

>He charged me a $45 "bench fee" which would not be refundable but would be >credited toward the repairs...

This is common among shops to have some sort of bench fee to cover the time and equipment that is needed to do a functional test and diagnostic, or at least as much as can be done to a piece of equipment depending on how bad it is. But $45.00 sounds excessive for a ham radio from my experience.

>They send the work out to a technician.

He (tech) probably charges $20 for a bench fee and this other shop doubled it and made an extra 5er for transporting it to the other tech.
It starts sounding shady right there.

>estimate of $225 to $250

The TECH Probably said $100 - $125 and the SHOP doubled it.
$75.00 for parts and $35 for labor = $110 My personal feeling is this is fair for the labor and equipment needed to do this.

>it was apparent that they never actually opened up the set, and that the >quote was based on my impression that it might need new finals and alignment.

An experienced tech could have given an estimate without NECESSARILY opening up the case. I am a new ham, waiting for my call, but this is how I would check a rig... MY OWN PERSONAL OPINION - NOT NECESSARILY THE ONLY OR BEST WAY...

1. power, lights, fan, tube filaments.
2. Antenna, receiver, audio, vfo, band switching.
3. dummy & wattmeter, cw check for rf output / plate tuning meter
4. if rf output low or none, OPEN CASE & check for hi voltage at tube sockets.
5. TEST or attempt to test tube emission.
6. If tubes were expensive $75 is expensive from my point of view, I would also check for rf drive to final tubes with scope.

ITS MY PERSONAL REPUTATION IN MY WORK. ITS MY EMPLOYERS REPUTATION IN THEIR PRICES AND THEIR/MY WORK.

Bottom Line Jim, I think you learned an expensive lesson about that company.

Electronic repair is an easy place to rip people off. Its Proven, I've seen the hidden camera stuff on tv of guys charging $125.00 for rebuilding powersupplys when all it needed was a 2a fuse.

I don't know if you will get your money back, but definately post this companys name and phone number to all the hams you know.

Ed Bathgate
Senior Test Tech
Fore Systems Inc.

The above comments are my own, and not necessarily the opinion of
my present employer.

>

This would indicate that Yaesu is supplying a correctly designed
echo-canceling mike. And, the fact that I talk to like a commercial
radio mike probably explains why I haven't had any complaints about my
audio.

Of course, the problem with this habit is when I'm talking straight
into the radio....my voice tends to be distorted (or so I'm
told....over modulation?), and I have to remember to hold the handheld
away from my mouth....about 6".

Greater than 2 MeV Electron Fluence for 02 JUN is: 8.1E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. The disk remains spotless.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at mostly unsettled to
active levels for the past 24 hours. High latitude stations

reported minor storm levels between 02/0900UT - 1500UT.
Activity is most likely due to a favorably positioned coronal
hole. Energetic electron flux (GT 2 MeV) ranged from normal to
high levels over the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly unsettled to active for the entire
forecast period. High latitude stations should expect periods
of minor to major storm conditions during local nighttime.
Active conditions are expected to persist through the 6th.

Event probabilities 03 jun-05 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 03 jun-05 jun

A. Middle Latitudes
Active 25/25/25
Minor Storm 20/20/20
Major-Severe Storm 15/15/10

B. High Latitudes
Active 25/25/25
Minor Storm 25/25/25
Major-Severe Storm 20/20/20

HF propagation conditions continued below normal over most
regions, particularly on transpolar and transauroral paths.
Similar conditions are expected over the next 3 days, through
05 June inclusive, although gradual stabilization is expected
to take place during this period as well. Night-sectors will
continue to be the most disturbed.

Let's not twist my meaning here...

By "accomodate everyone", I meant that the coordinating body must accomodate equally both trustees of open repeaters and trustees of closed ones. Its job is to minimize interference, not make judgement calls as to who is "more worthy" of a frequency.

>Perhaps. However a significant number of amateurs believe that the 'closed'
>repeater is contrary to the principle that no individual or group 'owns'
>a frequency.

You are correct, no one owns the frequency. The trustee does, however, own the radio equipment (the "station"). There's nothing in part 97 which prevents anyone from putting a repeater on any frequency. Only that they cannot cause interference. It's only courtesy that has kept frequency coordination going for these many years.

>However, in areas where spectrum is becoming critical, we believe that the
>band plan should dictate that OPEN repeaters have priority

I contend that if the repeater is being used, it makes no difference whether it's open or closed. If the frequency isn't being used, perhaps you might have a case for putting another system on the frequency...but an active repeater that happens to be closed has just as much right to be on the air as any open one.

A frequency coordinator cannot be asked to make this judgement call. He will be sued if he does. Most _volunteers_ are unwilling to accept this liability. Are you willing to accept it?

>ractice medicine? How abount an unlicensed automtive "engineer" who could
>kill many people with a single mistake?

That's assuming that having a P.E. means you know what you are doing. Or
that going to college teaches one what the real engineering world is all
about. It takes more than a piece of paper to make an engineer. After all
Apple wasn't founded by degreed or PE'ed folks. Neither was Microsoft...

Does the title of engineer make them one legally? I have been a Field
Engineer, Systems Engineer and Proposals Engineer, but have my college
background in Geology/Meteorology and no PE. (I also had a better
understanding about the real world of engineering and electronics than
a many of my degreed and/or PE'd counterparts.

I'd rather see more emphasis put on licensing managers. After all, the
Challenger was the prime example of management saying "Ship it" when
it wasn't ready you'll ever find. No matter what the engineers or PE's
say, managers have a lot more say in most companies.

Yes, I know thats not ham radio. But this is:

If my antenna(s) get struck by lighning am I liable to my neighbor?
I've had this happen to me with no damage but my neighbors TV got zapped.
(I fixed it, a blown fuse). Any legal eagles have any ideas on this?

>machine if someone from your group accesses it while mine has people talking
>on it?

There's nothing in Part 97 which prevents you from doing just that. The rules
only say that if you cause interference to the coordinated system, you have
primary responsibility to solve the problem. Only courtesy has kept the
coordination system alive until now.

>All the semantics and vested-interest arguments are understood. Those of

>kill many people with a single mistake?

One of the arguments against this suggestion is that a PE license is
no guarantee that an engineer will do safe, quality engineering work
and never make a mistake. All the industrial exemption does is allow
a company to accept responsibility for its products in lieu of an
individual employee (i.e., engineer). Therefore, the employee does not
require a license and the company assumes all responsibility for ensuring
that he/she is properly trained and all liability if he/she designs a
poor or unsafe product which is a danger to the public welfare.

On the other hand, the private engineering practitioner must have
a license because he/she is directly responsible when something goes
awry. But regarding physicians, even licensed physicians sometimes
make mistakes, so what does the license prove? It doesn't prove
competence, it merely proves that the individual had, at the time of
licensing, enough knowledge to be judged competent by a review board.
But "being judged" competent isn't the same as actually "being
competent."

What about the fact that, in many states, a PE license makes
NO REFERENCE to the particular engineering discipline which is the
licensee's field of competence? Does this mean that a PE who's
area of expertise is EE can sign off on a blueprint for a bridge
because he/she is a PE? If that's true, I'd rather put my trust
in a company that someone waving a piece of paper.....

No flames intended here, BTW; in fact, I agree that a PE license
is a good and useful thing. I fear, however, that industry and some
of the professional societies have conspired to create a situation
whereby "going back" to licensing all engineers will be impossible to
achieve. If only one state does it, then industry will just pack up
and move to a state that doesn't do it (and be welcomed with open
arms!). Ergo, it would be necessary to create a national law
(Ugh! Just what we need!) requiring that all engineers be licensed;
otherwise, it will never happen.

The first three pargraphs above are sort of "Devil's Advocate"
statements which probably only scratch the surface of arguments
which would rear up in opposition to your suggestion.....

Directions to the NCARC Superfest.
This years Superfest is located at the Larimer County Fairgrounds in Loveland, Colorado. From I25 from either the north or south take the Colorado 402 west exit. Continue west on Colo.402 past US287. About a half mile west of US287 you will cross a set of railroad tracks. Immediately after crossing the tracks turn north on Roosevelt Ave. Continue north on Roosevelt until it crosses the same railroad tracks again. At this point Roosevelt turns into Railroad Ave. At this point you should see the fairgrounds on the east side of the road. The hamfest will be held in the McMillian Building. Admission is $3. Talk in is on 145.115 with a - offset and 100Hz PL. If you do not have PL encode you can turn off the PL on the repeater by transmitting a 0*. A 1* turns the PL back on again.

3370. Jupiter / Comet collision & radio astronomy

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-03 21:37:00 UTC
From: johnk@ATK.COM
Message-ID: <2DEFA30E@msm.ATK.COM>
Source record: 265823

There has been quite a flurry of activity in the popular press about the forecast upcoming collision of a comet with the planet Jupiter in the July time frame. It is supposed to be quite an event, even though the collisions will occur on the far side of the planet.

Some time ago, I remember an article by Cornell Drentea in Ham Radio magazine about "amateur" radio astronomy and the ability to sense radio emissions (and I believe they were from Jupiter) in the 14-16 MHz range.

Has anyone seen any announcements or know of any attempt to monitor the radio wave emissions of Jupiter during this event? Certainly, most of the worlds optical telescopes will be trained on this, but is there any "grass roots" personal / amateur coordinated effort at monitoring this?

Please reply to the net or directly to: johnk@ATK.COM

Thanks 73

I'm not very comfortable with the concept of "licensing" people to do work.

If somebody is good at programming and I think that person is capable and
responsible, I should be able to get computer programs from that person
regardless of whether a license to practice has been issued.

(Now change computers to people and read that paragraph again:)

If somebody is good at medicine and I think that person is capable and
responsible, I should be able to get medical care from that person
regardless of whether a license to practice has been issued.

However, I'd be very happy if some trustworthy organization had a set of
standards for "certifying" people. If my doctor friend were certified by,
say, the A.M.A. as a capable general practicioner, that would be great.
Imagine the A.M.A.'s "public service" announcements: "Make sure you're
being treated by an A.M.A.-certified physician!" Malpractice insurance
providers could base their rates on levels of certification.

And the S.A.E. could certify people as skilled automotive engineers without
some regulatory body preventing "unlicensed" people from working. A company
might choose not to hire an "uncertified worker", but government regulations
shouldn't have to enter into it.

>
>
Well, then, I'll be anal, too. Why, if we're all anal and
act like we're the sole authority on amateur radio practice,
just think what we can do to standardize thing!
And, if we ever have an emergency and ham radio is needed
to make an autopatch call, I"ll just do it my way.

>
>There's a big difference here. For starters, there is no rule anywhere
>that states that any of the above mentioned practices are illegal.
>Granted, they may be unsavory, but they're legit. For example, you can
>note that a linebacker is ugly, but you can't flag him for it. It's
>just not in the rules. You just shrug your shoulders and go on about
>your business.
>
I never said they were illegal. Conformity helps.
Standardized amateur practices make it easier to understand
the next guy. But, since it's obvious the majority of old timers
think it's okay to do it any old way they damned well feel like it,
I will stop bothering to do things the way I was taught.

Listen to repeaters from different cities. Notice how different
they are when they talk? God knows what I'm gonna hear on repeater
142.xxx. When I say "KB8SGL monitoring", I might very well hear
"KB8SGL, how nice for you. Call CQ on this repeater, please"
Yes, diversity and chaos. How sweet it would be.

>Have a nice day. And remember, it's a Hobby!
>
Yep. It's a hobby.

Regulated by the government.

And since they can't figure things out, I'll stop trying.

I've come into possession of an antique Hallicrafters SX-28 "Super Skyrider" receiver. Not being a ham, I'm looking for advice on what to do with it.

For the uninitiated, the SX-28 is an antique receiver with enough dials on the front to run a nuclear power plant singlehandedly. Its construction is sturdy enough to do a tank proud, and it's in good shape as far as I can tell.

I don't know exactly when it was manufactured, but the manual (which includes full schematics) is dated November 1, 1943. The front cover says "frequency range - .55 to 43. megacycles (!)".

This receiver is obviously obsolete by today's standards, but may provide hours of fascination for the right hobbyist. It's so old, it may even be worth money.

Questions:

1. Is there a market for antique receivers like this?
2. About how much might it be worth?
3. Where might I advertise it if I wanted to sell it (other than this group)?
4. If it's not worth selling, how might I go about finding it a good home?

I never read this newsgroup, so please e-mail responses to me: jng@sli.com
If I get any good advice, I'll post a summary...

Thanks,

Mike Gilbert jng@sli.com

Yes and Yes. But you did accept the non-refundable terms when you left
the set. If I were you I just wouldn't go back there again.
The last time I looked, it was $75 in this area just to take a looksee
for an estimate. In the repair business an "estimate" often involves
indentifying the problem which is really most of the work. Many consumer
customers will complain about a $100 repair bill to replace a 10 cent
capacitor. They don't give a rat's rear that it may have taken hours of
troubleshooting to find the bad part. If the repair technician is good
enough to find bad capacitors in a couple of minutes then they can and
will make more money somewhere well away from consumer electronics.
All repair shops now seem to have some kind of gestation period before
they will even look at something. 2-3 weeks is minimum usually. This
and the high prices should convince hams that it is well worth the
trouble to at least try fixing something themselves. Hams are especially
lucky because most rigs, new and used, come with schematics and even well
written circuit descriptions and repair/alignment procedures. Other
consumer electronics is getting very hard to find documentation for. The
manufacturers will tell you that the information is proprietary and you
either send it to their repair station or junk it.
The moment you bring your rig to a repair shop you cross the line from
experimenter/tinkerer to a full fledged appliance operator. Go ahead
and try to fix it. Its probably not the tubes or alignment if there is
no transmitter output at all. Check the driver stage for output first
and work your way back to the oscillator from there. Oh, and check for
all voltages present of course.

In article <Cqtq3s.Fu1@ss3.magec.com>, pegood@ss3.magec.com (Peter E. Goodmann) writes:
|> -How about protection from lawsuits related to TVI, telephone interference,
|> and other forms of RFI caused by poorly designed consumer products and/or
|> Part 15 devices operating on frequencies assigned to the Amateur service?

I see a couple of problems with the above.

First, consider that the state doesn't have any authority in the areas of
TVI, RFI, or the design quality of consumer goods. The original poster is
running for a STATE legilature. (FCC has authority for all of the above,
and has claimed such will through federal preemption of same.)

The second problem I see with the statement Pete made is the assumption that
these consumer goods are "poorly designed." Such goods are designed to meet
specific standards put in place by FCC, et al. Part of what I use as a
working description of a good design is whether the product does the required
job for the cheapest manufacturing cost. From this point of view, designing
in protective circuitry to eliminate interfernce from an amateur radio station
as an example, isn't required, would make the product cost higher, and therefore,
doesn't meet the metric I mentioned!

This isn't to say that I wouldn't like to see such protective circuitry in
consumer electronics. The reality of being a designer in the consumer world
is that these protections AREN'T required, and consequently aren't there. The
place to go bang on is either Congress, or the FCC who DOES have the authority
to mandate such design practices. You simply aren't going to see them there
until it is mandatory. I guess my main points are that the original poster
isn't in a place to help, and the designers aren't the ones to blame.

Lastly, part 15 devices are allowed to run on Amateur service frequencies
due to FCC policy. Again, this is the place where any corrections are going
to start, though I doubt such will ever occur. ARRL DID comment about
possible interference when the new part 15 rules were adopted. Their comments
fell on deaf ears.

|> On a VERRRRRY loosly related subject, how about eliminating the
|> "industrial exemption" clause in your state's engineering registration law?

|> kill many people with a single mistake?
|>
|> Thanks, and good luck!!

|>
|> 73,
|> Pete Goodmann, P.E., NI9N
|>
|>

Responding to the above is the REAL reason I'm posting! Pete, as soon as a PE license has RELEVANT material, i.e. tests me on items that are relevant to design field I'm in, then I'll consider going and getting a PE. Currently, the PE is an absolutely USELESS piece of paper for me and at the same time has NO bearing on the field I'm in. If I were designing bridges or buildings this wouldn't be true, but the current test structure in CA doesn't come close to being relevant to computer design! For instance, there just isn't that much need to apply fluid flow theory to designing a new PC. I need to know about computer architecture, computer languages, functionality available in current logic families, compatibility between logic families, EMI, RFI considerations, etc. Most of the above ISN'T covered on the PE last time I looked. The fact is that they would ask me things that I forgot soon after I graduated that have no bearing on what I see as a practicing engineer in a commercial setting. Consequently, the test does NOTHING to insure that I am competant to practice in my particular specialty.

So, to answer your question...Would I want an unlicensed automotive "engineer" to design the vehicle I'm riding in... I suspect I already am ;-) So, I guess I wouldn't mind! Certainly, there have been vehicle recalls over the years due to design mistakes, but if memory serves, alot of these were due to management decisions, not engineering decisions, i.e. the design flaw was discovered, but management swept the issue under the rug. Happens all the time. How would a "licensed" engineering staff have made a difference here?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 3/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 3 JUNE AND FORECAST UP TO 6 JUNE

IPS Warning 15 was issued on 26 May and is still current.

1A. SOLAR SUMMARY
Activity: very low.

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/02

1B. SOLAR FORECAST
04 June 05 June 06 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 70/05

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 2 June
Learmonth 19 3334 4343
Fredericksburg 15 21
Planetary 20 19

Observed Kp for 2 June: 4444 3333

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 Jun 20 Unsettled to active.
05 Jun 20 Unsettled to active.
06 Jun 20 Unsettled to active.

2C. MAGNETIC COMMENT
Disturbance expected until 7 June due to a coronal hole. Activity is
not expected to exceed active levels locally for the remainder of the
disturbance period.
3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Jun normal fair-normal fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Jun normal normal fair
05 Jun normal normal fair
06 Jun normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
Global HF propagation conditions are expected to improve slightly for
the remainder of the geomagnetic disturbance currently in progress.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 03 June: 31

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
04 Jun 25 Near predicted monthly values.
05 Jun 25 Near predicted monthly values.
06 Jun 25 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Local propagation conditions remained normal-fair yesterday, with
occasional sporadic E layer. Normal conditions are expected for the
next three days.

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
June 03 to June 12, 1994

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008
SKYCOM Announcement: (403) 756-2386

MONTHLY MEDIAN MAP OF MAXIMUM USABLE FREQUENCIES AVAILABLE FOR ANONYMOUS FTP

A monthly median map of Maximum Usable Frequencies for 3000 km distances is available through anonymous FTP from: ftp.uleth.ca (IP number 142.66.3.29) in the directory "pub/solar/Iono" (note the capital 'I' in Iono). Grab the files "obliq.gif" and "muf3000.gif". These same GIF image files can be downloaded from our computer BBS (403-756-3008) under the same filenames in the "Solar Geophysical Data - 1994" file area. Both of these maps were produced using the powerful SKYCOM HF Ionospheric Signal Analyst software for personal computers.

The map "obliq.gif" is the same as the one contained in "muf3000.gif", except that we forced SKYCOM to produce contours every 3.0 MHz for the "obliq.gif" map to reduce contour congestion, while "muf3000.gif" uses the maximum number of contours allowed for high resolution of ionospheric features. As a result, "obliq.gif" may not resolve as much detail as "muf3000.gif", but the map itself may prove just as valuable.

The map given in "muf3000.gif" was projected using a Mercator projection centered on 40N 105W. It would have been just as easy to use one of a number of different polar projections (stereographic, equidistant, equal-area, etc) or cylindrical projections (Lambert, Plate Carree, etc) centered on any other longitude. You have an inordinate amount of control over the type of map projection you want SKYCOM to use. SKYCOM comes packaged with a geographical database covering over 100,000 geographical points.

"obliq.gif" is a projection of the MUF(3000) values (in MHz) on an oblique azimuthal equidistant chart centered on 40N 105W. The radial "spokes" represent azimuthal bearings from the center of the map projection to great-circle distant points around the world. If a signal was transmitted from 40N 105W, it would follow the azimuthal "spokes" in

straight lines. This is an immensely powerful map projection. The blue circles are geographical latitudes spaced every 10 degrees. The light magenta colored oval is the geographical equator. You can create these powerful map projections for any location around the world and can superimpose any of the constructable maps (MUFs, critical frequecies, maximum F2-layer heights, solar zenith angles, magnetic field characteristics, and much more) on them.

Using "obliq.gif", if you were located at the center of the map projection (40N 105W), you can instantly determine what azimuth is required for a radio signal to travel to a distant location. For example, by examining "obliq.gif", it is easy to see that a transmission intended for eastern Australia would need to be directed toward an azimuth of 250 degrees (or slightly south of due west). Likewise, transmissions toward Europe would need to be directed at azimuths between about 30 and 50 degrees in azimuth (or about northwest).

When combined with the median map of MUFs, you can determine what azimuths may yield the highest or lowest MUFs for 3000 km paths at 18:00 UTC. For example, this map (obliq.gif) shows that most transmissions directed between 70 and 100 degrees in azimuth will be associated with a median MUF of between 16 and 19 MHz at 18:00 UTC for 3000 km paths. Azimuths from about 300 degrees to 60 degrees (going clockwise in direction) may experience the lowest MUFs (between about 13 and 16 MHz) at 18:00 UTC. Conversely, transmissions directed between 110 and 220 degrees in azimuth may see the highest 3000 km MUFs at 18:00 UTC. Analyzing oblique azimuthal equidistant projections in this way can give you very informative 'frequency guidance' AND 'directional guidance.'

Median maps of MUF are maps showing median maximum frequencies for specific distances. In these cases, the distance is 3000 km. These maps define regions where maximum usable frequencies should be observed 50% of the time. For example, (refer to "muf3000.gif") at 18:00 UTC, central Oregon and much of the extreme northwestern U.S. states should see MUFs of about 16 MHz for about 50% of the month. Other influences such as enhancements in geomagnetic activity, sporadic-E, solar flares and other phenomena may serve to increase or decrease the actual observed MUF above or below these values.

These maps were produced using a 12-month mean sunspot number of 53 and quiet geomagnetic conditions (A-Index of 5, a requirement for producing median maps) and were valid for 18:00 UTC on 02 June. They are valid for approximately one month centered on 02 June and should then be updated with new 12-month mean sunspot numbers. SKYCOM permits you to easily construct monthly median maps of MUF or critical F2-layer frequencies, etc, for any time of day and any date - an exceptionally powerful function that exceeds the capability of most propagation software packages.

These maps were produced using the URSI ionospheric model. Similar maps can also be produced using the CCIR ionospheric model. Either of these models can be easily selected in SKYCOM. These maps match those

produced by the International Reference Ionosphere and give you the ability to produce professional-grade maps for frequency guidance during the month.

This is a very small sample of the capabilities of SKYCOM. The maps provided through anonymous FTP are valid through to about 17 June. For more accurate (non-median) MUF maps, SKYCOM can be instructed to handle specific situations (ex. geomagnetic storms) and provide MUF maps for specific hours and distances during specific geophysical events by including other simple parameters as input. All data required by SKYCOM can be computed from or directly copied from data given 18-minutes after each hour on radio stations WWV and near the top of each hour on WWVH at 2.5, 5, 10, 15, and 20 MHz. Immediate results can be obtained with only the date, time (local or Universal), geographical locations of the transmitter/receiver, and the sunspot number. How's that for non-technical simplicity?

For more information regarding the SKYCOM HF Ionospheric Signal Analyst, contact: Oler@Ultrix.Uleth.CA, COler@Solar.Stanford.Edu, call our computer BBS at: 403-756-3008, or write to us at the address given at the header of this report. Pricing information is available by calling the recorded message at: 403-756-2386.

Take a look at your repeater directory. Although I do think that prohibiting closed repeaters is going too far, the current situation really is outrageous.

An anecdote: a couple of weeks ago my wife and I were the hiders for our local (El Cajon) biweekly T-hunt. We planned to use one of our TH-78's as the hidden T, stuck in some bushes, but to fool everyone into thinking we were somewhere else by using the HT as a crossband repeater. Since the 440 band is so quiet, I figured it would be easy to find an unused repeater frequency for input. Imagine my surprise when I found NO unused frequencies on the entire band, this despite the fact that, except for a few very heavily used local machines, the band is usually silent. Fooey!! We did finally find a frequency that appeared to be open and which we used--which turned out to be the frequency of a nearby repeater in Mexico! Hopefully we didn't interfere with them, we used the lowest power we could, and put PL's on everything.

There is a mod in the the June 1981 issue of the Fox-Tango Club
Newsletter that describes how to change the 6JS6 tubes to the GE
8950. This is also a sweep tube and I have no idea if these are
still available anywhere.

Hope this helps.

David M. Barley
dmbarley@midway.uchicago.edu
University of Chicago

I am now a student here in Chicago (originally from California). I recieved my Novice Class when I was 12, about five years ago. Now that I am a little older--ok, so a lot older--I can understand the material for the General and higher classes. I know a lot has changed in terms of the classes, but i am sure that the General Class still exists--right? What I would like are some names of stores that carry HAM stuff, like manuals and equipment and study guides and morse code tapes, etc. I live in Hyde Park and have not seen anything around here. Also, what places around here offer courses and opportunities to take the different tests.

I would appreciate e-mail since it is much easier for me to get! Thanks in advance!

The ARRL repeater directory lists one at 146.880-. You DO have a
reciprocol Mexican license, though, right? Otherwise, you run the
risk of having your radio confiscated by Mexican Customs when you get
off the plane. You of course also need the Mexican license to transmit
there.

ARLB049 FCC clarifies action

FCC clarifies action

In response to a request from the ARRL and inquiries from others, the FCC's Private Radio Bureau has clarified new rules that went into effect on June 1, 1994. The new rules do not remove the restriction against automatic control of digital and RTTY transmitting below 50 MHz.

The new rules, resulting from action in PR Docket 93-85, relax the Amateur Service rules regarding the responsibility for the content of messages on high-speed digital networks. The Commission amended Section 97.109(e), to allow a forwarding station in a message forwarding system to be automatically controlled while transmitting third party communications.

But, the Commission pointed out in a June 2 statement, Section 97.109(d), which was not amended, still limits automatic control of stations transmitting RTTY or digital emissions to frequencies above 50 MHz.

The FCC currently has under consideration two petitions for rule making, RM-8218 and RM-8280, that address this subject. The petitions were submitted by the ARRL and by the American Digital Radio Society.

More information is in June 1994 QST, page 81.

From Tad Cook, KT7H
Seattle, WA June 3, 1994
To all radio amateurs

SB PROP ARL ARLP022
ARLP022 Propagation de KT7H

Solar activity was down again last week. From May 27 through June 1 there were no visible Sunspots, and to make matters worse, there were several days of disturbed and stormy conditions due to a recurring coronal hole. The worst day was May 30 when the Boulder A index was 35.

Conditions will remain unstable until the middle of the month. Solar flux should gradually rise, but only peak around 85 before mid June. Around June 25 or 26 disturbed conditions should return.

Sunspot Numbers from May 26 through June 1 were 11, 0, 0, 0, 0, 0 and 0, with a mean of 1.6. 10.7 cm flux was 71.5, 70.2, 70.2, 69.5, 69.4, 69.1 and 67.6, with mean of 69.6.

The path projection for this week is from San Francisco, California to Cambodia.

80 meters may be open briefly around 1145 to 1245z, and 40 meters from 1130 to 1330. Check 30 meters from 1030 to 1430. 20 meters may be open around 0830 to 0945 and from 1400 to 1700. 17 meters and above do not look promising at this time.

>Right. How are you going to compensate the owners of closed repeaters - and
>remember that, according to the FCC, _ALL_ repeaters are closed - for the loss
>of their investment of time and money in building up their system?

They are not being deprived of their "investment", they are being told that
they must open the machine to all amateurs and not selectively deny access.
Of course the control operator can control and repeater and shut it down at
any time and use a published PL to reduce interference. You can fund your
machine by collecting "club dues", etc, but you can't require it. That's what
I am looking for... That's my definition of "open".

>Any coordinating body that tries to take away folks' coordinations without a
>good cause - and suddenly deciding that closed repeaters are less worthy than
>open ones is not likely to be seen by a court as 'good cause' - is going to
>get its collective butts sued off.

That's why we are working to get the FCC to give priority to "open" systems
because they more closely fit the spirit and intent of the amateur service. If
you are following the law, you are pretty well protected.

I have spoken with three lawers who disagree with you (one who agrees) on the
issue that requiring you to "open up" results in a damage. You do not loose
your investment; worst case is you sell your equipment.

I took the extreme view on this issue because it has worked the
best (on the air) at getting people past the "there are still plenty of open
repeaters, so who cares" cop out. The radio spectrum is a scarce resource,
we can either let it go the highest bidder, or share it. A band full of
closed repeaters isn't very conducive to sharing.

Gary Coffman (gary@ke4zv.UUCP) summed it up most succinct:

"The spectrum is a limited public
resource. Closed repeaters don't serve the amateur community at large
as well as open systems, so as a policy matter, open repeaters should
be the preferred occupants of the spectrum.

I recognize that closed systems are legal, but I don't consider them
desirable. As spectrum management policy, spectrum should be allocated
to serve the needs of the largest number of users. Since open systems
don't place limits on who can use them, they make their chunk of spectrum
more accessible to more amateurs than closed systems do."

Gotta jam,
Roger Bly

Westlink Report Names KD4CKP as 1994 Young Ham of the Year
Louisville Girl Takes Top Honor in Tough Competition

In what one of the evaluator termed "the most difficult choice we have had to make," Allison D. Zettwoch, KD4CKP, was chosen by a select panel of judges over several other well qualified nominees to be named 1994 Westlink Report Young Ham of the Year.

The person selected for this honor must be representative of today's young hams, and Allison Zettwoch well fits that description.

Allison has been responsible for introducing many other young people, especially Boy and Girl Scouts, to the world of amateur radio. She taught a Novice license class to achieve her Girl Scout Silver Award, and regularly assists or substitutes for her father Larry, KR4IF, when he teaches amateur radio classes. KD4CKP has promoted ham radio in Louisville by, among other things, helping to set up demonstrations during local festivals. She serves as the youngest net control operator for the Amateur Radio Transmitting Society's regular Thursday net, and has developed technical skills as well as operating ones.

Allison, active in the Amateur Radio Transmitting Society of Louisville, is comfortable helping less experienced amateurs during Field Day and at scouting's Jamboree on the Air. In fact, Allison has involved a new Explorer post (number 262) in ham radio, including getting the post president licensed and inspired to train others in the post!

Did Allison get dragged, kicking and screaming into the hobby by her father, as many kids reportedly are? No way! In fact, this year's Young Ham of the Year came across an article in a

youth magazine which inspired her to seek a license, and brought both her father and her mother into the fold. What about brother Evan? He's not licensed yet, but then he's only 6.

Allison was nominated as Young Ham when she was just 14 years old, but got the word of her winning on her fifteenth birthday, May 12th.

Has she been resting since her nomination? Not according to John Embry, KR4RL, who nominated her. Embry says that Allison continues to be a motivating force among the young people in ham radio in and around the Louisville area. He told Westlink Report that two of the youngsters that she recruited into the hobby have themselves become true leaders in their own right. One, Shannon Metcalf, KD4RER, now serves on the board of directors of a major Louisville ham club.

Embry also says that Allison continues her activities of recruiting young scouts into the ranks of ham radio. At the recent South Louisville Community Festival she actively discussed ham radio with every person who ventured nearby the station and display -- a exhibit that she personally conceived, designed and helped to staff.

In addition to all of this, Allison still manages to maintain a remarkable 4.0 grade point average! She is taking ground school instruction in anticipation of getting a private pilot's license as soon as she turns 16 years old.

KD4CKP says that she loves scuba diving and will be going to China this coming summer as a part of a special school-sponsored event. And Allison has just assumed the job of Editor of "Watts New," the official newsletter of the A.R.T.S. club.

The Westlink Report Young Ham of the Year Award exists in great part because of the ongoing support of Yaesu U.S.A. Corporation. The company has underwritten this program since its inception. On learning of the selection of Allison Zettwoch as this year's winner, Kevin Karamanos, WD6DIH, Yaesu's National Sales Manager, released a statement of congratulations to KD4CKP on her selection.

Karamanos said that: "Yaesu is once again proud to see so many fine young people becoming deeply involved with Amateur Radio. This is the primary reason that we support this award program. To us, Allison Zettwock, KD4CKP, is an excellent example of today's American youth and we join with all of the nation's radio amateurs -- young and old -- in commending Allison on her fantastic achievements at such a young age."

Thanks to the ongoing generosity of Yaesu U.S.A, and with special thanks to the sponsors of the 1994 Sea-Pac Convention, Allison Zettwoch, KD4CKP, will receive her award the evening of

Saturday, June 4th, at the convention's banquet in Seaside, Oregon. On hand to make the presentation will be Westlink Report Editor/Publisher Burt Hicks, WB6MQV; Yaesu USA representative Harold Christensen, KG7NB; and Newsline Producer Bill Pasternak, WA6ITF. It was Pasternak who created the Westlink Report Young Ham of the Year Award program back in 1986. Yaesu USA has served as corporate underwriter ever since, and will present Allison with "something special" to help her continue her ambitious Amateur Radio related activities.

Previous recipients of the Westlink Report Young Ham of the Year include Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986); David Rosenman, KA9PMK, of Muncie, Indiana (1987); Jonathan Binstock, NK3D, of Potomic, Maryland (1988); Erin Marie McGinnis, KA0WTE, of Topeka, Kansas (1989); Mary F. Alestra, KB2IGG, from Staten Island, New York (1990); Richard S. "Sammy" Garrett, AA0CR, of Florissant, Missouri (1991); Angela Fischer, KB0HXY, of Fenton, Missouri (1992); and Kevin Boudreaux, N5XMH, from Terrytown, Louisiana (1993).

Westlink Report and Yaesu U.S.A. Corporation know that the entire world of Amateur Radio join with them in offering congratulations to Allison D. Zettwoch, KD4CKP for her selection as the 1994 Westlink Report Young Ham of the Year!

I'm opposed in general to most licensing requirements. Even barbers are required to be licensed.. (because once, long ago, they performed "surgery") Beautician need to be licenced... I have no idea why. (but it increases the profits of the beauticians who are licensed by elimitating competition) I agree that some professions seem to need licensing, but be careful... lest computer programmers be licensed, computers be registered (as tools of the trade) because one bug in a computer program can bring down the entire telephone system, or a hundred airplanes at once.

The government is protecting us against too much. I'd like to see that trend reversed.... and (to segue back to ham radio) would like to see ham radio forever exempted from the "radiation" laws being passed in New Jersey or Pennsylvaina... In fact, I'd like to see the laws repealed in general.

John Schmidt (jws@fc.hp.com) wrote:
: Mike,

: > If someone knowingly takes steps to key a repeater, even though
: > they have been told not to, then that is intentional interference.

: Can you support this statement by other than your own opinion, if the
: attempted usage of the repeater is not malicious?
: I would be very interested in any case where the FCC has held that attempting
: to use a repeater is considered "malicious interference". My personal
: contention is that PL today is not an access-restriction mechanism -- almost
: all new rigs include encoders and many open machines require PL to reduce
: interference from other services keying the repeater.

OK lets take this to the next step. Most technically proficient amateurs
today can decode touch-tone signals that are broadcast on the input
frequency. Most of you will now agree that touch-tone is no longer an
access-restriction for controlling or functioning an amateur repeater.
Surely by punching in the correct sequence on a touch-tone pad found on
any radio you are now controlling the repeater. You might even be able to
use the repeater for third party traffic. Where do you draw the line?

If PL is not an access restriction in the historic and common sense then
touch-tone is not sacred.

: > However, we're not speaking simply of actions, we're also speaking of
: > intent. Someone may choose to operate simplex on my repeater input,
: > and use the same PL as I have on my machine because it happens to be
: > the same as one they use elsewhere. Does this become intentional
: > interference?

: A good question, and I would be interested if you have any evidence from
: the FCC's rulings to support your contention that attempting to use the
: repeater is interference. According to the FCC, as you've already stated,
: there really is no such thing as "open" or "closed" repeaters. Anyone can
: shut off their repeater to anyone else. Where we differ is on the issue of
: whether it's malicious interference to try to operate within the rules on a
: "closed" machine that readily responds to all users (or all users with the
: proper PL).

Why do you want to shut off or deny the repeater group their pleasure?
Please remember that the repeater or 40 meter net is on a fixed
frequency. Your station has the ability to change frequency or bands at
the flick of the wrist. The Commission has ruled at length on these
issues in the many cases that have plaged nets and repeaters.

John, your intent is showing...have you forgotten the rule about good amateur operating practice? This is the catch all... ;)

Bob

Don't like it? Tough."

Da, comrade.

> 1. He can open the machine; probably wouldn't change much,
> as the people who 'hang out' on the pair probably will
> continue to dominate it.

You obviously haven't seen a trustee run off of his own repeater by an
invading crowd of users. I have. That's a Good Thing only if you're a
welfare-state communist..."from each according to his ability, to each
according to his needs". Feh.

> 2. He can salvage the support and control systems, and utilize
> them as the core of a new machine with different RF decks
> up on a less crowded band.

The support and control systems pale in cost beside the RF - don't forget
antenna and duplexer as well as RF decks.

> 3. He can sell the machine to the organization who will run it.

For a pittance; after all, they know he'll have no use for it.

>Such is the price of progress.

Da, comrade.

>Yes. That's true. And they moved up because there was a shortage of room
>on 144. Guess what? The problem followed. As it will inevitably follow
>them to 1.2Ghz, after maybe a few good years. Such is the price of
>exclusivity.

They moved up as part of a bargain: "You put your stuff up on 440 and leave us
alone on 2." Now you're proposing to renege on that deal. Why should you be
trusted in the future to do anything but take, take, take, and steal?

>On the other hand, if amateur radio as a whole decides that open machines have
>priority, and pre-emptive priority where necessary, with reasonable opportunity
>to move, then the courts won't support any self-serving fool who decides to
>buck progress.

Are you prepared to defend that idea with your bank account, not to mention your future livelihood? I sure as hell am not, and those are exactly the stakes.

>Yup. And they can trust just the opposite... ...they will continue to have
>to go up-spectrum to get away from the crowds, just as the country is
>becoming farther and farther away from down-town.

They made a deal. You're proposing to abrogate that deal. Don't be surprised when you start a war; that's what happens when countries break deals.

>So if I decide to put an open repeater on the frequency of your closed
>coordinated repeater in the same coverage area you believe that you must share
>the frequency with me, if nobody is on your machine and I, for example, publish
>my PL tones? And that, as control operator, you will humbly shut down your
>machine if someone from your group accesses it while mine has people talking
>on it?

If your open repeater is also coordinated, that's exactly what I mean...as long as you are willing to do the same.

If, OTOH, your repeater is NOT coordinated, then Part 97 is clear: it's primarily YOUR responsibility to see that there is no interference.

>Is that what you're volunteering? If not, then you effectively 'own' the
>pair for the coverage area, or are claiming some sort of primacy on the
>frequency.

As Part 97 provides. It's NOT the frequency, though. IT'S THE STATION, STUPID! (no, I'm not saying you personally are stupid; that's a play on a campaign slogan from 1992.)

The FCC obviously disagrees with you.

>All the semantics and vested-interest arguments are understood. Those of
>us who believe that open machines come first when the crunch comes simply
>reject them. We understand that it causes burden and expense to closed
>machine users. And we still believe that it's the right thing to do.

Got deep pockets? I can tell you exactly what it'll take to get coordinating bodies to adopt your agenda: Pledge your financial support to whatever extent is necessary to keep directors of those bodies, and their families, from suffering from the inevitable lawsuits arising from that action. Anything else is simply irresponsible on the part of those directors; I'm not going to open myself to the kind of liability that would entail.

The 3-Hr Ap Indices for 02 JUN 94 are: 25 21 25 30 15 16 15 16
Greater than 2 MeV Electron Fluence for 03 JUN is: 1.2E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. No significant activity was
observed the past 24 hours. The disk remains spotless.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet to active levels for the past 24 hours. Energetic electron flux (GT 2 MeV) ranged from moderate to high levels over the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be mostly quiet to active for the next three days.

Event probabilities 04 jun-06 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 04 jun-06 jun

A. Middle Latitudes
Active 25/25/25
Minor Storm 20/20/20
Major-Severe Storm 10/10/10

B. High Latitudes
Active 20/25/25
Minor Storm 20/15/15
Major-Severe Storm 20/15/15

HF propagation conditions continued below-normal over the high and polar latitude regions, but improved over the last 24 hours. Middle latitude paths have been near-normal. Additional night-sector substorm activity could continue to sporadically degrade high and polar latitude paths. General fading levels are above-normal over most regions, but signal qualities are not significantly degraded except at times for transauroral circuits. Conditions should continue to gradually improve over the next 3 days, through 06 June inclusive.

Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info

/\

POTENTIAL SATELLITE ANOMALY WARNING

ISSUED: 04:00 UT, 03 JUNE

/\

ATTENTION:

Energetic electrons at greater than 2 MeV have climbed back to high
fluence levels. Over the last month, electrons at these energy levels have
spent more time at high levels than in previous months. During the period
from about 15 May to the end of May, electrons had fallen back to near-normal
levels, but continued to peak at moderate to high flux levels. We presently
appear to be experiencing another recurrent enhancement in activity that has
persisted for each solar rotation since early this year. High to very high
fluences are expected over the next week or two and may be followed by
periods of moderate to high fluence levels thereafter.

** End of Warning **

Why touch 440? Why not simply move upspectrum to another one of the
amateur bands?

Amateurs are constantly giving lip service to "protecting their
spectrum", yet it appears all they ever want to do is find a yak-box
on a VHF frequency, or now, a 440mhz frequency.

3406. Re: Loop Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-04 13:43:52 UTC
From: szb50@ccc.amdahl.com
Message-ID: <1994Jun4.134352.27280@ccc.amdahl.com>
Source record: 265672

I worked all over Europe on 40m from here in G-land with a 4foot
diameter loop indoors. I could turn it to null out the local QRN from
power lines, running only 7 watts, due to the poor capacitor I was using.
I have one for 80m now, compared it with a not too higher straight
G5RV, sometimes one was better than the other.
One G-station reported that when his beam was destroyed by high
winds, he made a loop, stuck it on top of his tower and had no difficulty
in maintaining his daily sked with VK using 60 watts.
Would suggest building one (a lash-up would do), give it a try, you'll
be tickled pink at the performance.

: TO DO AS I DAMM WELL PLEASE WITH IT. If you want to join my "club"
: pay dues, and help maintain it, I might allow you to be "a good old
: boy". Parasites (dead beats) are not welcome!

Listen, Bub, you might try reading the thread before making comments like your last article. First of all, you attribute some of Roger Bly's comments to me, which I don't appreciate one little bit. Let's get it together.

It's obvious that you have either not read, or were unable to comprehend the issues in this thread. Everyone here knows that repeaters are not public property. It has been mentioned by myself and others on this thread that we agree with the concept of a repeater owner expecting some kind of support in return for providing the repeater.

Next time how about reading and thinking before writing, hey?

Well, remember that the FCC most likely has one person doing applications;
there are 480-man-minutes per day, which means they're spending 1 minute, 36
seconds on each application if they're heads-down for the full day with no
breaks. I'd say they're doing pretty well...but I also understand that's cold
comfort for folks waiting on license processing.

The FCC recognizes all repeaters are "closed". If you attempt to allot
frequency coordinations on the basis of the trustee's willingness to
allow operators to utilize the machine at that frequency, you had best
be ready to defend your position financially.

> Because like 40,000 other hams in Southern California, I've got a dual
> band 440/2m radio.

Because like thousands of other hams throughout the US, I've got a
general coverage receiver/transmitter. Guess that means I should be
able to transmit everywhere.

> If you don't consider the relative non-utilization of an entire choice
> band, 440, prima facie evidence of bad management and coordination, well,
> OK. I and others do.

I don't arbitrarilly assign "utilization" as the criteria by which
repeaters should be coordinated. There are numerous repeaters in this
area which receive less utilization than my closed machine. Using your
criteria, we should decoordinate those "open" repeaters.

Since high utilization of an open repeater generally implies excellent
coverage, it also implies high site, high power, and expensive equipment.

Sounds like you want a free ride at everyelses expense.

: The easiest way to deal with paper coordinations is to document no activity
: on a particular frequency for a month, and when you hear nothing, quietly
: place an open system on that frequency.

> Not a bad idea, actually.

Its how "renegade" repeaters get 'coordinated' around here. Its
difficult to argue with facts. And, the fact is if you can document
no activity on a frequency for a prolonged period of time, and you
set a machine up on that frequency, the odds dramatically shift in your
favor that if the coordinating body does complain, you have the
evidence to support your position that you were there first.

Its worked for several systems in this area.

You are discriminating. The term bias applies. Regardless of whether or
not you like OPEN repeaters, the FCC has said that closed repeaters are
perfectly legal.

> That's a hoot! 3000+ hams! We have more than that within a radius of

Really? What if the repeater owner wishes to restrict access so that
those who choose to support the repeater have a place to go when they
can't find an open spot elsewhere? What if the owner's concept of
support means you help pay part of the bills associated with upkeep of
the repeater, otherwise you can't use the repeater?

The impression I've gotten is that you reject both of these concepts.
That, to me, indicates you want a free ride at other people's expense.

Comments like that are not helpful or contributory. They simply have a tendency to piss people off. I seem to recall you lecturing somone on this thread about how this or that behavior would cause the person to not make many friends. Accusing others of "want(ing) a free ride....."etc. is just a way to disregard the real thrust of what is being discussed here and instead lower the quality of the discourse to a level you are for some reason more comfortable with.

If you feel that a repeater owner has the right to operate a coordinated machine any way he wants, and so forth, that's your privilege. I may disagree with you, and that too is my privilege. Discussing it in a gentlemanly way is both our privileges. But let's try to keep the discussion at a higher level than name calling.

> If PL is not an access restriction in the historic and common sense then
> touch-tone is not sacred.

Agree, tones on the imput frequency are not a very secure mechanism. I have
no clue what the FCC would say -- except that a tone sequence to enable a 2m
repeater would have to be on other than the input frequency anyway.
Just my opinion, but I view PL as more of a necessity to clean operation than
an access mechanism. My personal idea of an effective access restriction would
be to require a tone sequence on a control frequency to open the repeat
function, or a digital-burst squelch type of mechanism on the input frequency.

> Why do you want to shut off or deny the repeater group their pleasure?
> Please remember that the repeater or 40 meter net is on a fixed
> frequency. Your station has the ability to change frequency or bands at
> the flick of the wrist. The Commission has ruled at length on these
> issues in the many cases that have plaged nets and repeaters.

Huh? All I said was that if a particular trustee doesn't want a particular
ham operating on a machine, then the trustee needs to either shut it off or
use an effective access mechanism. A good access mechanism can be secure
and not deny access to any members of the "closed" group. If it makes it
slightly more difficult, then that's the price of exclusivity, IMO.
I certainly am not advocating sitting on the frequency to attempt a denial
of access type of attack on the "authorized" users. That would definitely
be considered malicious, and I would never advocate deliberate interference.
I just don't see how mere ordinary use of a repeater, while operating within
the rules, would fall into that category.

> John, your intent is showing...have you forgotten the rule about good
> amateur operating practice? This is the catch all... ;)

> Bob

Intent? No. Philosophy, probably yes. I personally would not continue to
operate on a machine if someone told me I wasn't welcome, unless an
emergency existed, regardless of legalities. (BTW - that hasn't happened
in 15 years of operating. But I haven't been to Rhode Island yet. :-))
I don't personally consider it a good practice and I've got better things
to do than to hang out where I'm not wanted. I do believe that while there
are a few exceptions, repeater operators that maintain "closed" systems do not
serve either the amateur community or the public as a whole as effectively as
open systems. Outside of a few experimenters with exotic setups, I don't
think there's any point to putting up a repeater if your intent is not
to do good for the community. If large chunks of 440 in California actually
sit idle while "occupied" by repeaters closed to all but a few, I think it's
an inappropriate use of valuable spectrum. At the very least, other open

machines could be coordinated co-channel with these systems, using different PL's and mutual lock-out to eliminate interference. Coordination does not guarantee exclusivity in the business bands -- why should it in the amateur frequencies?

Repeater owners that whine about having users support the cost of their systems as an excuse for operating a closed machine are usually just looking for an excuse to play channel cop. I'm well aware of the costs of building and maintaining repeater sites, having been involved with several groups and getting up close and personal with the hardware many times. I've yet to see a good open system that didn't pay its own way.

The largest and most successful systems in this state, including a state-wide linked network, are run by groups that welcome all users, and they have continued to add and upgrade equipment and services based on voluntary donations and memberships. These groups provide all forms of emergency and special event support, as well as regular access at all other times. The only constraint is that you're expected to join a group if want access to autopatches. Regular users are also encouraged to join -- usually by receiving an invitation on the air or in the mail -- and many do. New hams usually rapidly pick up on the idea that you should join the group(s) whose repeaters you use the most -- without coercion. Occasional users and travelers are always welcome. These open groups, in my opinion, are operating in the intended spirit of amateur radio -- unlike those that seem to operate on the concept that a user is not welcome unless invited to use their private repeater, which usually serves no one but their (often few) members.

Probably my last word on the subject....

73,

John, NK0R

The first 2 questions are ... WHAT RANGE, and WHAT DATA RATE do you have in mind ! Lots of VHF stuff around (often advertised in PC Mag & Byte, but usually just 9600 bps) with say a few miles range. At the local area wireless network (LAWN) speeds you fancy (1Mb) range is only 50- 100 metres & easily obstructed by even an office doorway ! (LAWNs usually use spread spectrum in the 1-3 GHz range). If it's just a project you're afdter why not try something in the Infra Red (IR) ?!! Range will be only 20m or so (but you can bounce signals off the ceiling!), but data rates quite high & with error correcting software things can go O.K.. Hewlitt Packard are at the forefront here. If you're a Ham why not consider Packet Radio (but only Modem type speeds) THIS IS A VERY RAPIDLY EMERGING FIELD .,... READ RECENT PC MAGS FOR PROGRESS .... users hate cables of course ! Regards from ZL land

: Agreed, the closed repeater owners would have the same rights as the rest
: of us. They simply wouldn't have rights over and above the rest of us,
: namely, coordination for a repeater pair on a closed or private basis.

Roger, what you are suggesting is to take the rights away from the already existing closed repeaters, not to fairly make the rights equal. This is exactly analagus to some of the so called "equal rights" legislation that came out in the 60's and 70's. The bottom line is both types of systems are equal . . . in the eyes of the FCC . . . and that's as it should be.

: Once 440 reached the level of openess found on the model band, 2 meters,
: perhaps this could be relaxed.

In some parts of the country, read that "level of anarchy" found on the model band, 2 meters.

: The current 440 coordination group has abused its authority recklessly.
: This can be seen quite clearly by the disuse into which Southern Cal's
: 440 band has degenerated.

I live in Texas, but I'm a welcome visitor to a number of those 440 "closed" repeaters when I visit southern California. On my 440/1.2 Gig dual band talkie (notice no 2 meters), I hear lots of 440 (and 1.2 Gig) activity. There may perhaps be paper repeaters, and that's not good.

: True, but the ones in Southern Cal are happy with the paper radios. If
: not, then why are they coordinated?

If SCRUBA is ignoring this, then they are at fault . . . but my guess is they are not ignoring it at all. Until you have been a frequency coordinator, don't be so quick to gripe. You don't understand their problems.

: : are inexpensive today? If 440mhz doesn't present the level of "openness"
: : you like, then why not move up to 1.2ghz?

: Because like 40,000 other hams in Southern California, I've got a dual
: band 440/2m radio.

Why is it that 39,994 southern california hams are able to use closed repeaters in the area, and just a hand full seem to have problems? Some of the greatest abuses take place on the open repeaters. Whole groups will shun newcomers or ignore them. Many open 2meter repeaters are by far more closed in general attitude than many closed 440 repeaters. How about all the open 2meter repeater groups with closed 440 repeaters for the exclusive use of their supporting club members?

You might want to dump your 440 dual band radio while you can still get ten bucks for it. Get a real radio maybe a tri-bander with 2meters, 6meters and 1280Mhz. Your group of hams could have an open 1280 repeater operating from any high level site in southern california this summer if you really wanted to show the rest us us how well it works. I know it works better than 440 any day, no radar or pager intermod. It works better than 2meters, not an other open beep-boop box 40 miles up the road.

If you want a good technical challenge, show us your open 6meter repeater, there are frequencies available, and lots of cheep junk equipment to use.

: : > The current 440 coordination group has abused its authority recklessly.
: : > This can be seen quite clearly by the disuse into which Southern Cal's
: : > 440 band has degenerated.

: : The only evidence I have seen related to band mismanagement posted here
: : by those who seek to eliminate closed repeaters from 440mhz are "paper"
: : repeaters being maintained by the coordinating body. And, while I agree
: : that this is improper, there are ways to deal with it above and beyond
: : eliminating closed systems on 440mhz.

In an other thread a fellow in San Diego posted " there were repeaters on all the 440 frequencies." This goes to show that a paper repeater does not last in a crowded market place.

: If you don't consider the relative non-utilization of an entire choice
: band, 440, prima facie evidence of bad management and coordination, well,
: OK. I and others do.

This is not a coordination management issue. What you are hearing is vary
poor management by the coordinated repeaters and remote base stations.
Management style can not be regulated by a coordinator. I would agree
there are many repeaters on all bands that are just empty warehouses.

I would suggest that there are not enough amateurs in southern california
interested in talking on 440 to make the band sound like the popular
watering holes found on some 2meter frequencies. Here in the san francisco
bay area most of the activity heard on a dual-band radio is from the
closed 440 repeaters. This was really brought to my attention by many
tourists visiting our area. They could not get over the shear numbers of
groups using the 440 band, nothing like it at home.

: : > True, but the ones in Southern Cal are happy with the paper radios. If
: : > not, then why are they coordinated?

: : The easiest way to deal with paper coordinations is to document no activity
: : on a particular frequency for a month, and when you hear nothing, quietly
: : place an open system on that frequency.

Most coordinating bodies have a take away procedure. Follow the local
procedure. Who wins when the paper repeater comes back to life when your
"quiet repeater" shows up on their coordinated frequency? They do! unless
you have followed the procedure and the coordinating body has taken away
the previous coordination. Remember you still have to get agreements from
the other repeaters on your frequency.

Following the policy and procedures of your local coordinating body is
: Not a bad idea, actually.

And neither of these methods are realistic for normal, end-user access
to the machine. Perhaps for control functions, but certainly not for
everyday access. Some reasons why:

1. The equipment to perform this function is not widely available to a
majority of users within the existing radios sold by equipment
manufacturers (although some are starting to include DTMF squelch as
"standard" options).

2. Requiring a third frequency for control purposes reduces the amount of
available bandwidth for others to use. Now a repeater will take three
frequencies instead of two.

3. The complexity of activating the machine may be more complicated than
some people can understand properly.

> All I said was that if a particular trustee doesn't want a particular
> ham operating on a machine, then the trustee needs to either shut it off or
> use an effective access mechanism.

There is no such thing as an "effective access mechanism". PL, DTMF
squelch - they all can be broken in a matter of seconds if you have the
right equipment. Activation via a third control frequency is not
practical - its simply not possible without additional equipment or
modification to existing equipment.

About the only way to truely restrict access would be to use a RF
key-down signature fingerprint and compare it against a database of
valid users. Even this is not practical - the amount of time required to
take a snapshot at keydown, look up in the database, find a match, and
open the squelch would clip the first second off each person's
transmission. Not to mention we generally don't authorize radios, we
authorize people, to use closed machines.

> I do believe that while there

Subjective value judgement.

> The only constraint is that you're expected to join a group if want
> access to autopatches.

Well, we ought to de-coordinate them in favor of machines with completely FREE autopatch access, damnit! Why should the cost of running an autopatch be any different than the cost of electricity, site rental, or maintenance? Open up those frequencies to someone who is willing to give free autopatch. That's certainly serving the amateur community or the public as a whole more effectively than a machine with a members-only autopatch does.

Thanks to a recent reply regarding my TH-28A VHF hand held(& its freqs)
I have mangaged to unearth several undocumented features of these
Kenwood HF/UHF sets ! Why the manuals don't mention them beats me !!!!!

TH-28A Can be easily convinced to cover AM aircraft band (118-136MHz)
------
1. Turn on & make sure you're in VFO mode on VHF
2. Touch F button for 1 sec or so until it flashes
3. Then touch LOW button. LCD shows 118-136 range (receive only)!!

* All usual Mem/ Scanning functions available.
* Repeat steps 2 & 3 to return to normal VHF 136-173 MHz .

TH-78A Can be persuaded to receive cell phones AND < PLAY POKER > !

CELL 1. Turn on & ensure in VFO mode & on UHF
PHs 2. Touch F button for 1 second until it flashes on LCD
--- 3. Touch BAND button. Display & coverage is then 800-1000Mhz UHF,
& 300 up on VHF. All mem/scanning features available.
4. Repeat procedure to return to normal

POKER !!
-----
1. With set off touch PTT + M + PWR UP keys simultaneously.
(Similar to "3 fingered salute" CTRL+ALT+DEL with PCs)
2. Display changes to show the card game POKER !!
* Simply PWR OFF to return to normal radio use.
* Actual keys to play the game I have listed here O.K., but will
only make available if wanted ... request if you can't work out

Any other "mods" out there ? 73s de ZL2AJZ & ZL2USP in New Zealand

> for some reason more comfortable with.

Sorry Roger, that's the way I see it. Legal and moral issues aside, the advocates of no-closed/all-open repeater coordination feel they shouldn't shouldn't have to pay to access spectrum that "belongs" to everyone.

And, while I may agree that its a good policy to promote as many open systems as possible, I also recognize that systems are expensive to set up and maintain - especially good systems with many links, remotes, and excellent coverage. Hence, if those trustees wish to restrict access to the machine to "members only", that's their right.

Its not a question of frequency ownership. Everyone knows that nobody "owns" a frequency. Certainly someone can choose to operate on a repeater input or output, and can probably do so ad infinitum, as long as they're not interfering with its operation.

Amateurs are very greedy when it comes to their spectrum. And, with the welfare-state mentality permeating american society, its only a matter of time before we see that mentality invade amateur radio - and rightfully so, since the attitude of hams involved in ham radio simply mirror those of society as a whole.

I believe that the attitude expressed by some here - dual-band radios are cheap and we want access to that spectrum now, so decoordinate all of the "closed" machines so we can coordinate new yak-boxes which will give us free access to the airwaves - is but one symptom of that problem invading the hobby.

If you disagree, then fine, that's your right.

My statements posted to USENET are never inappropriate.

I've had this same argument with dozens of other people over several
years in this same newsgroup, so let's do them all a favor and move it
to e-mail if you think my term "no-clue" is 'inappropriate' and save
them the drudgery of rereading all the same arguments which they
themselves posted years ago.

Some people really have no clue.

Perhaps they are. However, what percentage of dual-band radios are sold
to new hams purchasing their first radio?

From my very biased self-serving observations, I've always found
that new hams tend to purchase a single-band 2 meter radio, because
it is really cheap. Then, after they get on and hear the offending
assault hit their ears, they immediately call back HRO and get a
price on UHF gear!

Dual-band radios may be the biggest seller because they're so
inexpensive today. Thus, everyone is buying one, regardless of their
status as a new ham or old.

: Yes, that's exactly what I'm saying. The spectrum is a limited public
: resource. Closed repeaters don't serve the amateur community at large
: as well as open systems, so as a policy matter, open repeaters should
: be the preferred occupants of the spectrum.

I'd say it's pretty presumptous on your part to say closed repeaters
don't serve the amateur community . . . as well as open systems. This
may be your opinion but it's not necessarily fact.

: to serve the needs of the largest number of users. Since open systems
: don't place limits on who can use them, they make their chunk of spectrum
: more accessible to more amateurs than closed systems do.

Actually, a trustee can't really do this any more. Defacto, all trustees
MUST place a limit on who uses their repeater per the FCC. The trustee
may choose to ignore this requirement or just give blanket approval to all,
but it is now their responsibility to know and approve the users of the
repeater in some sort of timely fashion. If they don't, and illegal
operation occurs on the repeater, the trustee is then responsible. You
have to keep up with the new rules and interpretations.

Jay is right, this really should be going on in "policy".

VK2SG RTTY DX Notes, 30 June
VK2SG RTTY DX Notes for week ending 3 June 1994 (BID RTDX0603)

One wonders where the art of communication has gone? Over the past
week I read an interesting bulletin edited by Helmut, DL2BR on Pactor
Link-Errors. When using the mode one may see several operational
errors. Most of those are caused by a lack of knowledge of the
protocol. Some errors arise by misunderstanding the possibilities of
Pactor. But a few operators ignore existing connects too. Fortunatly
the last mentioned are really a small minority.

Our thanks this week go to ZS5S, W2JGR, WB2CJL, OPDX, IK6CGO, I5ICY
and IK5PWJ PacketCluster and the NJ0M node of the Twin Cities.

Notes Of Interest:

SAINT PIERRE & MIQUELON, FP. FP/KA1NCN will be active on CW, SSB and RTTY from 160-10 meters from July 19-25. He will participate in the IOTA-contest. QSL via AA1AS.

LIBYA, 5A. There are rumors for a planned operation in Libya by a Japanese group led by Ajiro, JA2JPA. No official date is known. The operation has a United Nations agency sponsorship.

BHUTAN, A5. There are still hopes for a possible operation by Jim Smith, VK9NS from this place. Actually he is waiting for new permission from the Bhutanese authorities.

SVALBARD, JW. Tom, LA4LN and and Magne, LB3RC will be active as JW4LN and LB3RC/JW from August 1-20. They will use all bands from 160-10 mtrs including WARC on CW, SSB and digital modes. QSL direct only to the respective home calls.

Send your Bandpass and Notes for next week's bulletin to Bob,
WB2CJL @ W5KSI.#NOLA.LA.USA.NA or to WB2CJL @ I5FLN.ITA.EU.

Greg Bullough (greg@netcom.com) wrote:

: Perhaps. However a significant number of amateurs believe that the 'closed'
: repeater is contrary to the principle that no individual or group 'owns'
: a frequency.

Are you suggesting that an "open" repater does own it's frequency? You
are not talking about closed verses open with this statement. You are
referring to coordinated verses non-coordinated. A coordinated repeater
doesn't "own" a frequency regardless if open OR closed. It, like any
other amateur radio operation, has a right to exist without interferrence,
hence the protection from a non-coordinated system.

: However, in areas where spectrum is becoming critical, we believe that the
: band plan should dictate that OPEN repeaters have priority, sometimes to the
: extent that even existing closed sites are offered the option of either
: opening up or giving up the allocation. And we also believe that the
: 'band plan,' as developed by local and national organized Amateur Radio
: groups has sufficient authority to dictate fair spectrum usage.

Who is going to be in charge of this kingly operation that decides who is
really good and who is really bad? Does a closed autopatch give you one
black mark? How about used of the remote base . . . does a little
control here increase the "black" a little more? You are really talking
about a grey area that will be very tough to define. Again, all systems
must have some "closed" operations associated with it (like basic
control, for instance).

I'm not really straining as much as you think here . . . you have now
entered the twilight zone ham radio politics.

Roger Buffington (rogjd@netcom.com) wrote:

: Comments like "Who died and made you God?" are not helpful.

But that's exactly the point. The people who want to jam it down the
throat of closed repeaters are primarily using the arguement that "we know
whats best, don't bother me with the facts."

If the majority of the people in my neighborhood want me to take down my
tower, that's too bad because there are no covenants that restrict towers
in my neighborhood. They may think it's for the common good that my
tower comes down but it doesn't work that way.

Is this really the way you want amateur radio to work?

>from the "offical" method often results in a lecture from an
>Annally Retentive Regulation Loving Kilocycle Cop.
>IE: 3-10 minute time limit, Use the system to contact already known persons,
>that is, no turning on the system to make a new friend in a distant town.

The 3 minute commute and ten minute other time limits were imposed on the system because some individuals were not able to opperate without such guidelines. The system worked well for at least 5 years before this restriction had to be placed on the machines.

The system *can* and is used to meet people in distant towns, it must be done with great prudence. Consider what it would be like to liven a major city, whose two meter repeaters are already busy, then link these across an entire state with a contiuous coverage of roughly half the state of Washington. It is just a matter of exercising good judgement.

>Also, most network nodes are kept in the "off" mode. A code control cheat
>sheet is neccessary to enable the network for a QSO, and then disable the
>network afterward.

The Intertie is much like internet in that each individual machine is autonomous. It decides whether it wishes to participate in a net, or be on at all. The ablility to turn the machines on and off at will (by the users) makes the Intertie flexible.

>It has value, but it could have so much more.

As a former control operator (I am now college and don't have the time to invest) I think that you need to look at the reason for many of these rules that you consider thorns. Perhaps you should become more involved in runs up the hill in the middle of the winter, or better yet in elmering the new, and the old who can't seem to get it together, so that thorns don't grow.

Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 4/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 4 JUNE AND FORECAST UP TO 7 JUNE

IPS Warning 15 was issued on 26 May and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 068/002

1B. SOLAR FORECAST
05 June 06 June 07 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 070/005

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 3 June
Learmonth 22 4344 3434
Fredericksburg 20 20
Planetary 20 19

Observed Kp for 3 June: 4433 3334

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
05 Jun 20 Unsettled to active.
06 Jun 20 Unsettled to active.
07 Jun 20 Unsettled to active.

2C. MAGNETIC COMMENT
Disturbance expected until 7 June due to a coronal hole. Activity is
not expected to exceed active levels locally for the remainder of the
disturbance period.
3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Jun normal normal-fair fair-poor
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Jun normal normal-fair fair-poor
06 Jun normal normal-fair fair-poor
07 Jun normal normal-fair fair-poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 04 June: 34

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
05 Jun 30 Near predicted monthly values.
06 Jun 30 Near predicted monthly values.
07 Jun 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Local propagation conditions appeared fair yesterday, with occasional
sporadic E layer and night-time Spread F. Normal conditions are
expected for the next three days.

The original post that resulted in all this discussion admitted their use
of the repeater WAS MALICIOUS. They were trying to interfere. All your
comments are moot!

: If you insist on operating a system closed to all but a select few, it's up
: to you to secure it appropriately. If you took reasonable measures to secure

Totally disagree. A carrier operated repeater may properly be a closed
repeater. Obviously, someone who didn't know couldn't be held responsible
for any "interferrence" but if asked to leave, common courtesy dictates
they should. And if it is generally known that a repeater is closed,
shame on you if you just "accidentally" happen to talk on the input.

: They moved up as part of a bargain: "You put your stuff up on 440 and leave
: us alone on 2." Now you're proposing to renege on that deal. Why should you
: be trusted in the future to do anything but take, take, take, and steal?

Hi Jay, welcome to democratic socialism. It's not who occupies something
that matters... what matters is who controls it. In a democratic socialist
state, you are forced to obey the federal government's latest idea of
what is the greatest good for the greatest number. They can change the
rules for anything at any time for any reason.

The great majority of hams believe that the federal government should and
does own all radio frequencies. If one accepts that idea, then if the FCC
says "all amateur repeaters shall be open", the Great OZ has spoken.

Message-ID: <770772688.AA03667@mcws.fidonet.org>
Source record: 265694

Randy, a schematic diagram won't do you any good. That unit has many modules all interconnected, and it's far from being a simple unit to service. I used to own one, and finally sold it.

I do have a copy of the service manual that I'd be willing to part with, but I'd be more interested in buying the radio from you so I could play with it and possibly get it working.

I used to have a repair shop and did Midland warranty work, so I may be able to get it working. You can reach me at 818-894-2887 (I am more or less local to you).

X-FTN-To: All

------NOTICE----------

To one and all! Finally we are back online! It only took me and my new
Co-Sysop Bob Ward three weeks to figure out that one simple little glitch
was
holding us up, but we even added a new Internet UUCP interface to the BBS
in the process.

The Disney Software BBS is now back on FIDOnet full time, as well as the
Internet!

Internet users can write to us directly here at Disney Software via our
state of the art 8 line BBS at the Intenret ID - sysop@disneysoft.com.

Messages will come straight into our BBS and be answered directly by our
staff!
We are also participating in the rec.arts.disney newsgroup too! It is
available on the BBS as well!

Fidonet users can still reach us at node ID 1:102/841.0 as always, and we
will
have a new Nodelist entry shortly which will allow systems to do File
Requests
from us again! We have plenty of files to choose from!

Our Front Door system is online 24 hours a day and has a line dedicated to it,
so pesky busy signals should be minmized!

Members of the Disney conference on FIDO will be happy to know that I will finally be resuming my duties as Moderator of the echo. The three week delay
in doing so was caused by the BBS pooping out on us again, but now it is going strong and we can get back to work!

Until Chris Harrower returns to Moderator duties I will be handling it. I will be posting new rules in a few days after they get typed up. I have been
watching what's been going on and Steven Soria has been handling it nicely in my absence.

I would also like to state that the echo will be back to it's normal status within two weeks. I am in contact with Chris Harrower and we are straightening
out that little problem.

Well, enough of that! Back to reading!

Dave Arnspiger (Disney SYSOP) drago@disneysoft.com

Hi y'all! Here is my newest product; once again it is Star Trek
Deep Space Nine related, so those of you who are not fans have been
warned... 8-)

And now;
The Next DS9 Music Video!

In an alternate reality, Verak kept Dax, and Jadzia died. But who's
to say Dax LIKES its new host?

(focus on: Verak Dax, nearly swallowed up by the darkness. He stands
just outside Quark's, which is closed. The environmental controls
on the Promenade have failed again, spectacularly so, causing it to
rain inside the station. It's raining hard. Verak Dax holds an empty
bottle loosely in one hand. As he sings, conflicting emotions cross
his face; Dax is taking direct control, overriding the host...)

"Jadzia"
(to "Donna" by Ritchie Valens)

Jad...zia,
Jad...zia,
Jad...zia,
Jad...zia.

I had a Trill, Jadzia was her name,
Since Verak stole me I've never been the same,
'Cause I loved that Trill,
Jadzia oh where can you be?
And why aren't you me?

Verak Dax spends all his latinum on drink,
But when he's unconscious I'm still left to think,
That I loved my Trill,
Jadzia oh where can you be?
And why aren't you me?

Jad... zia, when Verak's gone,
I don't think I'll be Joining anew,
(oo oo)
`Cause of all, all-of-my-hosts, I loved, only you!

I had a Trill, Jadzia was her name,
Since Verak stole me I've never been the same,
'Cause I loved that Trill,

Jadzia oh where can you be?
And why aren't you me?

Jad...zia,
Jad...zia,
Jad...zia,
Jad...zia...

(fade down and out)

--Performance by the Volehunters; lyrics by Tammy Potash.

(note: "Jadzia" must be stretched out to match the length of "Oh, Donna.")

As always, I welcome comments...

Over and out...

... It's time for TRILL! The game show where YOU'RE the host!

Is this true? No open system places limits upon its users?
I thought the court case in SoCal was about the owners of an open repeater
trying to prevent two people from using it.

We can say that when an owner shuts down an open machine due to say, jamming, he
is placing a limit on who he wants and doesn't want to us it.

We can even say that a PL'd open repeater is placing a limit on its
users.

I wonder what you folks would do if there were suddenly no repeaters? You are
so hopelesssly dependent upon someone else's radio (i.e., repeater) that you
would probably see your own radio as worthless (as someone has already
stated because he can't work any of the 440 closed repeaters).

How sad.

One of the first things I did when I got my first 2M radio (in 1976 - it
was a Clegg FM-27 - the very first synthesized 2M rig) was play on
146.76 - it was a simplex frequency back then. Simplex in the Valley
was very entertaining.

>By "accomodate everyone", I meant that the coordinating body must accomodate
>equally both trustees of open repeaters and trustees of closed ones. Its job
>is to minimize interference, not make judgement calls as to who is "more
>worthy" of a frequency.

This is where the classic frequency coordinator hat and the spectrum management hat get tangled. Many coordinating bodies try to wear both hats and there is a basic conflict. As coordinators, their constituency is repeater station operators and potential repeater station operators, but as spectrum managers, their constituency is the entire amateur community.

Many people feel that the only correct policy as coordinator is "first come, first serve", so whoever first files a non-conflicting application to operate a repeater gets the coordination in perpetuity. However, as spectrum managers, the body has to take into account the interests of all of the amateur community, users as well as operators of the designated repeater spectrum, in order to maximize the utility of the limited public resource to *all* amateurs. This is a dynamic role in a growing service. It's in this latter role of establishing public policy that most coordinating bodies fail to carry out their responsibilities.

Since coordination bodies are generally elected by their members, almost exclusively repeater owners, they tend to protect the status quo. That's only natural. However, when they also attempt to wear a spectrum manager hat and set public policy, they aren't representative of the amateur community at large. This is a fatal flaw and a basic conflict of interest.

The current issue of "closed" versus "open" is not a coordination issue. It's a spectrum management policy issue. Currently constituted coordination bodies aren't suited to dealing with this issue. It must be dealt with by a body representative of all amateur interests. In most cases, such a body doesn't currently exist. Current coordinating bodies would do the amateur

community a service by taking off their spectrum management hats and admitting they aren't the proper representatives to address the issues involved. What we have now is a committee of foxes setup to set fencing standards for the chicken coop.

I have the use of a Hickok KS-15874-L2 vacuum tube tester. It uses plastic punch cards to adjust the settings for each tube type. The tester I have has no punch cards for the very old tubes I want to test, e.g. 24, 26, 27, 80, 71A. Does anyone out there already know the proper settings (electronic) or puch holes for these vacuum tubes? I will be getting a manual for the tester soon, but it is not in hand yet. The tester does have blank cards and a punch tool. Thanks for any help.

>on a VHF frequency, or now, a 440mhz frequency.

Michael is right on this... ...there are lots of reasons to leave the 'pioneers' to be proud of their 440 pioneering for the next quarter-century and head for 1.2Ghz. For that is the land where cellular systems begin to make sense, where antennas are tiny, and where, thanks to Motorola et. al. generating a bit of RF is no longer a major feat.

Heck the SoCal market alone could drive the price of 1.2Ghz rigs through the floor.

And the Jay Maynards of this world can search out a good 75meter/440Mhz all-mode transceiver, to fit their world-view.

Hello everyone,

I am a in need of the documents/schematics for the following:

Heathkit Power Amp.
model HA-202

If you have them and would be either willing to negotate for them
or make a copy of them, please e-mail me. The Heahtkit power amp
ha-202 is a 2 or 3 transistor c-class that had the option for a nice
black case with fins on top. Very nice design, and unfortunately, something
has gone wrong with it. I am representing Synton Amateur Radio Club
of the University of Illinois for this, so it would benefit a ton of
people if you decide to contact me. (we misplaced the documents
unfortunately)

sorry about that last line there.

73's et hope to speak with you soon,

Allen Hall n9rzc@uiuc.edu
Pres. of Synton ARC UIUC (W9YH)

Joe,

> The original post that resulted in all this discussion admitted their use
> of the repeater WAS MALICIOUS. They were trying to interfere. All your
> comments are moot!

Not moot - I was addressing a related issue, not trying to condone interference. Read my later posts for better context. Repetition, last time: I don't condone malicious interference.

Me:
> : If you insist on operating a system closed to all but a select few, it's up
> : to you to secure it appropriately. If you took reasonable measures to secure

Joe:
> Totally disagree. A carrier operated repeater may properly be a closed
> repeater. Obviously, someone who didn't know couldn't be held responsible
> for any "interferrence" but if asked to leave, common courtesy dictates
> they should. And if it is generally known that a repeater is closed,
> shame on you if you just "accidentally" happen to talk on the input.

A closed carrier operated system sounds like an oxymoron to me, unless you have someone playing channel cop 24 hours a day. If you have several members who don't have a real life, maybe you can do that. I said in a previous post I wouldn't hang around if asked to leave, but neither you nor Mike have been able to give a single example of the FCC disciplining a ham for attempting to use an ostensibly closed repeater while otherwise following all regulations -- that is, using proper calling procedures and not causing deliberate interference to other users. (Of course, if no one ever answers a call I don't see why he'd hang around.) I help administer a few repeaters, and would be very interested in an actual case.

Perhaps you are confusing "the right to deny use of my equipment" with "the right to deny use of a frequency". You can do the first, but not the second -- and if the repeater is carrier operated, it does seem that you're trying to reserve exclusive use of the frequency.

It seems you and Mike are trying to invent an interpretation of part 97 that says that telling a user to go away is the same thing as restricting access, and that if the user continues to make use of the repeater, he's guilty of interference. If the FCC has made that interpretation, it's news to me -- and I am aware of the latest ruling that reinforces the fact that there is no legal differentiation between "open" and "closed". If you have a example that does not involve malicious interference, please enlighten me. While I'm fortunate to live in an area almost free of closed machines, it appears from the postings in this group that the method most used to

restrict access is an obnoxious attitude on the part of the owner. While somewhat effective in reality, I do question its legal value :-)

I think I've made several points at least twice over a few postings. I respect differing opinions on the subject, but my requests for an actual example of an FCC ruling that addresses my points have been ignored or countered by more whining from Mike about "welfare-statism". Let's see some facts -- we all know each other's opinions by now. I could be convinced of the legality of your viewpoint, even though I disagree with it, but I'd really like to see specific FCC example that states that merely acessing a "closed" repeater without the intent to maliciously interfere is/is not considered "interference" by itself.

73,

John, NK0R (I am not a lawyer, but find it fun to play the ham legal squabbles from time to time...)

And, since to the FCC all repeaters are "closed", and all trustees
regardless of their machine's "open" or "closed" status have the ultimate
say of who can and who can not access the repeater, then the entire
spectrum management policy issue is moot. Frequency coordinators ought
to be doing what they were intended - to coordinate machines in such a
way as to minimize interference with other systems - without consideration
for their "open" or "closed" status.

Sigh. This is getting tiring. Once again (you might want to print this
out so you can reference it again in case you forget):

1. Nobody has claimed that "closed" (or "open", for that matter) repeaters
'own' their frequency.

2. Nobody has indicated that amateurs cannot operate on repeater input
or output frequencies, even if the repeater is considered "closed".

3. I, and others, have indicated that if someone opts for #2, however,
they have to insure that they do not interfere with the repeater on
those frequencies.

4. "Coordination" is a status which can be granted, taken away, or lost.
When people use the term "taken away" or "lose", they are usually
referring to coordinated status, not to some claim that they "own"
a frequency.

> Oh yes, I'm a dyed-in-the-wool Red. As must be anyone who advocates

The logical extension of your argument is that you should have no
operating limits placed on you at all. If you want to set up an
amateur repeater on 880.50, you should be able to.

> ...and you can salvage the site, the single most valuable commodity.

This is a value judgement. Around here, sites are a dime a dozen.

I guess now FCC statements and rules/regulations == weak ground.

I know several packet operators who give "perks" to people who
donate equipment and money to the system. I eventually expect that
some packet systems will become "closed", especially those with
alot of functions and links.

> I submit that most hams, who can afford to, will support a repeater

Some people can't afford food. Let's socialize food manufacturing and
distribution. Some people can't afford housing. Free housing for all.
Some people can't afford health care. Let's socialize... Ooops, I
forgot, they're already doing that one.

> Our we can all band together in our little cliques and country-clubs,

I believe this to be an overgeneralization. There are many closed
systems which are willing to accept new members. Many closed systems
also allow visitors. Yes, some are cliquey and country-club snobby
too. So what?

Since a repeater trustee is responsible for all traffic rebroadcast through
his/her machine, he certainly should have control operators capable of
monitoring the system all day.

> I said in a previous
> post I wouldn't hang around if asked to leave, but neither you nor Mike have
> been able to give a single example of the FCC disciplining a ham for
> attempting to use an ostensibly closed repeater while otherwise following
> all regulations -- that is, using proper calling procedures and not
> causing deliberate interference to other users.

You're right, I don't know of a specific case which has made it to the
FCC for clarification, as most interference issues are handled through
the OO and Auxiliary. I can say that I work closely with several members
in the OO/Auxiliary program on other issues, and each of them agree that
the scenario you describe would be considered interference.

Again, it boils down to intent. If the intent of the person is to make
a call on a closed repeater, one would have to ask "why?", especially
if nobody is going to come back to him.

Since the FCC has stated that repeater owners can limit who uses the
station, the only option available to a control operator when an
unauthorized user comes on the machine who refuses to leave is to
shut the machine down. If the user keeps coming on the repeater, its
pretty clear his/her intent is to keep the machine off the air by
continually forcing the control operator to shut the machine down.
Is this not interference with repeater operation?

Let's look at a similiar example. You have an open repeater with a
members-only autopatch. Someone comes on the machine, IDs, and proceeds
to attempt to crack the autopatch code. Is this interference? Again,
intent.

Most of these cases around here have never made it past the OO/Auxiliary
stage. Usually by then the offending party finds other things to do or
mysteriously looses interest in ham radio.

If PL is not an access restriction then *NO* form of access restriction
is sacred, since any amateur can figure out how to bring up a machine. Once
someone figures out how to bring up a closed machine, does that give them
the right to operate the station? Even the most convoluted mechanisms
won't work - someone can always figure it out.

(Of course, I'd like to create a RF fingerprint access system, but the
technology is too slow and expensive right now.)

I've no complaint with what they were doing, given their available staffing.
(In fact, I realized some might interpret my comment as criticism and
cancelled the post. You must have caught it in the short period it was
active.) In NH, KC1OX publishes the KY1N Memorial list of scheduled VE exams.
June, which is typical, shows 41 sessions for the 6 state NE area. If you
figure 10 licesnses or upgrades per session and assume its roughly uniform
throughout the country, you get a figure that fits confortably within their
new capability, but it's easy to see why the waiting time has been steadily
increasing.

Greater than 2 MeV Electron Fluence for 04 JUN is: 9.6E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. A six degree long filament,
centered at N23E04, disappeared at approximately 04/1500UT this
period. Otherwise, the disk remains spotless and quiet.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at mostly unsettled to
active levels for the past 24 hours. High latitude stations
did experience some minor to severe storm conditions during the
04/06-12UT time frame. Energetic electron flux (GT 2 MeV)
ranged from normal to high levels over the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet to active for the next two days.
High latitude stations can expect some minor to major storm
conditions during local nighttime. By day three, overall
activity is expected to decrease to mostly quiet to unsettled
with some active conditions expected during local nighttime.

Event probabilities 05 jun-07 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 05 jun-07 jun

A. Middle Latitudes
Active 25/25/25
Minor Storm 20/20/15
Major-Severe Storm 10/10/10

B. High Latitudes
Active 20/25/20
Minor Storm 25/20/20
Major-Severe Storm 15/15/15

HF propagation conditions improved only slightly today.
High and polar latitude paths continued to see periods of
signal degradation, mostly during the local night and morning
sectors. All other regions were near-normal. Similar
conditions are expected over the next 3 days, through 07 June
inclusive.

That's amazing. The most popular, and widest coverage, 440 MHz machine in Atlanta cost less than $500 total, and has had less than 16 manhours total spent on maintaining it in the last 4 years. Like with many other *open* machines, the site and power are donated by a public spirited corporation, in this case a cabinet 970 feet up the WXIA-TV broadcast tower. The machine itself uses conservatively run GE commercial grade radios, bought surplus, and a simple microcontroller by S-Com. Good equipment, properly installed, just doesn't need much maintainence.

I am thinking of getting a Yaesu FT840 HF rig and was wondering

Well, having onlt the 757 to compare it with, I like it alot. the extra memories, of which you have two per mem channel, are both tunable. It also has the ctscss tones built in(too bad no FM unit built in, you need to buy this

separately). As far as the reciever goes it is quite a bit nicer than the 757's , very quite for the price your paying, the shift feature is also very effective for QRM. I use this rig mobile 90% of the time and enjoy it. Now my opinions are very biased, dur to the fact that, I have never owned any other make of radio, and I got the rig for 675.00 brand new. If you can wait for Yaesu days again, the sale price was 729.00. Well i'm certain you'll be happy with whatever your purchase is, because with a good antenna, you'll work the world eventually. 73 N7UJU

 MR/2 2.0 NR Never assume. It makes an "ass" out of "u" and "me".

Sorry if the facts are confusing you, Mike, but my above recounting of
the facts stands. Clara was advised by its very expensive legal counsel
that they would be on much stronger grounds trying to bar certain
individuals from the repeater if the repeater were coordinated as closed.

They consequently applied to the coordinating body to re-coordinate their
pair as closed. The application, in recognition of the above, was granted.

Sorry if the above facts conflict with your view of things.

Actually, assuming that the FCC's new computer system enables it to handle
the applications load with reasonable facility, we should compliment them
on their cost-management. It is proverbial in the management
cost-containment world that it is far more cost-effective to deal with
this sort of process by improving systems (as they have done) rather than
by adding (much more expensive) headcount.

Personally, I don't want instant licensing, and I don't want fees for
licensing, so what they have done seems pretty OK to me.

The real question I am curious about is rather the current torrid rate of
licensing will continue, or whether it will eventually level off. One
might suspect that there was a fair amount of pent-up demand for licensing
which the no-code ticket has solved. Or will the current rate continue or
accelerate?

Beats me!

Well, it certainly doesn't seem too coordinated when you have to
fight to get a word in on the 2M band in Southern Cal. Opening
440 would spread operators out more and give everybody a chance.

Why touch 440? Why not simply move upspectrum to another one of the
amateur bands?

Amateurs are constantly giving lip service to "protecting their
spectrum", yet it appears all they ever want to do is find a yak-box
on a VHF frequency, or now, a 440mhz frequency.

The ARRL repeater directory lists one at 146.880-. You DO have a
reciprocol Mexican license, though, right? Otherwise, you run the
risk of having your radio confiscated by Mexican Customs when you get
off the plane. You of course also need the Mexican license to transmit
there.

That's 6 per state per day. Makes you wonder what it was like before
computers.

Well, remember that the FCC most likely has one person doing applications;
there are 480-man-minutes per day, which means they're spending 1 minute, 36
seconds on each application if they're heads-down for the full day with no
breaks. I'd say they're doing pretty well...but I also understand that's cold

comfort for folks waiting on license processing.

>These exemptions, which most if not all states have, allow unlicensed
>"engineers (who may not even have any engineering education or experience)
>to practice as engineers as long as they only design manufactured goods. Would
>you allow an unlicensed physician, who can only kill one person at a time to
>ractice medicine? How abount an unlicensed automtive "engineer" who could
>kill many people with a single mistake?

That's assuming that having a P.E. means you know what you are doing. Or
that going to college teaches one what the real engineering world is all
about. It takes more than a piece of paper to make an engineer. After all
Apple wasn't founded by degreed or PE'ed folks. Neither was Microsoft...

Does the title of engineer make them one legally? I have been a Field
Engineer, Systems Engineer and Proposals Engineer, but have my college
background in Geology/Meteorology and no PE. (I also had a better
understanding about the real world of engineering and electronics than
a many of my degreed and/or PE'd counterparts.

I'd rather see more emphasis put on licensing managers. After all, the
Challenger was the prime example of management saying "Ship it" when
it wasn't ready you'll ever find. No matter what the engineers or PE's
say, managers have a lot more say in most companies.

Yes, I know thats not ham radio. But this is:

If my antenna(s) get struck by lighning am I liable to my neighbor?
I've had this happen to me with no damage but my neighbors TV got zapped.
(I fixed it, a blown fuse). Any legal eagles have any ideas on this?

I'm opposed in general to most licensing requirements. Even barbers
are required to be licensed.. (because once, long ago, they performed
"surgery") Beautician need to be licenced... I have no idea why.
(but it increases the profits of the beauticians who are licensed by
elimitating competition) I agree that some professions seem to need
licensing, but be careful... lest computer programmers be licensed,
computers be registered (as tools of the trade) because one bug in a
computer program can bring down the entire telephone system, or a
hundred airplanes at once.

The government is protecting us against too much. I'd like to see
that trend reversed.... and (to segue back to ham radio) would like
to see ham radio forever exempted from the "radiation" laws being
passed in New Jersey or Pennsylvaina... In fact, I'd like to see the
laws repealed in general.

Westlink Report Names KD4CKP as 1994 Young Ham of the Year
Louisville Girl Takes Top Honor in Tough Competition

In what one of the evaluator termed "the most difficult choice we have had to make," Allison D. Zettwoch, KD4CKP, was chosen by a select panel of judges over several other well qualified nominees to be named 1994 Westlink Report Young Ham of the Year.

The person selected for this honor must be representative of today's young hams, and Allison Zettwoch well fits that description.

Allison has been responsible for introducing many other young people, especially Boy and Girl Scouts, to the world of amateur radio. She taught a Novice license class to achieve her Girl Scout Silver Award, and regularly assists or substitutes for her father Larry, KR4IF, when he teaches amateur radio classes. KD4CKP has promoted ham radio in Louisville by, among other things, helping to set up demonstrations during local festivals. She serves as the youngest net control operator for the Amateur Radio Transmitting Society's regular Thursday net, and has developed technical skills as well as operating ones.

Allison, active in the Amateur Radio Transmitting Society of Louisville, is comfortable helping less experienced amateurs during Field Day and at scouting's Jamboree on the Air. In fact, Allison has involved a new Explorer post (number 262) in ham radio, including getting the post president licensed and inspired to train others in the post!

Did Allison get dragged, kicking and screaming into the hobby by her father, as many kids reportedly are? No way! In fact, this year's Young Ham of the Year came across an article in a youth magazine which inspired her to seek a license, and brought both her father and her mother into the fold. What about brother Evan? He's not licensed yet, but then he's only 6.

Allison was nominated as Young Ham when she was just 14 years old, but got the word of her winning on her fifteenth birthday, May 12th.

Has she been resting since her nomination? Not according to John Embry, KR4RL, who nominated her. Embry says that Allison continues to be a motivating force among the young people in ham radio in and around the Louisville area. He told Westlink Report that two of the youngsters that she recruited into the hobby have themselves become true leaders in their own right. One, Shannon Metcalf, KD4RER, now serves on the board of directors of a major Louisville ham club.

Embry also says that Allison continues her activities of recruiting young scouts into the ranks of ham radio. At the recent South Louisville Community Festival she actively discussed ham radio with every person who ventured nearby the station and display -- a exhibit that she personally conceived, designed and helped to staff.

In addition to all of this, Allison still manages to maintain a remarkable 4.0 grade point average! She is taking ground school instruction in anticipation of getting a private pilot's license as soon as she turns 16 years old.

KD4CKP says that she loves scuba diving and will be going to China this coming summer as a part of a special school-sponsored event. And Allison has just assumed the job of Editor of "Watts New," the official newsletter of the A.R.T.S. club.

The Westlink Report Young Ham of the Year Award exists in great part because of the ongoing support of Yaesu U.S.A. Corporation. The company has underwritten this program since its inception. On learning of the selection of Allison Zettwoch as this year's winner, Kevin Karamanos, WD6DIH, Yaesu's National Sales Manager, released a statement of congratulations to KD4CKP on her selection.

Karamanos said that: "Yaesu is once again proud to see so many fine young people becoming deeply involved with Amateur Radio. This is the primary reason that we support this award program. To us, Allison Zettwock, KD4CKP, is an excellent example of today's American youth and we join with all of the nation's radio amateurs -- young and old -- in commending Allison on her fantastic achievements at such a young age."

Thanks to the ongoing generosity of Yaesu U.S.A, and with special thanks to the sponsors of the 1994 Sea-Pac Convention, Allison Zettwoch, KD4CKP, will receive her award the evening of Saturday, June 4th, at the convention's banquet in Seaside, Oregon. On hand to make the presentation will be Westlink Report Editor/Publisher Burt Hicks, WB6MQV; Yaesu USA representative Harold Christensen, KG7NB; and Newsline Producer Bill Pasternak,

WA6ITF. It was Pasternak who created the Westlink Report Young Ham of the Year Award program back in 1986. Yaesu USA has served as corporate underwriter ever since, and will present Allison with "something special" to help her continue her ambitious Amateur Radio related activities.

Previous recipients of the Westlink Report Young Ham of the Year include Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986); David Rosenman, KA9PMK, of Muncie, Indiana (1987); Jonathan Binstock, NK3D, of Potomic, Maryland (1988); Erin Marie McGinnis, KA0WTE, of Topeka, Kansas (1989); Mary F. Alestra, KB2IGG, from Staten Island, New York (1990); Richard S. "Sammy" Garrett, AA0CR, of Florissant, Missouri (1991); Angela Fischer, KB0HXY, of Fenton, Missouri (1992); and Kevin Boudreaux, N5XMH, from Terrytown, Louisiana (1993).

Westlink Report and Yaesu U.S.A. Corporation know that the entire world of Amateur Radio join with them in offering congratulations to Allison D. Zettwoch, KD4CKP for her selection as the 1994 Westlink Report Young Ham of the Year!

In other words, "You pioneered the band. We're going to take it away from you.
Don't like it? Tough."

Da, comrade.

> 1. He can open the machine; probably wouldn't change much,
> as the people who 'hang out' on the pair probably will
> continue to dominate it.

You obviously haven't seen a trustee run off of his own repeater by an
invading crowd of users. I have. That's a Good Thing only if you're a
welfare-state communist..."from each according to his ability, to each
according to his needs". Feh.

> 2. He can salvage the support and control systems, and utilize
> them as the core of a new machine with different RF decks
> up on a less crowded band.

The support and control systems pale in cost beside the RF - don't forget
antenna and duplexer as well as RF decks.

> 3. He can sell the machine to the organization who will run it.

For a pittance; after all, they know he'll have no use for it.

>Such is the price of progress.

Da, comrade.

>Yes. That's true. And they moved up because there was a shortage of room
>on 144. Guess what? The problem followed. As it will inevitably follow
>them to 1.2Ghz, after maybe a few good years. Such is the price of
>exclusivity.

They moved up as part of a bargain: "You put your stuff up on 440 and leave us alone on 2." Now you're proposing to renege on that deal. Why should you be trusted in the future to do anything but take, take, take, and steal?

>On the other hand, if amateur radio as a whole decides that open machines have
>priority, and pre-emptive priority where necessary, with reasonable opportunity
>to move, then the courts won't support any self-serving fool who decides to
>buck progress.

Are you prepared to defend that idea with your bank account, not to mention your future livelihood? I sure as hell am not, and those are exactly the stakes.

>Yup. And they can trust just the opposite... ...they will continue to have
>to go up-spectrum to get away from the crowds, just as the country is
>becoming farther and farther away from down-town.

They made a deal. You're proposing to abrogate that deal. Don't be surprised when you start a war; that's what happens when countries break deals.

>So if I decide to put an open repeater on the frequency of your closed
>coordinated repeater in the same coverage area you believe that you must share
>the frequency with me, if nobody is on your machine and I, for example, publish
>my PL tones? And that, as control operator, you will humbly shut down your
>machine if someone from your group accesses it while mine has people talking
>on it?

If your open repeater is also coordinated, that's exactly what I mean...as long as you are willing to do the same.

If, OTOH, your repeater is NOT coordinated, then Part 97 is clear: it's primarily YOUR responsibility to see that there is no interference.

>Is that what you're volunteering? If not, then you effectively 'own' the
>pair for the coverage area, or are claiming some sort of primacy on the
>frequency.

As Part 97 provides. It's NOT the frequency, though. IT'S THE STATION, STUPID! (no, I'm not saying you personally are stupid; that's a play on a campaign slogan from 1992.)

The FCC obviously disagrees with you.

>All the semantics and vested-interest arguments are understood. Those of
>us who believe that open machines come first when the crunch comes simply
>reject them. We understand that it causes burden and expense to closed
>machine users. And we still believe that it's the right thing to do.

Got deep pockets? I can tell you exactly what it'll take to get coordinating
bodies to adopt your agenda: Pledge your financial support to whatever extent
is necessary to keep directors of those bodies, and their families, from
suffering from the inevitable lawsuits arising from that action. Anything
else is simply irresponsible on the part of those directors; I'm not going to
open myself to the kind of liability that would entail.

> Can anyone tell me where to get the FAQ on getting started in amateur radio?

The best and most readily available FAQs are the books sold in every
Radio Shack: the ARRL's _Now You're Talking_ and Gordon West's Technician-
class license manual. They will get you off on the right foot.

If you'd like to save some money, take a look in your local library.
The books they have will give you all the general principles of ham
radio, but the rules and exams have changed a lot in the last few years
so you will want to buy an up-to-date license manual anyway.

Followups to rec.radio.amateur.misc, please.

: They consequently applied to the coordinating body to re-coordinate their
: pair as closed. The application, in recognition of the above, was granted.

How does your local coordinating body define Closed? How does this re-coordination action affect future coordinations on the same frequency? Is there a period of time for all interested parties to comment on the action?

I am aware that the southern california 2meter coordinators have listened to the general user base and made recommendations that some would consider detrimental toward the repeater trustee. How is it that you and the community let a high level Open 2meter repeater change its status to Closed?

Every region of the country has a different set of guidelines for coordination. How about sharing the sections of your local guidelines as they relate to open vs closed coordination. Does southern california allow private 2meter repeaters?

I would think that more repeaters can be packed into a given area using the closed format by trustee agreements alowing for greater overlap. Open repeaters have a more diffacult time with overlapping coverage with other open repeaters as they must take all users including those in overlapping areas. The closed repeater trustee can ask his users to be aware of the overlaps and use consideration or find an other repeater in that area.

Rather than turn this response into a massive research project which
could, conceivably, eat into my beer drinking time, let me answer your
question simply. The group in question let it be known that despite the
"closed" coordination of the repeater, all good operators would be
welcome, and would not be asked to leave. (On many/most closed repeaters
around here, even good operators are often asked to leave, which is why
there are hard feelings in the area.)

This is my understanding of why the "closed" status was granted. The
repeater had turned into a crud-magnet, and they needed to beef up their
grounds for asking certain operators to leave.

Hope this answers your question.

>What isn't yours can't be taken away from you. The airwaves are a public
>resource. The fact that you were in the park first doesn't mean that
>you have the right to pitch your tent and make it your home.

OTOH, you can't be deprived of the use of your property without compensation, either. If the FCC were to change its mind and say that all repeaters should be open, they'd most likely lose a suit charging they'd done exactly that. Coordinating bodies are in a weaker position than the FCC.

>Red-Baiting as a form of intelligent argument disappeared in the 1950's.
>As a stupid diversionary tactic, it fell from favor in the 1970's.

You're entitled to your opinion, of course. Just as I am entitled to my opinion: that you are determined to force repeater trustees to make their hard-earned incomes and labor available for you to use and abuse for no compensation and with no controls whatsoever.

>In this area, too, Mr. Maynard needs to catch up with reality.

I've been a coordinator. You obviously haven't.
I'm a director of the largest single coordinating body in the US. You aren't.

Who deals with reality here?

>Oh yes, I'm a dyed-in-the-wool Red. As must be anyone who advocates
>the outrageous notion that pubic resources made so by Act of Congress
>(radio spectrum) ought to be made available to the public, and be utilized
>at the pleasure of the public.

OK...so go compete with your local TV station on their channel. I'll promise to write you during your stay at Leavenworth.

>I might take your arguments seriously, Jay, if you didn't come across
>as a fringe lunatic who'd probably call Rush Limbaugh a pinko.

Rush is, overall, a kook - but he's right sometimes, too. Ralph Nader - who, from the sound of your arguments, is your idol - is a kook, too, but even he's right sometimes.

>...and you can salvage the site, the single most valuable commodity.

Not always. You have to get the site owner's approval for your system, and if he won't approve a system on another frequency, you're SOL.

>Not necessarily. They may well be decent folks, like most hams. They
>may also realize that a working machine is worth a lot; you don't just
>run down to Sam's Used Repeater lot, after all.

OTOH, there'd be a lot of repeaters come available, by your argument, thus driving down the market.

The trustee winds up getting screwed...and without even a kiss.

>With this point, we see that Jay agrees. 'Da comrade' translates to
>'I understand this to be true, and must concede you this point,' in
>his vernacular. It indicates that he has no response to the point,
>beyond his back-up Red-baiting.

Haw. It's really that I am rejecting your argument simply because that's not the way our society works...but it IS the way you, and Karl Marx, would have it work. That's a bug, not a feature.

>Steal what? The frequency? How can one steal what can't be owned? The gov't
>gave us 200 meters and down in 1912. Have they 'reneged' because they
>changed the rules a few times since then?

You've stolen the value f the system, because you've forced him to operate it under your rules, not his. That's theft, pure and simple, because you control it now.

>Nothing is forever, man. The deal really was 'you move to the upper end,'
>and leave us alone below.

The deal was "you move up there and leave us alone, and we'll leave you alone". They did. You're proposing to go back on your part. That generates lawsuits. Ones that usually win.

>Keep moving. Plenty of room, plenty of room.

Indeed. There's plenty of room for all...and without forcing folks off of their homestead that they've occupied for 30 years and all its improvements, with no compensation. Why don't you try 1280?

>>Are you prepared to defend that idea with your bank account, not to mention
>>your future livelihood? I sure as hell am not, and those are exactly the
>>stakes.
>Gee, what a great hobby.

Them's the facts, man. I don't like 'em either, but they won't go away no matter how hard I wish.

Roger Buffington (rogjd@netcom.com) wrote:

: Rather than turn this response into a massive research project which
: could, conceivably, eat into my beer drinking time, let me answer your
: question simply. The group in question let it be known that despite the
: "closed" coordination of the repeater, all good operators would be
: welcome, and would not be asked to leave. (On many/most closed repeaters
: around here, even good operators are often asked to leave, which is why
: there are hard feelings in the area.)

This does not appear to be a spectrum management issue. By allowing "good"
operators to use their closed repeater they have functioned on the crud
-magnet. Most closed groups only want the "fine business" operators or
they strive for true excellence.

: This is my understanding of why the "closed" status was granted. The
: repeater had turned into a crud-magnet, and they needed to beef up their
: grounds for asking certain operators to leave.

What happens when coordinated closed status does not solve the problem?
Can the repeater trustee ask for coordinated private use of the frequencies?

: Hope this answers your question.

You will not be able to answer any questions until you take the time to
research all of the interrelated issues. Your general understandings are
only opinions. Why not back up your opinions with the documents from the
local coordinating body.

I have a TA-33 up which must be about 20 years old but works fine.
I just ran into a TA-40-KR 40 meter add on kit. When we put it on, the
antenna analyzer showed that the SWR was way out of line on all the bands.
40 was nowhere to be seen, 20 was way off, others not quite so bad. This is
measuring on the ground.

Any ideas? Tnx Bob

You are discriminating. The term bias applies. Regardless of whether or not you like OPEN repeaters, the FCC has said that closed repeaters are perfectly legal.

> That's a hoot! 3000+ hams! We have more than that within a radius of

The FCC recognizes all repeaters are "closed". If you attempt to allot frequency coordinations on the basis of the trustee's willingness to allow operators to utilize the machine at that frequency, you had best be ready to defend your position financially.

> Because like 40,000 other hams in Southern California, I've got a dual
> band 440/2m radio.

Because like thousands of other hams throughout the US, I've got a general coverage receiver/transmitter. Guess that means I should be able to transmit everywhere.

> If you don't consider the relative non-utilization of an entire choice
> band, 440, prima facie evidence of bad management and coordination, well,
> OK. I and others do.

I don't arbitrarilly assign "utilization" as the criteria by which repeaters should be coordinated. There are numerous repeaters in this area which receive less utilization than my closed machine. Using your criteria, we should decoordinate those "open" repeaters.

Since high utilization of an open repeater generally implies excellent coverage, it also implies high site, high power, and expensive equipment.

Sounds like you want a free ride at everyelses expense.

: The easiest way to deal with paper coordinations is to document no activity
: on a particular frequency for a month, and when you hear nothing, quietly
: place an open system on that frequency.

> Not a bad idea, actually.

Its how "renegade" repeaters get 'coordinated' around here. Its
difficult to argue with facts. And, the fact is if you can document
no activity on a frequency for a prolonged period of time, and you
set a machine up on that frequency, the odds dramatically shift in your
favor that if the coordinating body does complain, you have the
evidence to support your position that you were there first.

Its worked for several systems in this area.

can I ask a favor of someone. Please help me get messages in the
Scanner/Shortwave newsgroup. My local BBS that gives me Usenet access
does not carry either of these newsgroups.
and second.. is there anyone who has frequency infor they want to share
or exchange. I don't know which I'll do first, get my ham ticket or
get my wings (pilots license) JOHN /PHX

: ... Catch the Blue Wave!

The default changes. On an open machine, you can use it until you're
told not to. On a closed machine, you can't use it until you're given
permission. Other than that, there's no difference.

Listen, Bub, you might try reading the thread before making comments like
your last article. First of all, you attribute some of Roger Bly's
comments to me, which I don't appreciate one little bit. Let's get it
together.

It's obvious that you have either not read, or were unable to comprehend
the issues in this thread. Everyone here knows that repeaters are not
public property. It has been mentioned by myself and others on this
thread that we agree with the concept of a repeater owner expecting some
kind of support in return for providing the repeater.

Next time how about reading and thinking before writing, hey?

Really? What if the repeater owner wishes to restrict access so that
those who choose to support the repeater have a place to go when they
can't find an open spot elsewhere? What if the owner's concept of
support means you help pay part of the bills associated with upkeep of
the repeater, otherwise you can't use the repeater?

The impression I've gotten is that you reject both of these concepts.
That, to me, indicates you want a free ride at other people's expense.

SB PROP ARL ARLP022
ARLP022 Propagation de KT7H

Solar activity was down again last week. From May 27 through June 1
there were no visible Sunspots, and to make matters worse, there
were several days of disturbed and stormy conditions due to a
recurring coronal hole. The worst day was May 30 when the Boulder A
index was 35.

Conditions will remain unstable until the middle of the month.
Solar flux should gradually rise, but only peak around 85 before mid
June. Around June 25 or 26 disturbed conditions should return.

Sunspot Numbers from May 26 through June 1 were 11, 0, 0, 0, 0, 0
and 0, with a mean of 1.6. 10.7 cm flux was 71.5, 70.2, 70.2, 69.5,
69.4, 69.1 and 67.6, with mean of 69.6.

The path projection for this week is from San Francisco, California
to Cambodia.

80 meters may be open briefly around 1145 to 1245z, and 40 meters
from 1130 to 1330. Check 30 meters from 1030 to 1430. 20 meters
may be open around 0830 to 0945 and from 1400 to 1700. 17 meters
and above do not look promising at this time.

SB QST ARL ARLB049
ARLB049 FCC clarifies action

FCC clarifies action

In response to a request from the ARRL and inquiries from others,
the FCC's Private Radio Bureau has clarified new rules that went
into effect on June 1, 1994. The new rules do not remove the
restriction against automatic control of digital and RTTY

transmitting below 50 MHz.

The new rules, resulting from action in PR Docket 93-85, relax the Amateur Service rules regarding the responsibility for the content of messages on high-speed digital networks. The Commission amended Section 97.109(e), to allow a forwarding station in a message forwarding system to be automatically controlled while transmitting third party communications.

But, the Commission pointed out in a June 2 statement, Section 97.109(d), which was not amended, still limits automatic control of stations transmitting RTTY or digital emissions to frequencies above 50 MHz.

The FCC currently has under consideration two petitions for rule making, RM-8218 and RM-8280, that address this subject. The petitions were submitted by the ARRL and by the American Digital Radio Society.

More information is in June 1994 QST, page 81.

>prosign is beyond me. This goes for QSL, QTH, and all other "Q"
>signals. TRY TALKING ENGLISH. What in the Hell is wrong with that?

Ask Ed if he'll give you some of his prunes, OM. Do you use the CW
prosign ``CQ'' on phone? Why aren't you using the phone equivalent
of it which is ``Hello All Stations''??

Of course no one is going to say `Hello All Stations' on phone but if
you want all CW prosigns stricken from phone then no fair saying `CQ'
anymore.

Let us all know when and on what frequency you'll be on next so we
can all listen to the first ham in history say `Hello All Stations'.

Jeff NH6IL

3497. Re: 440 in So. Cal.

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-05 22:27:42 UTC
From: vanwag@netcom.com
Message-ID: <vanwagCqy3q7.24C@netcom.com>
Source record: 265604

Wow! Make a simple little post about the problems with 440 in So. Cal. and look what happens. All Heck breaks loose. Just for the record, I am a dues paying member of an open 440 repeater. I own a dual band HT because the trustee of the repeater group I belong to is also the man who taught the class and headed the VE team for the test session where I got my Technicnian Plus HF license. The only reason I haven't upgraded yet is that I was asked to be control op of the Novice/Tech station for Field Day. Since I would not be able to do that if I had gotten my General, I have put off testing. As you all may be able to tell from my call, it is quite recent. I am offended by the "no-clue" reference, particularily since the worst offenders in the L.A. area are constantly bragging about their Advanced and Extra Class licenses while they are not jamming and violating every other paragraph on Part 97. On the other hand, most of the no-code operators I know are good ops.

Probably the most important thing is that this is supposed to be a hobby and a public service, not a name calling, politics baiting, rude shoving match. I don't care how long you've had your license, how much you have invested in equipment, how fast you can copy CW. If you want to restrict the earned priveleges of other amateurs, you are a lid. Plain and simple. Think back. When was the last time you elmered someone? When was the last time you did something constructive for the hobby? Or are you a "I got mine, later for the rest of you" ham? I'm starting to think that there should be a Public Service requirement for higher license classes to stop them from getting complacent and too far removed from the roots of the hobby.

(lowering podium)

BTW, someone did email me some freqs for open 440 repeaters in the San Fernando/San Gabriel Valley area. When you come right down to it, that's probably the most constructive thing to come out of this thread.

George KE6EPC (God help me, I started all this)

Just because communism failed in the Soviet Union doesn't mean that the
basic idea of what communism (or more accurately I think, socialism) is
has gone away. Apparently many still feel it's a good idea. <Sigh>

Stick to your guns, Jay. You ain't wrong.

: >The great majority of hams believe that the federal government should and
: >does own all radio frequencies. If one accepts that idea, then if the FCC
: >says "all amateur repeaters shall be open", the Great OZ has spoken.

: The FCC has said exactly the opposite: "all amateur repeaters shall be
: closed". The Great OZ has spoken. They're not listening.
: --

The guys we are discussing this with aren't listening, either. Their
minds are made up, don't bother them with the facts.

By the way, an important note here is that the FCC doesn't really claim to
own "all" the radio frequencies. The FCC considers many frequencies
(including the 440 band most in question here) as "owned" by the federal
government or the military. We've already seen they care little about
what we do in that spectrum unless someone from the "military or
government" complains. <Another sigh>.

DOVE-OSCAR-17 (DOVE) Voice Synthesizer Now Being Tested

The satellite is now speaking the phrase "HI, this is DOVE in space" for one minute of every four minutes. "HI" has been traditionally sent from Amateur satellites since OSCAR-1, so it seemed appropriate for this re-activation of the voice synthesizer in DO-17. The team will continue to work on improvements, including possibly raising the amplitude of the voice, which is presently about 1/2 that of the telemetry.

The speech software has been completely reloaded over the past 3 days. The S-band transmitter is presently turned off. Transmitter power will be optimized over the next few days while maintaining a positive power budget. Reception reports are welcome and please send them to PY2BJO. Telemetry is not needed at this time.

[The AMSAT News Service would like to thank Jim White (WD0E) for this bulletin item. Jim also wishes to acknowledge the other members of the DOVE Ground Command Team of WJ9F, VK7ZBX, N5AHD, NK6K with additional support from WB6LLO and K0RZ.]

OFFICIAL LO-19 STATUS REPORT

HR AMSAT NEWS SERVICE BULLETIN 155.02 FROM AMSAT HQ
SILVER SPRING, MD JUNE 4, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-155.02

Official LUSAT-OSCAR-19 Status Report

On 01-JUN-1994, during orbit #22739, the CW beacon was turned back on. This operation was performed by the control station of Norberto Pennini (LU8DYF) and by the station in charge of the CW beacon, Ruben Ferreiro (LU6DYD).

At the same time, LU8DYF, turned OFF the "B" transmitter (437.125 MHz) and turned ON the "A" transmitter (437.150 MHz). While this procedure was happening place, LU6DYD was capturing some telemetry. Then, when LU8DYF

finally swapped the transmitters, and LU8DYD sent the necessary "pseudo-random" (PN) command sequence which subsequently turned on the CW beacon. After more than 9 months of being turned off, the CW beacon was started up again without any problems.

On 02-JUN-94, during orbit #22754, the CW beacon was turned OFF. This operation was again performed by LU8DYF and LU6DYD. LU6DYD turned OFF the CW beacon and LU8DYF agained swapped the two transmitters to be sure they were both working properly. At the present time, the CW beacon is presently OFF and the "B" Raised Cosine PSK transmitter (437.125 MHz) is now ON.

The LUSAT-1 Recovery Team encourages those stations that have collected telemetry reports during this period to send them to LU8DYF for analyses purposes.

Overseas stations: If you capture any LUSAT-1 telemetry and send the "raw" satellite telemetry to the satellite control station, you will receive a certificate for your help. These telemetry reports can be sent either via packet radio to LU8DYF@LU8DYF.BA.ARG.SOAM and LU8DYF@ANY-ACTIVE-SATELLITE, or via Internet to: lu8dyf@asarin.org.ar

If you intend to use the satellite, please remember that the BBS is NOT LOADED and it will NOT be operational for the next 2 weeks (approx.).

The LUSAT-1 recovery team want to thanks all the stations that sent LUSAT-1 telemetry data in RAW format.

The overseas stations that are will receive the Special Award are:

1) Mr. Norimasa Okamoto (JN2LHU) from Gamagori, Japan.
2) Mr. Bent Bagger (OZ6BL+OZ7SAT) from Denmark.

73's de Eduardo Sweet, LU7AKC (LUSAT-1 recovery team)

SB SAT @ AMSAT $ANS-148.01
CALL FOR PAPERS

HR AMSAT NEWS SERVICE BULLETIN 148.01 FROM AMSAT HQ
SILVER SPRING, MD MAY 28, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-148.01

Call For Papers For The AMSAT-NA Space Symposium & Annual Meeting

The 1994 AMSAT-NA Annual Meeting and Space Symposium is to be held Oct. 7-9, in Orlando, FL. This is a call for papers and presentors. Come help us celebrate 25 years of AMSAT in Space. Share your experience with the amateur satellite community. We need your help to be a success. Editing, formatting, graphics and even typing can be provided. Even if you cannot attend, please consider a paper for publication.

Topics for all amateur satellite disciplines are sought. The following is the schedule for receiving papers for the Symposium:

Author and Title requested ASAP.
Compose a short abstract by July 1.
Final drafts are requested on or about August 26.

Direct your inputs and inquiries to:

Steve Park (WB9OEP)
12122 99th Ave. N.
Seminole, FL 34642
Phone: (813) 391-7515
Internet: SKPA@QMGATE.ECI-ESYST.COM
Pkt Radio: WB9OEP @ W4DPH

Join us in Orlando, FL for the fun and festivities. For more information about the Symposium, contact AMSAT-NA Headquarters at (301) 589-6062.

K9PVW BECOMES A SILENT KEY

HR AMSAT NEWS SERVICE BULLETIN 148.02 FROM AMSAT HQ
SILVER SPRING, MD MAY 28, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-148.02

KARL O. "K. O." LEARNER II, K9PVW, SK

An old friend to many in the amateur satellite world and long-time AMSAT member, "K.O." LEARNER II (K9PVW) became a Silent Key (SK) recently. "K.O" died on 16-May-94 at his home in Kokomo, Indiana. He was 49. For many years, "K.O." organized the AMSAT booth and programs at Dayton, worked tirelessly as an AMSAT area coordinator, and ran a local AMSAT Net. Also, many will remember him as the Net Control Station for what is today known as the "OPS Nets" in the early days of AO-13. "K.O." worked as an engineer for Delco Electronics in Kokomo. AMSAT-NA Headquarters wishes to express its condolences to "K.O's" family and friends and will remember him as a patient "ELMER" to many beginners trying to make their first contacts on the OSCARS.

[The AMSAT News Service (ANS) would like to thank Martha Saragovitz of AMSAT-NA Heaquarters for this bulletin item.]

SB SAT @ AMSAT $ANS-148.03
DOVE STATUS

HR AMSAT NEWS SERVICE BULLETIN 148.03 FROM AMSAT HQ
SILVER SPRING, MD MAY 28, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-148.03

DOVE-OSCAR-17 (DO-17) Status Report

On 25-MAY-94 at 05:25 UTC the DOVE Ground Command Team started loading and executing test software designed to assure the operation of the voice module after several months of dormancy. A brief test of the voice capability generated only garbled voice, so it was turned off. The Team is now investigating possible causes, and at this point believe it is a software problem, not hardware.

For the next few days DOVE may be in various modes as the Team continues testing and/or loading new software. The S-band transmitter will remain off. Telemetry reports are not needed at this time.

[The AMSAT News Service (ANS) would like to thank Jim White (WD0E) for submitting this bulletin item. WD0E can be reached at his INTERNET address of wd0e@amsat.org.]

SB SAT @ AMSAT $ANS-148.04
OFFICIAL LO-19 STATUS REPORT

HR AMSAT NEWS SERVICE BULLETIN 148.04 FROM AMSAT HQ
SILVER SPRING, MD MAY 28, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-148.04

Official LUSAT-OSCAR-19 (LO-19) Status Report

The satellite LUSAT-1 (LO-19) appears to be healthy. The software load was intentionally stopped when the second module was just loaded and turned on. The next step will be to continue with the satellite's deep tests. The

satellite is sending telemetry on 437.125 MHz and its digipeater is turned on for now. To All Overseas Stations: If you have captured any LUSAT-1 telemetry you are requested to send the "raw" telemetry to the satellite control station and you will receive a certificate for your efforts. These tele-metry reports can be sent either via packet radio to: LU8DYF@LU8DYF.BA.ARG.SOAM and LU8DYF@ANY-ACTIVE-SATELLITE, or via Internet to: lu8dyf@asarin.org.ar

If you intend to use the satellite, please remember that the BBS software is NOT LOADED and it will NOT be operational for the next 3 weeks, approx-imately.

We wish to thanks LU8DYF and all the other stations that helped in the LUSAT-1 recovery: LU1DBC, LU1EXC, LU1FYZ, LU2BDT, LU2FHE, LU3AGY, LU4AGC, LU4FIO, LU6DYD, LU7ABF, LU7AKC, LU7DSU, LU7XAC, LU8ENU and LW1EEO.

73's de Eduardo Sweet, LU7AKC (LUSAT-1 recovery team)
packet: lu7akc@lu7akc.#col.cf.arg.soam
e-mail: lu7akc@asarin.org.ar

SB SAT @ AMSAT $ANS-148.05
WEEKLY OSCAR STATUS REPORTS

HR AMSAT NEWS SERVICE BULLETIN 148.05 FROM AMSAT HQ
SILVER SPRING, MD MAY 28, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-148.05

Weekly OSCAR Status Reports: 28-MAY-94

AO-13: Current Transponder Operating Schedule:
L QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 May 07-Jul 11
Mode-B : MA 0 to MA 170 |
Mode-BS : MA 170 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-BS : MA 230 to MA 250 | Alon/Alat 230/-5
Mode-B : MA 250 to MA 256 |
Omnis : MA 250 to MA 120 | Move to attitude 180/0, Jul 11
[G3RUH/DB2OS/VK5AGR]

FO-20: The analog mode will be continued indefinitely.
[Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]
`

KO-25: Please note that the KO-25 uplink was switched back to 145.980 MHz. The downlink is 436.500 MHz. [K6OYY]

AO-16: AO-16 is chugging along, the only 1200 baud BBS bird running. [WH6I]

LO-19: LO-19 is undergoing re-uploading of software. The ground controllers state that it will not be available for general use for about a month. [WH6I]

IO-26: IO-26 is also in the software uploading process. Apparently both birds, i.e., LO-19 & IO-26, suffered SEUs at about the same time. [WH6I]

MIR: MIR'S BBS is up and running. It seems that whatever electrical power problems they were experiencing aboard MIR have now been sorted out. ZR5JRS has worked the MIR BBS on a number of occassions over the last week with only a few problems. The only problem he has experienced is with users down-range that do not send the disconnect command before MIR goes LOS at their QTH. If a several users forget to send the disconnect, ZR5JRS find that nobody can not get in since the BBS has not yet given a time out. Please don't forget to send a disconnect command before MIR goes "over-the-horizon" at your QTH. [ZR5JRS @ ZS0HFS.NTL.ZAF.AF]

RS-10\11: This satellite, as usual, is working extremely well and ZR5JRS has made many contacts throughout Southern Africa with good 599 signals. ZR5JRS notes that it is very pleasant to see a small but revived interest in RS-10 in South Africa. He hopes that it will last. [ZR5JRS @ ZS0HFS.NTL.ZAF.AF]

KO-23: Some new earth images are now showing up on KO-23's BBS. WH6I notes that so far none of the images he has looked are very spectacular. [WH6I]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

3501. US ARMY RADIOS

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-05 23:13:00 UTC
From: Dave.Smith@eccles.seuk.com
Message-ID: <937_9406060709@seuk.com>
Source record: 265569

Hi,
I am trying to find out where I might be able to get hold of any parts or manuals on the following US Army Radios.

PRC-6 7 &8

PRC-25

these were the main back pack radios used during the Vietnam War by US troops

any one how has or knows of were I might be able to get hold of manuals or radios them selfs let me know please. I have been trying to get at least one of these radios for some time. I mainly want the PRC-25..

any help at all would be greatfully recieved.

Regards,

Dave G7PKS.

SB DX @ ALLBBS $OPDX.161
Ohio/Penn DX Bulletin No. 161

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 161
BID: $OPDX.161
June 6, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, F8RU, KB2R, AD1C, AA1EY, KF8VW, WB8ZRL and N0TG for the following DX information.

4U1ITU, ITU HEADQUARTERS (GENEVA). Len KB2R, will be active during the IARU HF Championship Contest (July 9-10) and two days before. This will be a single operator effort and the 4U1ITU station counts as a HQ multiplier for the contest. Activity will be on 80-10 meters and possibly 160 meters. The two days before the contest, Len will be active as time permits on 80-10 meters CW/SSB and on the WARC bands if antennas are available. QSL the entire expedition (contest and pre-contest) via WA2CJT, bureau or direct (94CB).

9U, BURUNDI AND FRENCH QSL TIP. Since the current activity by Jean-Pierre, 9U/F5FHI, in Burundi, the OPDXB readers have been looking for F5FHI callbook address. QSL to: Jean-Pierre Maidon, La Hee, F - Vertou, 44120, France. Ted, F8RU, has passed on the following QSL tip for the OPDXB readers. The F5 + 3 letter suffix calls are a result from a new French callsign reassignment policy. Until an updated version of the CallBook is published, look for these suffixes under the following prefixes in the 1994 and earlier CallBooks: F1, FC1, FD1 or FE1. Meanwhile, Ted also mentioned that Jean-Pierre, F5FHI, and Paul, F6EXV, are both employees of UNHCR (United Nations High Commissioner for Refugees) and are presently on a mission in Burundi (after they had to leave Rwanda). Jean-Pierre continues to be active on 21295 kHz between 1430 to 1630z.

D3, ANGOLA. It was reported that Antonio, D2EGH, will be signing D3X for the next three weeks. There was no reason that was given for the special callsign, but his daily activity has been on 14195 kHz between 2000 and 0130z. QSL via CT1EGH.

CY9, ST. PAUL ISLAND. Be looking for Paul (WC9E/CY9), Bob (AA9GZ/CY9), Scott (N9JCL/CY9), Ken (WB9OBX/CY9) and Tom (K0SN/CY9) starting June 10th (for a 4-5 day operation). Activity will be on CW/SSB/RTTY and on all bands. QSL via K0SN.
Meanwhile, Randy, N0TG, reports that their upcoming CY9 DXpedition has been moved from July 1st to September 19th (ending the 25th). This early fall propagation should offer better conditions than a summer date. The boat charter has been reserved, the Coast Guard landing permission has been received and the travel arrangements have been made. Operators will be Randy/N0TG, Bob/KW2P, Murray/WA4DAN and Ron/AA4VK.

FRENCH ISLANDS TO BECOME MORE ACTIVE! There is rumor stating the French government is going to be doing a lot of electronic updating on the French islands located in the Indian Ocean this summer. As a result, it is thought that there may be a lot of amateur radio activity because of the French amateurs involved in this upgrading. Those that need these islands, KYFC (Keep Your Fingers Crossed).

FO, AUSTRAL AND MARQUESAS ISLANDS. It has been reported that Kan, JA1BK (FO0MIZ), and Nao, NX1L (FO0AKI), have gone QRT earlier than expected from Marquesas. No reason was given. After their Marquesas operation, Nao was to be active from Austral Islands and Kan was to be active from Tahiti, but there have been no signs of activity as of June 5th.

JA BAND AND POSTAL CHANGES. Masa, JH3VNC/WG2P (Editor of Five-Nine 80/75 meter DX band column) reports that on May 20th, Japanese Postal and Telecommunication services announced to release another 75 meters band window which is from 3747 to 3754 KHz. Total windows on 75 meters are now 3500 to 3575, 3791 to 3805, and 3747 to 3754 KHz.
A fax received from Nao, JH1HGY, reports that air mail charges were increased in January. Just sending a green stamp to Japan now will not cover return postage (for a 10 gram letter) from most place other than Asia and Guam. For North and Central America, Europe, CIS, Middle East and CIS it costs 110 yen to send a 10g letter (190 yen for a 20g), while it cost 130 yen (230 yen for a 20g) for South America and Africa. A green stamp is worth only 100 yen, but an IRC is worth 130 yen (which is sufficient).

JW, SVALBARD. Tom, LA4LN, and Magne, LB3RC, will sign JW4LN and LB3RC/JW respectively from the western coast of Vest-Spitsbergen from August 1-20. This is a scientific expedition and NOT a DXpedition, but they will be operating all bands 160-10 meters with special attention to the WARC bands. Activity will be on CW, SSB and the digital modes in the mornings, evenings and when the weather is bad, and also when they do not have to chase away the dangerous polar bears! QSL direct only with SAE and return postage to the respective home calls. NOTE that the LA4LN Callbook address is wrong! Here are the correct addresses:
JW4LN via LA4LN, Tom Victor Segalstad, P.O. Box 15 Kjels}s, N-0411 Oslo, Norway. LB3RC/JW via LB3RC, Magne Nicolaysen, \stgaards gate 23 B, N-0474 Oslo, Norway.

KH0, MARIANA ISLANDS. Jun, WH0AAV, on Saipan, was heard on 3795 kHz at 1240z. Also check 14226 DX net around 0330z.

TT, CHAD. Another new station has shown up from here signing F5LGF/TT8. No other information is available at this time other than the operator's name is Chris. This station has only been heard on 20 meters CW between 2000 and 2200z.

V6, MICRONESIA. The DX NewsLetter (DXNL) reports V63PA will stay on the island longer than expected. He prefers 14150 kHz around 2100 UTC during the weekend. QSL via G6MDM. Meanwhile, a group from the Oklahoma DX Association (OKDXA) and a few operators from the Pacific will have four stations up and running from June 8 to 17. Activity will be on all bands CW/RTTY and WARC bands. Be looking for V63AD, V63BC, V63FC, V63KW, V63SB and V63VA and QSL all via OKDXA, PO Box 88, Wellston OK 74881.

VE1, MCNUTT ISLAND (NA-126), CANADA. Tom, WT2O, and Larry, K5MK, will be signing /VE1 from this Nova Scotia Province South Group June 17-19th. Activity will be on 80-10 meters including the WARC bands. It is suggested to check the IOTA frequencies and for CW, check 30 kHz up from edge band (+7005 kHz). QSL all contacts to K5MK.

ZF, CAYMAN ISLANDS. Randy, N0TG, will be active as ZF2GT from June 23-30th. Emphasis will be on CW and the WARC bands. QSl via CBA.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 5/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 5 JUNE AND FORECAST UP TO 8 JUNE

IPS Warning 15 was issued on 26 May and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 068/002

1B. SOLAR FORECAST
06 June 07 June 08 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 070/005

1C. SOLAR COMMENT
Spot-nil has been recorded for the past 12 days.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly unsettled, apart from active
levels 18-21UT.

Estimated Indices : A K Observed A Index 4 June
Learmonth 15 2333 3343
Fredericksburg 18 21
Planetary 18 22

Observed Kp for 4 June: 4444 3334

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Jun 20 Unsettled to active.
07 Jun 20 Unsettled to active.
08 Jun 15 Quiet to unsettled.

2C. MAGNETIC COMMENT
Disturbance expected until 7 June due to a coronal hole. Activity is
not expected to exceed active levels locally for the remainder of the
disturbance period.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Jun normal normal-fair poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Jun normal normal-fair poor-fair
07 Jun normal normal-fair poor-fair
08 Jun normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values, apart from 15-30%
depressions 18-20UT.

Observed T index for 05 June: 22

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
06 Jun 30 Near predicted monthly values.
07 Jun 30 Near predicted monthly values.
08 Jun 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Local propagation conditions appeared fair yesterday, with regular
sporadic E layer and night-time Spread F. Normal-fair conditions are
expected for the next three days.

Hi Nate, there was a whole list of numbers that meant something on telegraph.
I saw the list back in the '50s but I can't remember where. It was like
"Q" signals or "10-x" signals... just shorthand. I remember the first time
a YL signed "88" instead of "73" and I had to go look it up. As I remember
the list, "73" simply meant "goodbye" in which "best of 73's" would mean
"out of all possible goodbye's, pick out the best one from me to you"...
like "fair thee well" or "go with God" instead of "go to hell". The pure
of spirit, like me, will continue to say...

best of 73's, KG7BK, CecilMoore@delphi.com

3509. Re: Radio Shack DSP

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-06 00:41:16 UTC
From: wb6w@netcom.com
Message-ID: <wb6wCqy9ws.B9z@netcom.com>
Source record: 265615

I've done a bit of playing with my RS DSP box/TS-50. The CWfilters are a

significant improvment over the Kenwood CW xtal filter. (The Kenwood has lousy skirts compared to the RS DSP or the Icom 720A though I'
I've found that it's just dandy for HF digital).

The noise rejection seems to workonly on noise that is VERY incoherent. Most HFnoise seems to be a mixture of harmonics of 60Hz from various sources. This 60Hz "comb" is far from incoherent and at the same time has far too many cx's to be notched out. I've found (and my local RS store confirmed) that the noise reduction works fine on unsquelched FM-type noise. On 10 meters, in FM mode, with no signal other than receiver noise, the RS DSP box is almost like having an outboard squelch (though not quite that good).

My statements posted to USENET are never inappropriate.

I've had this same argument with dozens of other people over several
years in this same newsgroup, so let's do them all a favor and move it
to e-mail if you think my term "no-clue" is 'inappropriate' and save
them the drudgery of rereading all the same arguments which they
themselves posted years ago.

Some people really have no clue.

Comments like that are not helpful or contributory. They simply have a
tendency to piss people off. I seem to recall you lecturing somone on
this thread about how this or that behavior would cause the person to not
make many friends. Accusing others of "want(ing) a free ride....."etc.
is just a way to disregard the real thrust of what is being discussed
here and instead lower the quality of the discourse to a level you are
for some reason more comfortable with.

If you feel that a repeater owner has the right to operate a coordinated
machine any way he wants, and so forth, that's your privilege. I may
disagree with you, and that too is my privilege. Discussing it in a
gentlemanly way is both our privileges. But let's try to keep the
discussion at a higher level than name calling.

And neither of these methods are realistic for normal, end-user access
to the machine. Perhaps for control functions, but certainly not for
everyday access. Some reasons why:

1. The equipment to perform this function is not widely available to a
majority of users within the existing radios sold by equipment
manufacturers (although some are starting to include DTMF squelch as
"standard" options).

2. Requiring a third frequency for control purposes reduces the amount of
available bandwidth for others to use. Now a repeater will take three
frequencies instead of two.

3. The complexity of activating the machine may be more complicated than
some people can understand properly.

> All I said was that if a particular trustee doesn't want a particular
> ham operating on a machine, then the trustee needs to either shut it off or
> use an effective access mechanism.

There is no such thing as an "effective access mechanism". PL, DTMF
squelch - they all can be broken in a matter of seconds if you have the
right equipment. Activation via a third control frequency is not
practical - its simply not possible without additional equipment or
modification to existing equipment.

About the only way to truely restrict access would be to use a RF
key-down signature fingerprint and compare it against a database of
valid users. Even this is not practical - the amount of time required to
take a snapshot at keydown, look up in the database, find a match, and
open the squelch would clip the first second off each person's
transmission. Not to mention we generally don't authorize radios, we
authorize people, to use closed machines.

Subjective value judgement.

> The only constraint is that you're expected to join a group if want
> access to autopatches.

Well, we ought to de-coordinate them in favor of machines with completely
FREE autopatch access, damnit! Why should the cost of running an
autopatch be any different than the cost of electricity, site rental,

or maintenance? Open up those frequencies to someone who is willing to
give free autopatch. That's certainly serving the amateur community or
the public as a whole more effectively than a machine with a members-only
autopatch does.

Subject: Loop Antenna
To: info-hams@ucsd.edu

I worked all over Europe on 40m from here in G-land with a 4foot
diameter loop indoors. I could turn it to null out the local QRN from
power lines, running only 7 watts, due to the poor capacitor I was using.
I have one for 80m now, compared it with a not too higher straight
G5RV, sometimes one was better than the other.
One G-station reported that when his beam was destroyed by high
winds, he made a loop, stuck it on top of his tower and had no difficulty
in maintaining his daily sked with VK using 60 watts.
Would suggest building one (a lash-up would do), give it a try, you'll
be tickled pink at the performance.

: Agreed, the closed repeater owners would have the same rights as the rest
: of us. They simply wouldn't have rights over and above the rest of us,
: namely, coordination for a repeater pair on a closed or private basis.

Roger, what you are suggesting is to take the rights away from the already
existing closed repeaters, not to fairly make the rights equal. This is
exactly analagus to some of the so called "equal rights" legislation that

came out in the 60's and 70's. The bottom line is both types of systems
are equal . . . in the eyes of the FCC . . . and that's as it should be.

: Once 440 reached the level of openess found on the model band, 2 meters,
: perhaps this could be relaxed.

In some parts of the country, read that "level of anarchy" found on the
model band, 2 meters.

: The current 440 coordination group has abused its authority recklessly.
: This can be seen quite clearly by the disuse into which Southern Cal's
: 440 band has degenerated.

I live in Texas, but I'm a welcome visitor to a number of those 440
"closed" repeaters when I visit southern California. On my 440/1.2 Gig
dual band talkie (notice no 2 meters), I hear lots of 440 (and 1.2 Gig)
activity. There may perhaps be paper repeaters, and that's not good.

: True, but the ones in Southern Cal are happy with the paper radios. If
: not, then why are they coordinated?

If SCRUBA is ignoring this, then they are at fault . . . but my guess is
they are not ignoring it at all. Until you have been a frequency
coordinator, don't be so quick to gripe. You don't understand their
problems.

: : are inexpensive today? If 440mhz doesn't present the level of "openness"
: : you like, then why not move up to 1.2ghz?

: Because like 40,000 other hams in Southern California, I've got a dual
: band 440/2m radio.

Why is it that 39,994 southern california hams are able to use closed repeaters in the area, and just a hand full seem to have problems? Some of the greatest abuses take place on the open repeaters. Whole groups will shun newcomers or ignore them. Many open 2meter repeaters are by far more closed in general attitude than many closed 440 repeaters. How about all the open 2meter repeater groups with closed 440 repeaters for the exclusive use of their supporting club members?

You might want to dump your 440 dual band radio while you can still get ten bucks for it. Get a real radio maybe a tri-bander with 2meters, 6meters and 1280Mhz. Your group of hams could have an open 1280 repeater operating from any high level site in southern california this summer if you really wanted to show the rest us us how well it works. I know it works better than 440 any day, no radar or pager intermod. It works better than 2meters, not an other open beep-boop box 40 miles up the road.

If you want a good technical challenge, show us your open 6meter repeater, there are frequencies available, and lots of cheep junk equipment to use.

: : > The current 440 coordination group has abused its authority recklessly.
: : > This can be seen quite clearly by the disuse into which Southern Cal's
: : > 440 band has degenerated.

: : The only evidence I have seen related to band mismanagement posted here
: : by those who seek to eliminate closed repeaters from 440mhz are "paper"
: : repeaters being maintained by the coordinating body. And, while I agree
: : that this is improper, there are ways to deal with it above and beyond
: : eliminating closed systems on 440mhz.

In an other thread a fellow in San Diego posted " there were repeaters on all the 440 frequencies." This goes to show that a paper repeater does not last in a crowded market place.

: If you don't consider the relative non-utilization of an entire choice
: band, 440, prima facie evidence of bad management and coordination, well,
: OK. I and others do.

This is not a coordination management issue. What you are hearing is vary poor management by the coordinated repeaters and remote base stations. Management style can not be regulated by a coordinator. I would agree there are many repeaters on all bands that are just empty warehouses.

I would suggest that there are not enough amateurs in southern california interested in talking on 440 to make the band sound like the popular watering holes found on some 2meter frequencies. Here in the san francisco bay area most of the activity heard on a dual-band radio is from the closed 440 repeaters. This was really brought to my attention by many tourists visiting our area. They could not get over the shear numbers of groups using the 440 band, nothing like it at home.

: : > True, but the ones in Southern Cal are happy with the paper radios. If
: : > not, then why are they coordinated?

: : The easiest way to deal with paper coordinations is to document no activity
: : on a particular frequency for a month, and when you hear nothing, quietly
: : place an open system on that frequency.

Most coordinating bodies have a take away procedure. Follow the local
procedure. Who wins when the paper repeater comes back to life when your
"quiet repeater" shows up on their coordinated frequency? They do! unless
you have followed the procedure and the coordinating body has taken away
the previous coordination. Remember you still have to get agreements from
the other repeaters on your frequency.

Following the policy and procedures of your local coordinating body is
: Not a bad idea, actually.

> If PL is not an access restriction in the historic and common sense then
> touch-tone is not sacred.

Agree, tones on the imput frequency are not a very secure mechanism. I have
no clue what the FCC would say -- except that a tone sequence to enable a 2m
repeater would have to be on other than the input frequency anyway.
Just my opinion, but I view PL as more of a necessity to clean operation than
an access mechanism. My personal idea of an effective access restriction would
be to require a tone sequence on a control frequency to open the repeat
function, or a digital-burst squelch type of mechanism on the input frequency.

> Why do you want to shut off or deny the repeater group their pleasure?
> Please remember that the repeater or 40 meter net is on a fixed
> frequency. Your station has the ability to change frequency or bands at
> the flick of the wrist. The Commission has ruled at length on these
> issues in the many cases that have plaged nets and repeaters.

Huh? All I said was that if a particular trustee doesn't want a particular
ham operating on a machine, then the trustee needs to either shut it off or
use an effective access mechanism. A good access mechanism can be secure
and not deny access to any members of the "closed" group. If it makes it

slightly more difficult, then that's the price of exclusivity, IMO.
I certainly am not advocating sitting on the frequency to attempt a denial
of access type of attack on the "authorized" users. That would definitely
be considered malicious, and I would never advocate deliberate interference.
I just don't see how mere ordinary use of a repeater, while operating within
the rules, would fall into that category.

> John, your intent is showing...have you forgotten the rule about good
> amateur operating practice? This is the catch all... ;)

> Bob

Intent? No. Philosophy, probably yes. I personally would not continue to
operate on a machine if someone told me I wasn't welcome, unless an
emergency existed, regardless of legalities. (BTW - that hasn't happened
in 15 years of operating. But I haven't been to Rhode Island yet. :-))
I don't personally consider it a good practice and I've got better things
to do than to hang out where I'm not wanted. I do believe that while there
are a few exceptions, repeater operators that maintain "closed" systems do not
serve either the amateur community or the public as a whole as effectively as
open systems. Outside of a few experimenters with exotic setups, I don't
think there's any point to putting up a repeater if your intent is not
to do good for the community. If large chunks of 440 in California actually
sit idle while "occupied" by repeaters closed to all but a few, I think it's
an inappropriate use of valuable spectrum. At the very least, other open
machines could be coordinated co-channel with these systems, using
different PL's and mutual lock-out to eliminate interference. Coordination
does not guarantee exclusivity in the business bands -- why should it in
the amateur frequencies?

Repeater owners that whine about having users support the cost of their
systems as an excuse for operating a closed machine are usually just looking
for an excuse to play channel cop. I'm well aware of the costs of
building and maintaining repeater sites, having been involved with several
groups and getting up close and personal with the hardware many times.
I've yet to see a good open system that didn't pay its own way.

The largest and most successful systems in this state,
including a state-wide linked network, are run by groups that welcome all
users, and they have continued to add and upgrade equipment and services based
on voluntary donations and memberships. These groups provide all forms of
emergency and special event support, as well as regular access at all other
times. The only constraint is that you're expected to join a group if want
access to autopatches. Regular users are also encouraged to join -- usually
by receiving an invitation on the air or in the mail -- and many do. New
hams usually rapidly pick up on the idea that you should join the group(s)
whose repeaters you use the most -- without coercion. Occasional users and
travelers are always welcome. These open groups, in my opinion, are operating
in the intended spirit of amateur radio -- unlike those that seem to operate
on the concept that a user is not welcome unless invited to use their
private repeater, which usually serves no one but their (often few) members.

Probably my last word on the subject....

73,

John, NK0R

Yup, this is the age of "feel good" politics. Back in the '60's the young generation created "feel good" politics, but now that they are coming of age we're going to see more of this in the mainstream political scene. Free health care for everyone, free food for everyone, free housing for everyone... "Hey, I'm BREATHING, aren't I?!?! It's my RIGHT!"

> The guys we are discussing this with aren't listening, either. Their
> minds are made up, don't bother them with the facts.

True, as is demonstrated by their constant statement that nobody owns a frequency, despite the fact that nobody in the discussion, that I have seen, has suggested otherwise.

I fail to see how their coordinated status makes a bit of difference.
Regardless of whether or not a machine is "open" or "closed" the trustee
has always had the right to restrict access to the machine. To suggest
otherwise implies that you have the right to enter my home whenever you
want and operate my HF station without my permission.

> They consequently applied to the coordinating body to re-coordinate their
> pair as closed. The application, in recognition of the above, was granted.

I can understand why a system would want to be recoordinated as "closed".
Proponents of "open" repeater systems seem to be under the impression
that its their right to utilize the machine whenever they feel like it,
regardless of what the station owner says. At least if the machine is
coordinated as "closed" it may help convey the fact that people who are
not wanted on the machine by the trustee should not be operating on it.

From the FCC's perspective, it doesn't make a damn bit of difference,
since all repeaters are closed anyway in the eyes of the FCC.

In article <940603122524292@michaelr.com> ray.wade@michaelr.com (RAY WADE) writes:
>
>The foundation of the misuse of C.W. prosigns (NOT abbreviations) has
>only occured in the past 10 years or so when former CB operator's
>got their Amateur tickets and brought their misused and butchered CB
>lingo into the hobby.

Really? I've been a general for 18 years and have always heard CW prosigns
on phone. I see nothing wrong with it.

>KI> For those who chastise using CW abbreviations on phone, let me ask:
>KI> How would you call CQ without using a CW abbreviation?

Very good point - notice that Ray answers with a little lie:

>CQ is NOT a CW abbreviation.

The amount of misinformation on this net is startling! CQ *is* a CW prosign
- it's use predates phone. Its phone equivalent (on the maritime freqs)
is `Hello All Stations' - Ray is going to be the first ham to ever use it.

> Amateur prosigns (Q signals) were invented by Amateurs.

Wrong again. The Q-signals originated from commercial/maritime CW operators,
as were almost all prosigns hams use. The only exception is the Q-signal
QST = Calling All Amateurs. Oh yes, there's the ARRL-invented QNA-QNZ
codes for CW nets.

>KI> about DX
>KI> and DXpeditions without using CW abbreviations? For that matter, how
>KI> do you talk about CW without using CW abbreviations? See my point?

>Sorry, I don't. Perhaps you could give me an example. I suspect you
>will have to use "plain english" to do so.

He just did, Ray. On phone do you say `DX' or do you say `Distant Station'?
Do you say `CW' or do you say `Continuous Wave'?

Either you allow abbreviations to be used or you don't - either all or nothing.
No fair saying ``this one's okay for phone but that one isn't'' - you've got
to be consistant.

(* The following is a closed circuit advisory and is NOT *
(* for transmission over amateur radio. As you heard last *
(* week Newsline Support Fund administrator Norm Chalfin, *
(* K6PGX says that the funds needed to keep Newsline in *
(* operation are so low that Newslines operation could be *
(* terminated at any time without notice. According to Norm, *
(* at times it costs up to $1000 a month to pay the *
(* tele-communications and equipment supply bills. Norm says *
(* that we have to raise at least seven thousand dollars just *
(* to carry us through to the end of 1994. *
(* For those of you unaware, Newsline pays the cost of *
(* three telephones including the one used for news gathering. *
(* We also pay for several electronic news and information *
(* services, we pay for electronic mail, for raw tape stock *
(* and the cost of repairing and updating our production *
(* facilities. *
(* Right now, Newsline has virtually nothing in its *
(* separate support fund. What little there is will not even *
(* cover the bills for May. Several of the staff including *
(* our producer Bill Pasternak, WA6ITF will be contributing to *
(* make up the current shortfall, but they cannot be asked to *
(* do it month after month. *
(* It's this simple. If there is not enough interest in *
(* the ham radio community to support this service then its *
(* operation will terminate when our communications services *
(* are cut off. *
(* If you want it to continue, then please send any support *
(* that you can, as soon as you can, to the Newsline Support *
(* Fund, Post Office Box 463, Pasadena, CA 91102. If you *
(* missed the address it will be repeated at the end of the *
(* bulletin. *
(* Again, and as always, we thank you for your ongoing *
(* interest and support. And that ends the closed circuit *
(* advisory with Newsline report number 877 for release on *
(* Friday, June 3 1994 to follow. *

The following is a QST

The United States Supreme Court rules that complaints about
indecent broadcasts can't be pursued past the FCC, AMSAT says no
to the NTIA and a ham is knighted. Find out why on Newsline
report number 877 coming your way right now!

(*****
SUPREME COURT SAYS NO TO LISTENER COMPLAINTS

The Supreme Court has let stand a ruling that bars members of
the public who are upset over what they feel are legally indecent
broadcasts from asking federal courts to revive complaints that

the FCC has dismissed. This by refusing, without comment, to review a ruling that says listeners generally don't have the proper legal standing to pursue such complaints beyond the Federal Communications Commission. The decision not to act could make it very difficult to take potty-mouth hams off the air.
The case involves a complaint filed before the FCC by Peter Branton of Chattanooga, Tennessee. Branton filed his complaint after listening to a National Public Radio news program on radio station WSMC-FM the evening of Feb. 28, 1989. He claimed that the program contained a report on reputed New York mobster John Gotti, and that it included a tape-recorded telephone conversation between Gotti and an associate that was used as trial evidence. Branton says that he was offended by the language. He filed a complaint with the FCC's Mass Media Bureau, requesting commission sanctions against NPR. But the commission refused his demand. It ruled that the report was part of a bona fide news story being reported nationwide. So the Chattanooga resident then sought help from the U.S. Circuit Court of Appeals for the District of Columbia but that three-judge panel of that court dismissed Branton's appeal last June. In fact, that court went so far as to say that Branton actually lacked the legal standing to file it. Branton then went to the United States Supreme Court.
Ironically, his appeal was supported in a friend-of-the-court brief submitted by two advocacy groups, People for the American Way and the Washington Area Citizens Coalition Interested in Viewers' Constitutional Rights. The brief was an unusual one, because the advocacy groups said they oppose Branton "on the merits of his indecency complaint."
But lawyers for NPR and other broadcast organizations that intervened in the case urged the justices to reject Branton's appeal. This is exactly what they did in turning away the Branton appeal.
What does this mean for ham radio? The FCC does not always act on complaints about the operations of potty mouth hams. In the past, if the problem was truly bad enough the Amateur Radio community would seek alternatives including taking the matter to other government agencies or approaching congressional leaders for intervention to the FCC. That road may no longer be open since the Supreme Court feels that the average person is not legally astute in determining what is and is not legally indecent.

(*****
AMSAT COMMENTS TO NTIA

In comments filed with the National Telecommunications and Information Administration in response to the agency's Preliminary Spectrum Reallocation Report, AMSAT-North America has asked for wider amateur and amateur-satellite service bands at 13 cm. The NTIA's Preliminary Report, published in February, proposed to cut U.S. amateur 13 cm allocations in half, from the present 2300-2310 and 2390-2450 MHz to 2400-2402 and 2417-2450 MHz.

AMSAT has instead proposed a primary allocation of 2400-2410 MHz to be shared by the amateur and amateur-satellite services, in addition to the 2417-2450 MHz proposed by NTIA. In support of this request, AMSAT cited the likelihood of greatly increased demand for amateur satellite operations in the 13 cm band in coming years, far more than can be accommodated within 2400-2402 MHz. It also noted the unsuitability of 2417-2450 MHz for amateur satellite downlinks because of interference from such devices as microwave ovens and the need to coordinate amateur-satellite allocations internationally so that they are available on a global basis.
AMSAT has also proposed that a narrow band of 1-2 MHz, somewhere between 2300 and 2400 MHz. This to be allocated to the amateur service to accommodate the experimental weak-signal tropo and EME work now carried out around 2304 MHz. Under NTIA's proposal, this would be displaced.
The NTIA's Preliminary Spectrum Reallocation Report was prepared pursuant to Title VI of the Omnibus Budget Reconciliation Act of 1993. The same act also requires that comments from interested parties such as AMSAT be reviewed by FCC and NTIA before any final decision is taken.

(*****
FCC DENIES MORE RULES CHANGE REQUESTS

The FCC has denied two petitions for reconsideration that sought a broader definition of permissible communications by amateurs. The petitions by David Popkin, W2CC, and Rolland D. Cummings, WA0EDA, sought expansion of FCC rules changes that went into effect in September 1993, in Personal Radio Docket 92-136. The two petitions sought permission for amateurs to retransmit certain US government broadcasts, such as time signals. Popkin's petition also sought a wording change to the new rules, from ''classroom instruction'' to ''instructional activity.''
These new rules which were the result of an ambitious rewrite of Section 97.113. These changes gave amateurs greater flexibility in providing noncommercial communications for public events and permitted paid teachers to use Amateur Radio in their classrooms. They also allow such personal communications such as making appointments and ordering pizza over an autopatch.
In denying the requests the FCC said that the ideas expressed in the petitions already had been aired and considered during the public comment period for PR Docket 92-136.

(*****
THE REASON WHY

The FCC is with more and more regularity turning down what it seems to view as pointless and mundane technicalities in rules changes. It says that a goodly number are filed for no purpose other than trying to solve a dispute that has arisen between one

or two hams. This the Commission says is something that the FCC is not about to do. At the recent Dayton Hamvention the FCC's John B. Johnston, W3BE explained why minor rules changes are becoming harder:

"One approach that we try very hard to use is to avoid what we call 'How to' rules. These are rules that specify just how you are to do something. And you ask for a lot of 'How to' rules. But they seem to always make for problems sooner or later. When you have a 'How to' rule your probably trying to solve a problem with an existing system. Sooner or later that system is going to become passe. But rules seem to have a habit of taking on a life of their own and get in the way of new systems." John B. Johnston, W3BE.

As far as mundane and non essential changes are concerned, the FCC is not going to get involved. They say its a waste your time and theirs. And that more than explains why the Popkin and Cummings rule change requests were unceremoniously turned away.

(*****
NEWSLINE FINANCIAL CRISIS UPDATE

The latest on the financial crisis facing Newsline we reported last week. The good news is that you are hearing us this week. All we can say is that we hope we are able to be on next week as well. Call back in 7 days and we will all know more by then.

(*****
AMATEUR RADIO TO ASSIST OAKLAND CA DURING EMERGENCIES

The City of Oakland California and the Oakland Fire Department have entered into a partnership with the Oakland Amateur Radio Emergency Services Organization. The Oakland City Council has voted a resolution which directs the City Manager to enter into a letter of understanding with the Oakland Amateur Radio Emergency Service and designate them as a Radio Amateur Emergency Civil Emergency Service during any locally declared disaster.
Members of Oakland ARES will respond to the City's Emergency operation Center following any disaster or emergency which may threaten life and property in Oakland. They will then disburse to assist with the communication needs of emergency operations throughout the city.
The Oakland City Council says that Amateur Radio Operators have always been recognized by Oakland as being an effective means of providing critical back up communication links during emergencies. They note that Amateur Radio Operators have been on the scene of virtually every recent major disaster whether in the United States or abroad, in some cases they provided the only communication with the outside world.

(*****
Long Island NY Tower Case Update

Mark Nadell, NK2T says that he has received a favorable decision by the New York State Supreme Court in his antenna battle with the Town of Hempstead Long Island, but the victory will probably be short lived. This is because Hempstead has filed a motion to re-argue the case. The motion was filed on the May 10th and that forced NK2T to file a cross motion to re-argue his side. Nadell believes that Hempstead will probably get a clarification of the original finding. This was a court decision that annulled the towns order for him to take down his tower and antenna.
If a clarification is granted then Hempstead will almost assuredly file a formal appeal. As such, the case could go on for years, possibly ending up in the United States Supreme Court if both sides decide to wage the legal battle to its ultimate end.

(*****
20,000 REPEATERS

On a brighter note, can you believe that there are now over twenty thousand FM coordinated repeaters, packet bulletin boards and propagation beacons on the air in the United States? Well those are the numbers contained in the new edition of the ARRL Repeater Directory that made its debut at the Dayton HamVention four weeks ago.
1994-95 edition of the ARRL directory has been reorganized for easier use on the run. The Leagues says that this makes it easier to find the listings of the coordinated and registered FM relay devices nationwide. The new directory does not contain an estimated 5000 to 10,000 more uncoordinated repeaters and unlisted packet BBS that are also believed to exist.

(*****
FOUR HAMS JOIN CQ HALL OF FAME

CQ magazine has inducted four amateurs into its halls of fame. Joining the CQ Contest Hall of Fame is John Thompson, W1BIH also known a PJ9JT; Atilano de Oms, PY5EG; and the late Herb Becker, W6QD.
Thompson, 79 and licensed since 1930, is well-known as both a DXer and contester. For more than 20 years he has operated from his winter home on Curacao in the Netherlands Antilles.
De Oms is credited with encouraging contest operations all over South America, is an active contester, and has one of the most potent stations on the continent. He also is at the top of both the Mixed and Phone DXCC Honor Rolls.
Herb Becker, W6QD, was one of the handful of DX and contest operators who conceived, in the late 1940s, the idea of the CQ Worldwide DX Contests. The basic rules he helped write more than 40 years ago have remained essentially unchanged.
Charlie Mellen, W1FH, is this years loan entry into he CQ DX

Hall of Fame. A DXCC member before World War 2, he started over in 1945, climbed to the top of the DXCC ladder, and stayed there through most of his career.
The ceremony inducting the four took place at the recent Hamvention in Dayton, Ohio.

(*****
DX - SAINT PAUL ISLAND

In DX, word that Saint Paul Island with operators KW2P, WA4DAN, AA4VK, N0TG and possibly W0RJU plan to be active for the first week of July. This is the same group operated from KP1 and KP5 in 1992 and 1993. Landing permission and transportation for Saint Paul has already been received.

(*****
SCOTTISH DISTRESS

Did you hear a strange signal on 14.001 MHz which sounded like a distress signal? GM3YEH did. He says that It appeared in Scotland on the 2nd of April around 14:00 UTC.
The Scottish Coast Guard Rescue service in Greenock were alerted. In short order they reported back that it is not a distress signal but faulty equipment being tested in Florida. They would not elaborate further or indicate who the transmitter belonged to. But they did indicated that it could take a while for engineers to get the signal off the air.

(*****
PLUMBING

Our heartiest congratulations to Andy Watts, G4VIW, on being named as a "Member of the British Empire" in the 1994 New Years Honors List.
We have been told that being named as a Member of the British Empire is akin to knighthood. Andy, who is Chief Executive and Secretary of the Institute of Plumbing in Hornchurch Essex was in effect knighted for his -- and we quote-- his "Services to Plumbing."
And no this is not a joke. The honor is for real. The British do things in a slightly more formal way then we do here in their former colonies.

(*****
And for this week, that's all from the Amateur Radio Newsline.
You can write to us at Post Office Box 463 in Pasadena, CA 91102.
Next week tune in for coverage of the Westlink Report Young Ham of the Year Award presentation in Seaside Oregon.

- - - - - - -
Side Note from Steve: It is not unusual for a plumber to be made a Member Of The British Empire. The first plumber was appointed by Queen Victoria

to put in the sewers and water supply system in London. His company also
manufactured and installed most of the bathrooms a hundred years ago.
During World War I, American dough-boys stationed or passing through London
were forbidden to openly gamble. However, that didn't stop them from
shooting dice in a place where they would not be interrupted, the "loo".
The royal plumber's name was Thomas Crapper. And so now you know how a
game of dice, and something else we are all familiar with, became known as
"craps". -Steve

Hi Jay, welcome to democratic socialism. It's not who occupies something
that matters... what matters is who controls it. In a democratic socialist
state, you are forced to obey the federal government's latest idea of
what is the greatest good for the greatest number. They can change the
rules for anything at any time for any reason.

The great majority of hams believe that the federal government should and
does own all radio frequencies. If one accepts that idea, then if the FCC
says "all amateur repeaters shall be open", the Great OZ has spoken.

Sorry Roger, that's the way I see it. Legal and moral issues aside, the
advocates of no-closed/all-open repeater coordination feel they shouldn't
shouldn't have to pay to access spectrum that "belongs" to everyone.

And, while I may agree that its a good policy to promote as many open
systems as possible, I also recognize that systems are expensive to
set up and maintain - especially good systems with many links,
remotes, and excellent coverage. Hence, if those trustees wish to
restrict access to the machine to "members only", that's their
right.

Its not a question of frequency ownership. Everyone knows that nobody
"owns" a frequency. Certainly someone can choose to operate on a
repeater input or output, and can probably do so ad infinitum, as long
as they're not interfering with its operation.

Amateurs are very greedy when it comes to their spectrum. And, with
the welfare-state mentality permeating american society, its only
a matter of time before we see that mentality invade amateur radio -
and rightfully so, since the attitude of hams involved in ham radio
simply mirror those of society as a whole.

I believe that the attitude expressed by some here - dual-band radios
are cheap and we want access to that spectrum now, so decoordinate all
of the "closed" machines so we can coordinate new yak-boxes which will
give us free access to the airwaves - is but one symptom of that
problem invading the hobby.

If you disagree, then fine, that's your right.

Subject: KENWOOD TH-28A & TH-78A
To: info-hams@ucsd.edu

Thanks to a recent reply regarding my TH-28A VHF hand held(& its freqs)
I have mangaged to unearth several undocumented features of these
Kenwood HF/UHF sets ! Why the manuals don't mention them beats me !!!!!

TH-28A Can be easily convinced to cover AM aircraft band (118-136MHz)
------
1. Turn on & make sure you're in VFO mode on VHF
2. Touch F button for 1 sec or so until it flashes
3. Then touch LOW button. LCD shows 118-136 range (receive only)!!

* All usual Mem/ Scanning functions available.
* Repeat steps 2 & 3 to return to normal VHF 136-173 MHz .

TH-78A Can be persuaded to receive cell phones AND < PLAY POKER > !

CELL 1. Turn on & ensure in VFO mode & on UHF
PHs 2. Touch F button for 1 second until it flashes on LCD
--- 3. Touch BAND button. Display & coverage is then 800-1000Mhz UHF,
& 300 up on VHF. All mem/scanning features available.
4. Repeat procedure to return to normal

POKER !!
-----
1. With set off touch PTT + M + PWR UP keys simultaneously.
(Similar to "3 fingered salute" CTRL+ALT+DEL with PCs)
2. Display changes to show the card game POKER !!
* Simply PWR OFF to return to normal radio use.
* Actual keys to play the game I have listed here O.K., but will
only make available if wanted ... request if you can't work out

Any other "mods" out there ? 73s de ZL2AJZ & ZL2USP in New Zealand

Subject: Radio networking - with P
To: info-hams@ucsd.edu

The first 2 questions are ... WHAT RANGE, and WHAT DATA RATE do you have
in mind ! Lots of VHF stuff around (often advertised in PC Mag &
Byte, but usually just 9600 bps) with say a few miles range. At the
local area wireless network (LAWN) speeds you fancy (1Mb) range is
only 50- 100 metres & easily obstructed by even an office doorway ! (
LAWNs usually use spread spectrum in the 1-3 GHz range). If it's just a
project you're afdter why not try something in the Infra Red (IR) ?!!
Range will be only 20m or so (but you can bounce signals off the

ceiling!), but data rates quite high & with error correcting software
things can go O.K.. Hewlitt Packard are at the forefront here. If you're
a Ham why not consider Packet Radio (but only Modem type speeds)
THIS IS A VERY RAPIDLY EMERGING FIELD .,... READ RECENT PC MAGS FOR
PROGRESS .... users hate cables of course ! Regards from ZL land

Greg Bullough (greg@netcom.com) wrote:

: Perhaps. However a significant number of amateurs believe that the 'closed'
: repeater is contrary to the principle that no individual or group 'owns'
: a frequency.

Are you suggesting that an "open" repater does own it's frequency? You
are not talking about closed verses open with this statement. You are
referring to coordinated verses non-coordinated. A coordinated repeater
doesn't "own" a frequency regardless if open OR closed. It, like any
other amateur radio operation, has a right to exist without interferrence,
hence the protection from a non-coordinated system.

: However, in areas where spectrum is becoming critical, we believe that the
: band plan should dictate that OPEN repeaters have priority, sometimes to the
: extent that even existing closed sites are offered the option of either
: opening up or giving up the allocation. And we also believe that the
: 'band plan,' as developed by local and national organized Amateur Radio
: groups has sufficient authority to dictate fair spectrum usage.

Who is going to be in charge of this kingly operation that decides who is
really good and who is really bad? Does a closed autopatch give you one
black mark? How about used of the remote base . . . does a little
control here increase the "black" a little more? You are really talking
about a grey area that will be very tough to define. Again, all systems
must have some "closed" operations associated with it (like basic
control, for instance).

I'm not really straining as much as you think here . . . you have now
entered the twilight zone ham radio politics.

This would indicate that Yaesu is supplying a correctly designed
echo-canceling mike. And, the fact that I talk to like a commercial
radio mike probably explains why I haven't had any complaints about my
audio.

Of course, the problem with this habit is when I'm talking straight
into the radio....my voice tends to be distorted (or so I'm
told....over modulation?), and I have to remember to hold the handheld
away from my mouth....about 6".

>that is, no turning on the system to make a new friend in a distant town.

The 3 minute commute and ten minute other time limits were imposed on the
system because some individuals were not able to opperate without such
guidelines. The system worked well for at least 5 years before this
restriction had to be placed on the machines.

The system *can* and is used to meet people in distant towns, it must be
done with great prudence. Consider what it would be like to liven a major
city, whose two meter repeaters are already busy, then link these across an
entire state with a contiuous coverage of roughly half the state of

Washington. It is just a matter of exercising good judgement.

>Also, most network nodes are kept in the "off" mode. A code control cheat
>sheet is neccessary to enable the network for a QSO, and then disable the
>network afterward.

The Intertie is much like internet in that each individual machine is
autonomous. It decides whether it wishes to participate in a net, or be on
at all. The ablility to turn the machines on and off at will (by the users)
makes the Intertie flexible.

>It has value, but it could have so much more.

As a former control operator (I am now college and don't have the time to
invest) I think that you need to look at the reason for many of these rules
that you consider thorns. Perhaps you should become more involved in runs
up the hill in the middle of the winter, or better yet in elmering the new,
and the old who can't seem to get it together, so that thorns don't grow.

: be the preferred occupants of the spectrum.

I'd say it's pretty presumptous on your part to say closed repeaters
don't serve the amateur community . . . as well as open systems. This
may be your opinion but it's not necessarily fact.

: to serve the needs of the largest number of users. Since open systems
: don't place limits on who can use them, they make their chunk of spectrum
: more accessible to more amateurs than closed systems do.

Actually, a trustee can't really do this any more. Defacto, all trustees
MUST place a limit on who uses their repeater per the FCC. The trustee
may choose to ignore this requirement or just give blanket approval to all,
but it is now their responsibility to know and approve the users of the
repeater in some sort of timely fashion. If they don't, and illegal
operation occurs on the repeater, the trustee is then responsible. You
have to keep up with the new rules and interpretations.

Jay is right, this really should be going on in "policy".

>we have now is a committee of foxes setup to set fencing standards for the
>chicken coop.

As an ex-repeater coordinator with about 10 years experience coordinating, Gary has made some valuable observations here although there are some points I'd like to make. First, not all coordinating bodies represent only repeater operators - B.C. and Washington, for example, allow any interested amateur to join the organization, and I suspect others do too.

The coordination group, however, like almost all coordination groups, is mainly made up of people interested in repeater operation issues - like coordination - and as a consequence they naturally look out for their own interests - and since most of them are reps of repeater groups, it is almost impossible to pass proposals through repeater coordination that would spread access to existing channels.

I certainly have vivid memories of the time we tried to start PL sharing of repeater frequencies (even with a five year phase in) so that new groups would also be able to use the spectrum that was least heavily used. My point basically is that many (or at least some, :-)) frequency coordinators would like to ensure more sharing of channel spectrum when repeaters are lightly loaded, but are just unable to get such proposals past the current crop of ham politicians in the coordinating bodies.

Second, we have a major problem when dealing with the ARRL VHF/UHF Committees, (and had with the CRRL, now RAC committees as well) who certainly were neither favourably disposed to repeater operation in general nor particularly knowledgable in the field of repeater ops. As a consequence, we've had an absence of effective leadership in the whole area of VHF/UHF bandplanning in general. And because coordination councils haven't had confidence in the ARRL, or felt they had a mandate to do bandplanning outside the repeater sections of the bands (I'm not implying they don't have opinions about it, :-)), nobody has been doing a really effective job of dealing with these issues.

I'm not going to comment on the closed/open repeater discussion, because up here virtually every repeater is open, tho some are friendlier than others.

I don't see that repeater coordinations SHOULD be set in stone, although many repeater operators do. I do think that ANY process that coordinates repeaters needs to have a mechanism to vary the parameters of a coordination at some future date - providing this is done in a fair, even handed, public and predictable manner. Repeater ops need to be able to plan how to run their system well into the future, and not be subject to unexpected alterations and intrusions.

At the same time, bandplanning needs to be realistic in terms of what's needed now, as well as what's needed in the future. Bandplans should not simply provide spectrum for everyone that wants it, whether or not it's used. CW and weaksignal work, for example, on the VHF/UHF bands have far more spectrum allocated than is warranted by the number of amateurs using those modes, especially when FM and packet modes are bursting at the seams.

Spectrum needs to be allocated both by frequency AND time. Repeater control links, for example, could be congregated on a small number of frequencies since they're often highly directional and can be PL'ed separately. And very lightly loaded repeaters ought to be the first candidates for some form of time sharing.

Hams might take a page from some of the commercial bands, where almost every frequency is more heavily loaded than ours are.

3522. Looking for Field Day partner

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-06 04:13:21 UTC
From: klarquis@teleport.com
Message-ID: <2su7p1$i4o@elaine.teleport.com>
Source record: 265529

I'm looking for a partner to operate Class B (1-2 ops, portable)
somewhere in the western half of Oregon. (Field Day is June 25/26.)

I was an active contester as a teenager and in college -- then got
sidetracked (married, kids, etc.). I'm finally finished paying off
student loans and am ready to get active again. First step is to upgrade
my 1950s-vintage S-Line with a Kenwood TS-850S. Field Day seems a good
opportunity to burn it in. Coincidentally, we (wife and 5/7-year olds)
had already reserved that weekend (and week before it) for camping, so if
I'm out in the woods on Field Day weekend, why not operate...

We've got no firm agenda for our camping trip. 'Thought we'd spend part
of it at Crater Lake. But could be anywhere in this half of the state
for Field Day. (Suggestions welcome.)

If interested, pse drop me a line. (Time is short...) Other kids/family
welcomed.

73,
Bill Conwell, K2PO
226-7391 (w); 293-1354 (h)

** MROP, GROL and GMDSS exams in Cambridge MA ** Sat. June 18th 1994 **

** LAST CHANCE BEFORE THE NEW REGULATORY FEE IS ADDED IN JULY

The MIT Radio Exam Team will conduct exams for the General Radiotelephone Operators License, the Marine Radio Operators Permit and the Global Marine Distress and Safety Systems Licenses. The exams will be held at 10AM on Saturday June 18th in Cambridge MA at 77 Mass Ave in MIT Room 1-150.

A regular schedule of exams is planned for Cambridge MA on the second Saturday of odd numbered months. For more information call Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a copy of any commercial license or proof of passing certificates you want to claim credit for. Also bring 2 forms of picture ID, a black pen and a pencil.

** If you are thinking of getting a commercial licence now may be the time. The FCC is talking about imposing an additional "regulatory fee" after July 1. This will probably be $105 - ouch- for GROL applicants. Since the GROL is a lifetime license getting it now avoids the fee.

This exam session is timed to allow all the paper work to reach the FCC before July to avoid the proposed "Regulatory fee"

Copies of the question pools are available from the Government Printing office or from W5YI at 1 800 669 9594. This is probably the best study guide available for the moment. A few copies are available for pickup in Cambridge.

The General Radio Telephone Operators License is required to service transmitters in the aviation, maritime and international radio services. A Maritime Radio Operators Permit is required to operate radiotelephone stations aboard large ships and certain aviation and coast stations. Large ocean going ships will be required to carry Global Maritime Distress and Safety Systems licensees. A GMDSS Maintainer License is required to service GMDSS equipment.

The Global Maritime Distress and Safety Systems Operator (GMDSS-O) licenses exam question pool is scheduled for release shortly. Exams for this license will be offered if the necessary

material reaches us in time.

At a later date exams will be available for the Commercial Radio Telegraph operators licenses. Amateur Extra Class operators may be particularly interested in obtaining a commercial telegraph license as they will receive credit for the 20 WPM 2nd class code exam.

The MIT Radio Exam Team operates under the auspices of the National Radio Examiners COLEM, part of the W5YI group.

SYNOPSIS OF ACTIVITY

Solar activity was very low. The disk remains spotless
and quiet.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at unsettled to active
levels for the past 24 hours. High latitude stations
experienced some local nighttime minor storm conditions.
Enegetic electron flux levels (GT 2 MeV) ranged from normal
to high.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet to active for day one of the
forecast period. Some high latitude local nighttime minor
storm conditions can be expected. By day two and three,
overall levels are expected to decrease to mostly quiet to
unsettled with some active periods expected during local
nighttime.

Event probabilities 06 jun-08 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 06 jun-08 jun

A. Middle Latitudes
Active 25/25/20
Minor Storm 20/15/10
Major-Severe Storm 10/05/05

B. High Latitudes
Active 30/30/25
Minor Storm 15/15/10
Major-Severe Storm 20/15/05

HF propagation conditions returned to near-normal over
most regions, except periods of minor signal degradation on
transauroral circuits. Night sectors are still experiencing
periods of minor signal instability mostly in the form of
fading. Similar conditions are expected over the next 48 to 72
hours. Conditions should continue to gradually improve through
08 June inclusive.

---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,

Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Hi Jim,

Don't coordinators do this anyway? If "Applicant A" applied for a pair 2 months before "Applicant B", yet the second applicant's station location provides better spectrum use and no interference, who should the coordinator give the available frequencies to?

I also think that if "Scrubba" made it a policy that 75% of all repeater coordinations were to be for "open" repeaters, as long as that policy was equally enforced, they'd be safe.

Yes, they might get sued. You might get sued. You might sue me. The real threat of getting sued should not drive decisions. The threat of losing should.

>Cirkit (tel. +44-992-441306).

10.7Mhz is not exactly well suited for high quality SSB crystal filter design. Crystals DO change frequency with both temperature and time. Not all crystals, even of similar cuts, change the same way by the same amount. Hence the crystal filter characteristics will change with temperature, such as for Field Day operation, and with time, due to crystal aging. Most of my designs selected much lower IFs when I had the luxury of "doing it right." 5MHz was the highest I figured was marginally acceptable.

>If you think about a single conversion design, 9 or 10.7 MHz IF is quite
>low, usable at 144-146 MHz, but if you are going to use it on 70 cm,
>you should put separate helical front end filters for the 432 MHz DX-
>band and the 435-438 MHz satellite band.

Wellllll, single conversion is not nice no matter how you do it unless you are REALLY anxious to maintain low power operation. For VHF I'd go to a dual conversion with first conversion up to the 70Mhz to 140MHz range. For UHF I'd consider a first IF of 70MHz quite workable. For 144MHz - who uses it? (LA bias. {^_-}) For 144MHz I'd use a 21.4MHz 16KHz wide filter in the first IF and double convert to between 455KHz (mechanical filters) to 5MHz. (I find the filters required in things like Syntors to be a royal PITA because of their necessary narrow bandwidths. They are required to reduce the half-IF response as much as anything. (Fr +/- 1/2 Fif response) I'd rather select something a little less stringent based on requirements for reducing chances of front end overload and if possible custom tailor it to that function.

(I designed VERY high dynamic range radios for DoD usages for about 20 years before I discovered software burned my fingers a LOT less than soldering irons and was easier as well. At least one design was able to operate with no alteration in BER when receiving -109dBm signals in the presence of inband -5dBm signals (which was as high as I could conventiently generate with the test lashup.) So I have a half an idea what I am doing and am TERRRRRIBLY opinionated. I also do not reveal ham licence call for reasons of privacy having faced a nasty threat based on it.)

Um, 200ppm pretty much wants more than a simple varicap to make it happy. Even with carefully selected (and spurious de-Q-ed inductors) past 200ppm it is remarkably easy to get into odd spurious oscillations due to crystal spurs. As you mention, I'd never try pulling an overtone crystal farther than its base frequency tolerance at best. (I learned that one the hard way. Just barely made that one work.)

> be ready to defend your position financially.

Michael, not to pick on you. I've seen this mis-repeated about a
half-dozen times in this thread so I picked yours to reply to.

THE F.C.C. DID NOT OUTLAW AND/OR CLOSE "OPEN" REPEATERS. All they did
was reaffirm the right of the licensee to determine who uses the
repeaters under his control and callsign. They cited chapter and verse
what Part 97 already said. Nothing new here.

"An open repeater is a repeater that does not limit those who use the
repeater to members, affiliates, or other defined group or list of
operators." (source, "KJ6YT's Authoritative and Official Sounding Book of
Ham Radio Definitions, Volume 1.)

An open repeater's trustee can still keep KW6UNK from using the repeater
to read his 60's poetry -- or even at all, if he wishes. The FCC doesn't
care if the licensee considers his repeater "open" or "closed." The FCC
says that the licensee can pick and choose who can and cannot use the
repeater.

> I don't arbitrarilly assign "utilization" as the criteria by which
> repeaters should be coordinated. There are numerous repeaters in this

> Sounds like you want a free ride at everyelses expense.

No, but perhaps it should be a criteria. For example, your application
for a 3-neighbor system at the county's highest location vs. a 200-member
club who wants to put up an open repeater at the same site. Who should
be approved for the high-visibility site? The 200-member club's open
system. Who should be guided toward better use? The 3-user system.

You're new on here so let me fill you in:

1. One fellow was bragging about how he was going to place a 5 kW broadcast band transmitter on the ham bands and about how he didn't care about the FCC rules, etc. - I scolded him - Dana came to his defense.

2. Bly bragged about how easy it is to operate in SoCal without a license and that he'd done it for years - I scolded him - Dana came to his defense.

3. Someone was inviting pirates to use 6 Mc air-to-ground frequencies - I argued with him about the danger of that - Dana came to his defense.

4. Bly now brags about jamming closed 440 Mc repeaters - I scold him - Dana shows up.

You might want to `read the mail' for a couple of months before you become too critical.

****

VERSA-POUCHES

****

!!!!!!2 VERSIONS!!!!!!

YAESU FT-11R and small HT owners,

For those of you that have requested HOLD DOWN STRAPS on the VERSA-POUCH,

We now have another version of the VERSA-POUCH with hold down straps.
Which

holds down your HT and prevents it from falling out of the case.

Because of this new version, the CASE PRICE will slightly increase to
6.00 per

case, 5.50 for 2 or more. If interested please send a reply message ASAP.

The makers of this pouch will only produce, these POUCHES with hold down
straps,

by request. So let me know how many you want and we'll take it from
there...

Depending on the size of the order, it'll take 1 day, for single pouches
to

1 Week plus, for larger orders. Also, because of this NEW VERSION, the
VERSA-

POUCH can be customized to fit MOST small HT's, but you'd need to pay &
order
in advance.

PRICE BREAK DOWN:

MODEL #: VP-1-NS

Regular Pouch, no hold down straps = $4.00 or $3.50ea. for 2 or
more.

MODEL #: VP-1-WS

NEW VERSION Pouch, with hold down straps = $6.00 or 5.50ea. for 2
or

more.

Even for $6.00, you still can't go wrong!!!!

PLEASE DO NOT FORGET TO INCLUDE SHIPPING...

Thanks again to many of you for your interests and suggestions... SPREAD
THE

WORD...

73 David.

I can say that if the FCC thinks that they are doing great by processing 300 apps a day, that is a crock of sh*t.

I finally received my license after about 10-12 weeks of waiting, and will have to say that, as a reputable Mac/PC/UNIX computer consultant here in the Portland area, I am EXTREMELY disappointed with the fact that the FCC knows NOTHING about how to run an Information Systems department.

First of all, hasn't the FCC ever heard of a data entry folks? Those people type data in, with 99.99999% accuracy at incredible speeds.

Second, if this is such a problem with the FCC, why don't they outsource it and pay some company some reasonable rates?

Once again, the FCC is showing just how inefficient government agencies can be, and I think folks who take the time to get into ham radio are being served a tremendous disservice.

Michael is right on this... ...there are lots of reasons to leave
the 'pioneers' to be proud of their 440 pioneering for the next
quarter-century and head for 1.2Ghz. For that is the land where
cellular systems begin to make sense, where antennas are tiny, and
where, thanks to Motorola et. al. generating a bit of RF is no
longer a major feat.

Heck the SoCal market alone could drive the price of 1.2Ghz rigs
through the floor.

And the Jay Maynards of this world can search out a good 75meter/440Mhz
all-mode transceiver, to fit their world-view.

Greg

Try the Boston Amateur Radio Club site at:
oak.oakland.edu

Ted Trost, N1RDQ
tedtrost@netcom.com

Just a little direction finding... specifically, the directory /pub/hamradio.

73,
Scott

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 4/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 4 JUNE AND FORECAST UP TO 7 JUNE

IPS Warning 15 was issued on 26 May and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 068/002

1B. SOLAR FORECAST
05 June 06 June 07 June
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 070/005

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 3 June
Learmonth 22 4344 3434
Fredericksburg 20 20
Planetary 20 19

Observed Kp for 3 June: 4433 3334

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
05 Jun 20 Unsettled to active.
06 Jun 20 Unsettled to active.
07 Jun 20 Unsettled to active.

2C. MAGNETIC COMMENT
Disturbance expected until 7 June due to a coronal hole. Activity is
not expected to exceed active levels locally for the remainder of the
disturbance period.
3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Jun normal normal-fair fair-poor
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Jun normal normal-fair fair-poor
06 Jun normal normal-fair fair-poor
07 Jun normal normal-fair fair-poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 04 June: 34

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
05 Jun 30 Near predicted monthly values.
06 Jun 30 Near predicted monthly values.
07 Jun 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Local propagation conditions appeared fair yesterday, with occasional
sporadic E layer and night-time Spread F. Normal conditions are
expected for the next three days.

Subject: Midland 13-513 schematics?
To: info-hams@ucsd.edu

Randy, a schematic diagram won't do you any good. That unit has many
modules all interconnected, and it's far from being a simple unit to
service. I used to own one, and finally sold it.

I do have a copy of the service manual that I'd be willing to part
with, but I'd be more interested in buying the radio from you so I
could play with it and possibly get it working.

I used to have a repair shop and did Midland warranty work, so I may
be able to get it working. You can reach me at 818-894-2887 (I am
more or less local to you).

------NOTICE----------

To one and all! Finally we are back online! It only took me and my new Co-Sysop Bob Ward three weeks to figure out that one simple little glitch was
holding us up, but we even added a new Internet UUCP interface to the BBS in the process.

The Disney Software BBS is now back on FIDOnet full time, as well as the Internet!

Internet users can write to us directly here at Disney Software via our state of the art 8 line BBS at the Intenret ID - sysop@disneysoft.com.

Messages will come straight into our BBS and be answered directly by our staff!
We are also participating in the rec.arts.disney newsgroup too! It is available on the BBS as well!

Fidonet users can still reach us at node ID 1:102/841.0 as always, and we will
have a new Nodelist entry shortly which will allow systems to do File Requests
from us again! We have plenty of files to choose from!

Our Front Door system is online 24 hours a day and has a line dedicated to it,
so pesky busy signals should be minmized!

Members of the Disney conference on FIDO will be happy to know that I will finally be resuming my duties as Moderator of the echo. The three week delay
in doing so was caused by the BBS pooping out on us again, but now it is going strong and we can get back to work!

Until Chris Harrower returns to Moderator duties I will be handling it. I will be posting new rules in a few days after they get typed up. I have been
watching what's been going on and Steven Soria has been handling it nicely in my absence.

I would also like to state that the echo will be back to it's normal status
within two weeks. I am in contact with Chris Harrower and we are
straightening
out that little problem.

Well, enough of that! Back to reading!

X-FTN-To: All

Hi y'all! Here is my newest product; once again it is Star Trek
Deep Space Nine related, so those of you who are not fans have been
warned... 8-)

And now;
The Next DS9 Music Video!

In an alternate reality, Verak kept Dax, and Jadzia died. But who's to say Dax LIKES its new host?

(focus on: Verak Dax, nearly swallowed up by the darkness. He stands just outside Quark's, which is closed. The environmental controls on the Promenade have failed again, spectacularly so, causing it to rain inside the station. It's raining hard. Verak Dax holds an empty bottle loosely in one hand. As he sings, conflicting emotions cross his face; Dax is taking direct control, overriding the host...)

"Jadzia"
(to "Donna" by Ritchie Valens)

Jad...zia,
Jad...zia,
Jad...zia,
Jad...zia.

I had a Trill, Jadzia was her name,
Since Verak stole me I've never been the same,
'Cause I loved that Trill,
Jadzia oh where can you be?
And why aren't you me?

Verak Dax spends all his latinum on drink,
But when he's unconscious I'm still left to think,
That I loved my Trill,
Jadzia oh where can you be?
And why aren't you me?

Jad... zia, when Verak's gone,
I don't think I'll be Joining anew,
(oo oo)
`Cause of all, all-of-my-hosts, I loved, only you!

I had a Trill, Jadzia was her name,
Since Verak stole me I've never been the same,
'Cause I loved that Trill,
Jadzia oh where can you be?
And why aren't you me?

Jad...zia,
Jad...zia,
Jad...zia,
Jad...zia...

(fade down and out)

--Performance by the Volehunters; lyrics by Tammy Potash.

(note: "Jadzia" must be stretched out to match the length of "Oh, Donna.")

As always, I welcome comments...

Over and out...

... It's time for TRILL! The game show where YOU'RE the host!

Subject: Near new Cushcraft R-5 antenna for sale
To: info-hams@ucsd.edu

This antenna was only installed 2 weeks before my neighbor convinced me to take it down.

It's a Cushcraft R-5 vertical half-wave antenna, and covers 10, 12, 15, 17, and 20 meters. I've used it successfully on 40 meters with my antenna tuner, though most antenna tuners would admittedly allow you to tune up your bedframe.

Best offer of around $200 takes it. It's back in it's original packing and complete with all the original paperwork including blank warranty cards.

Subject: Punch card settings for Hickok tube tester.
To: info-hams@ucsd.edu

I have the use of a Hickok KS-15874-L2 vacuum tube tester. It uses plastic punch cards to adjust the settings for each tube type. The tester I have has no punch cards for the very old tubes I want to test, e.g. 24, 26, 27, 80, 71A. Does anyone out there already know the proper settings (electronic) or puch holes for these vacuum tubes? I will be getting a manual for the tester soon, but it is not in hand yet. The tester does have blank cards and a punch tool. Thanks for any help.

SB DX @ WW $RTDX0603
VK2SG RTTY DX Notes, 30 June
VK2SG RTTY DX Notes for week ending 3 June 1994 (BID RTDX0603)

One wonders where the art of communication has gone? Over the past
week I read an interesting bulletin edited by Helmut, DL2BR on Pactor
Link-Errors. When using the mode one may see several operational
errors. Most of those are caused by a lack of knowledge of the
protocol. Some errors arise by misunderstanding the possibilities of
Pactor. But a few operators ignore existing connects too. Fortunatly
the last mentioned are really a small minority.

Our thanks this week go to ZS5S, W2JGR, WB2CJL, OPDX, IK6CGO, I5ICY
and IK5PWJ PacketCluster and the NJ0M node of the Twin Cities.

Notes Of Interest:

SAINT PIERRE & MIQUELON, FP. FP/KA1NCN will be active on CW, SSB and RTTY from 160-10 meters from July 19-25. He will participate in the IOTA-contest. QSL via AA1AS.

LIBYA, 5A. There are rumors for a planned operation in Libya by a Japanese group led by Ajiro, JA2JPA. No official date is known. The operation has a United Nations agency sponsorship.

BHUTAN, A5. There are still hopes for a possible operation by Jim Smith, VK9NS from this place. Actually he is waiting for new permission from the Bhutanese authorities.

SVALBARD, JW. Tom, LA4LN and and Magne, LB3RC will be active as JW4LN and LB3RC/JW from August 1-20. They will use all bands from 160-10 mtrs including WARC on CW, SSB and digital modes. QSL direct only to the respective home calls.

Send your Bandpass and Notes for next week's bulletin to Bob, WB2CJL @ W5KSI.#NOLA.LA.USA.NA or to WB2CJL @ I5FLN.ITA.EU.

Is this true? No open system places limits upon its users?
I thought the court case in SoCal was about the owners of an open repeater

trying to prevent two people from using it.

We can say that when an owner shuts down an open machine due to say, jamming, he *is* placing a limit on who he wants and doesn't want to us it.

We can even say that a PL'd open repeater is placing a limit on its users.

I wonder what you folks would do if there were suddenly no repeaters? You are so hopelesssly dependent upon someone else's radio (i.e., repeater) that you would probably see your own radio as worthless (as someone has already stated because he can't work any of the 440 closed repeaters).

How sad.

One of the first things I did when I got my first 2M radio (in 1976 - it was a Clegg FM-27 - the very first synthesized 2M rig) was play on 146.76 - it was a simplex frequency back then. Simplex in the Valley was very entertaining.

It's a total waste of time and energy to connect the 30L-1 to the Swan. The output power of the Swan is practically the same; you will get only about 3 dB improvement at best, one half an S unit.

You would have to go to something like a 30S-1 or Henry 2K to get enough to come close to being worth the trouble. Why not sell one of the two units and come out ahead? The Swan is pretty much obsolescent, and you could get a modern rig; the 30L-1 is in demand and you could get good money for it.

I'm not putting down your equipment, but the combination of those two isn't a good one. 73 DE K6DDX

: > criteria, we should decoordinate those "open" repeaters.

: > Since high utilization of an open repeater generally implies excellent
: > coverage, it also implies high site, high power, and expensive equipment.

: No, but perhaps it should be a criteria. For example, your application
: for a 3-neighbor system at the county's highest location vs. a 200-member
: club who wants to put up an open repeater at the same site. Who should
: be approved for the high-visibility site? The 200-member club's open
: system. Who should be guided toward better use? The 3-user system.

Generally what happens is both groups must approach the existing
coordinated repeaters on the frequency. Everyone knows there will be some
spillover into the adjacent coverage areas. Who ever makes the best share
will get coordinated. It is basicly up to the coordinated trustees on the
frequency to make the best decision.

Would your group share the frequency with a group similar to yours or
concider sharing with a 200 member group that already has a 2meter
repeater. Most of the time the new 440 repeater is only simulcasting the
2meter repeater and has only three real users. The difference is that most
of the amateurs heard on the frequency are not using the repeater but are
imported from an other band.

Who should be guided toward better use?

Bob

>This is where the classic frequency coordinator hat and the spectrum
>management hat get tangled. Many coordinating bodies try to wear both
>hats and there is a basic conflict.

You are correct about this. Many coordination organizations do try to wear both hats. They find out that they are very good at coordination, but very bad at spectrum management. This is because _coordination_ is a _technical_ field, and _spectrum management_ is a _political_ field.

When coordinating to reduce interference, it's easy to apply the laws of physics to the situation. When determining who is "more worthy", people become involved...and people aren't predictable.

>Many people feel that the only correct policy as coordinator is
>"first come, first serve", so whoever first files a non-conflicting
>application to operate a repeater gets the coordination in perpetuity.

...not necessarily in perpetuity...but...

This is the ONLY fair way to do this...assuming you are a _coordinator_.

>However, as spectrum managers, the body has to take into account the
>interests of all of the amateur community, users as well as operators
>of the designated repeater spectrum, in order to maximize the utility
>of the limited public resource to *all* amateurs. This is a dynamic
>role in a growing service.

...and a role best suited for a group of coordination organizations working together with hams using all modes and frequencies to find the BEST political solution that everyone can live with. Knowing full well that everyone WON'T get everything they want.

>It's in this latter role of establishing
>public policy that most coordinating bodies fail to carry out their
>responsibilities.

...but unfortunately, the coordinators are the people most hams EXPECT to do the job. Nevermind that they don't know HOW to do it...It just wasn't needed as badly until recently.

What IS needed is for someone at a national level to realize that spectrum management is political in nature and must be dealt with accordingly. The ARRL's lame attempts at spectrum management has been to get five people in a room and decide how best to plan the band for the entire nation...then ram that down all the coordinators' throats by printing that band plan in the

repeater directory.

I would love for the ARRL to make a really good try at spectrum management, but to do so will require them to admit that life exists above 30 MHz and west of the Mississippi river. They also need to realize that the needs are different in different areas, and a "national" bandplan simply isn't realistic. There will be differences around the country...and that's OK. I'm not sure the League is up to the task.

>they strive for true excellence.

While this is certainly true of some "closed" repeaters, it isn't always the
case. In my case, I participate in a large inter-city linked system with over
100 stations linked. With a system this large, it would be unmanagable without
some control over who uses it and how. Closed doesn't necessarily mean "you
can't talk here"... it just means "ask first".

Our system would be effectively "closed" even if it weren't listed as such.
A closed system is a political mindset of a group of users which cannot be
changed by words on a coordination document.

Which raises an interesting question... How long does it take to get
any kind of license for those services regulated under the Private Radio
Bureau, or are common carriers? For example, how long does it take to get
a license for GMRS or business band?

I can *somewhat* understand the FCC not giving amateur licensing top
priority. After all, it's just a hobby. (Hey, no flames please.)
Nevertheless, if the federal government is going to require us to have a
license to operate, then it is incumbent upon the FCC to be timely when
processing paperwork, and issuing licenses.

When I was first licensed back in 1986, it took about four to five
weeks to get your novice ticket. That was not an unreasonable amount of
time.

I was talking to a guy in my neighborhood last night who said that once
the FCC gets it's new computer system running, the plan is to process the
whole lot of technician class applicants. Is this true? Does the FCC
have any game plan for clearing the bottleneck?

3545. Macintosh Hypercard Test Stacks

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-06 12:23:05 UTC
From: tstader@aol.com
Message-ID: <2sv4f9$24o@search01.news.aol.com>
Source record: 265554

From the "Macintosh Amateur Radio Software - May 1994" list:

<Ham Test Stacks>
HyperCard stacks containing the entire question pool for each
license class. Can be used for preparation or generating actual
tests. The current releases are: Novice v4.1(new questions eff.
7/1/93), Technician v4.0(new questions effective 7/1/93), General
v2.4, Advanced v2.4, Extra v2.4.
Available via anonymous FTP from various sites, including
uxc.cso.uiuc.edu (/pub/ham-radio). NOTE: The newest releases of
Novice and Technician stacks are available at uxc.cso.uiuc.edu
(5/6/93) Author is available via Internet: dls@genrad.com
NOTE: Diana no longer is supporting this software, she no longer has
a Macintosh computer. Diana thanks for your wonderful contribution to
the Amateur Radio community for these stacks!
System 7 savy with HyperCard 2.1

Diana is no longer maintaining these stacks.... is there anyone in
the Mac community who would like to take this on? I just got a note
today indicating that the General question pool changes on 1 July
1994. I sure would hate to see these valuable tools become
out-of-date.

I'll be glad to support whomever would like to work on this project
with the information on how to gain access to the info required.

|> coordinator give the available frequencies to?

Applicant A should receive a frequency pair which minimizes interference.
If no frequency pair can be found that can do that, s/he should be
denied a pair. "Better spectrum use" should not be a concern. If it
were, then most packet radio and ATV frequencies should be reassigned
for repeater operation, since there are more people using FM voice than
ATV or packet, and clearly spectrum would be utilized better if we
eliminated those protected frequecies.

|> I also think that if "Scrubba" made it a policy that 75% of all repeater
|> coordinations were to be for "open" repeaters, as long as that policy was
|> equally enforced, they'd be safe.

Define an "open" repeater. If you say "a repeater which has no access
restrictions" then you are contradicting the FCC, which has specifically
stated that trustees have the right to say who may and may not use their
repeater.

|> Yes, they might get sued. You might get sued. You might sue me. The
|> real threat of getting sued should not drive decisions. The threat of
|> losing should.

The threat of losing is irrelevent. The only issue is whether or not you
can back up your decision with cash.

|> repeater.

Okay Robb, let's accept your statements here on face value. If I apply
for an "open" repeater coordination, I can turn around and ask every single
amateur who attempts to use the repeater not to use it until I've
personally met you, so I can get to know each of my users personally.
What are you going to do then? I'm still an "open" repeater. I've
simply decided to exercise my FCC-reaffirmed right to determine who
uses the repeaters under my control.

It appears to me that the the whole issue of decoordinating closed
repeaters seems to be an attempt to take that FCC-reaffirmed right
away from repeater trustees.

|> No, but perhaps it should be a criteria. For example, your application
|> for a 3-neighbor system at the county's highest location vs. a 200-member

|> be approved for the high-visibility site? The 200-member club's open
|> system. Who should be guided toward better use? The 3-user system.

Well, I would think you should coordinate both on different frequencies
designed to minimize interference. That 3-user system may involve the
three most important disaster communications coordinators in the county.
The 200-user club system may be just another yak-box. Who knows. Are you
going to open a kangaroo court and start trial proceedings with the
assignment of a frequency going to the "winner"? That's what you're

suggesting.

My judgement is if there is only one frequency available, it goes on
a first-come, first-serve basis.

Let's say you coordinate that 200-user "open" club system. Now a group
comes along which wants to put up a system with a link into a statewide
network of repeaters with over 10,000 users. I guess you should
decoordinate the 200 user system, huh? After all, which would be
"better use"? That's what proponents of closed-system decoordination
are saying.

All of these decisions become value judgements, and let your own personal
biases creep into the decision making process. You may think that open
repeaters are great, so whether you're aware of it or not you're instantly
prejudiced against closed systems, even if the closed system serves a
better purpose.

Let me get this straight: amateur prosigns are misused because former
CB ops came into the hobby and misused/butchered CB lingo. Right.

>they tend to revert to their old lingo. Just listen to any
>repeater when two (or more) brand new codeless techs talk to each other.

And codeless tech = former CBer! Wow.

>CQ is NOT a CW abbreviation. Consult any radio amateurs handbook.
>"Q" signals (CQ is not a Q signal) are "prosigns" used when operating

CQ is NOT an abbreviation or Q signal. Ok.

>C.W. to shorten a transmission ON CW! Few, if any, Q signals shorten

Shorten a cw transmission? I see. So that explains it! We understand
now why a bonafide cw op must send:

CQ CQ CQ CQ CQ CQ de AA1AAA de AA1AAA AA1AAA CQ CQ CQ
and:
QTH? QTH? QTH HERE IS CENTRAL OKKKEE EEEE OKEEFF EEEE OK BT FL FL
FLORIDA COPY? CP CP?

To be fair, things DO get short when you try to carry on a conversation:
You say: NICE CONDITIONS HERE TODAY AND I REALLY ENJOY IT WHEN THE WEATHER
COOPERATES SO NEATLY. HOW ARE THINGS AT YOUR END?
He says: FB FB GUD CP GT QSY SK

I'm impressed.

Ray, et al., lighten UP! If such things as hearing "73" or "73s"
on a repeater bother you so much, relax, take a deep breath, and
set the example you would like to hear (and _never_ berate! new
amateurs are nervous enough without getting verbal abuse on the
air!). If someone directs "what's your QTH" your direction, just
smile to yourself (feel superior if you must), and gently reply:
"I'm driving down route 75 right now just enjoying the ride. Where
are you at and are you doing anything special?"

There, don't you feel better already? :-)

Cheers, Best Regards, Chow, and so on.

That's exactly right. We're asking a body to manage a public resource
to it's best utilization. That by it's nature requires value judgements
be made, and that's always a political issue.

>>However, as spectrum managers, the body has to take into account the
>>interests of all of the amateur community, users as well as operators

>repeater directory.

That's been the League leadership style for decades. Pronouncements from
on high of decisions made behind closed doors by select, unelected panels,

followed by attempts to impose them on everyone, often using FCC rulemakings as a lever to enforce ARRL "leadership" will. Most amateurs who will be affected only find out months after the fact by getting out the magnifying glass and peering at the mice type in QST. That's not a satisfactory way to run a representative policy body.

>I would love for the ARRL to make a really good try at spectrum management, but

>League is up to the task.

I don't know if the "League" is up to the task, if by "League" you mean the staff in Newington or the Board of Directors, but the ARRL is some 260,000 people, slightly less than half of all US amateurs. Add in that other 340,000 and surely there can be found sufficient talented people to fill the locality spectrum management jobs. While spectrum management issues vary from locality to locality, and spectrum managers should reflect this by being elected locally by all amateurs in the area, there is a need for coordination of policy with neighboring management committiees, otherwise there is bound to be conflict at the borders. That requires some national body to *arbitrate* (not rule from Olympus) the inevitable disputes. That role may fall, by default, to the ARRL's elected officials, if they're up to it.

GMRS takes about 12 weeks, though they cash your check quicker than that. Land mobile, other than itenerant, takes a bit longer since it has to be cleared through the frequency coordination process. Broadcast can take *years*. We were finally issued our license *renewal* 2.5 years after our application, just in time to start the whole #$%& process over again. (We operated under temporary authority in the interim.) The wheels of bureaucracy grind exceedingly slowly.

>stated that trustees have the right to say who may and may not use their
>repeater.

The FCC says the trustee has the "right" to say who may use his machine, but the FCC does not *require* the trustee to exercise that right to form an exclusionary clique. I have the "right" to shoot you if I find you on my property (make my day law), but that doesn't mean I'm *required* to shoot you, or that it's necessarily a good policy for me to do so. (Sorta cuts down on the number of new friends who might drop over for a visit without a formal invitation.)

I operate an open repeater because I'm tying up access to public property, a channel pair, and I feel an obligation to provide an easement so that all owners of that property can have free access to it. That does not mean that I'll tolerate abusive illegal operations through the system, just as I retain the right to shoot people on my property if they leave the gates open or shoot the cattle, I'll track you down and deal with you if you mess with my system, but I do maintain an open door policy unless a person's actions suggest I have to deal specifically with them. I'd much rather the default be that I hold out the open hand of friendship, and only sic the dogs on you if you turn out not to want to be a friend.

I'm not sure I follow all the complaints related to this thread.
Having been licensed since 1957, and having operated extensively on
75 meter phone during the 1958-64 time period, I can state with absolute
certainty that many, many CW abbreviations were in use on 'phone and
even on 'phone traffic nets. Examples:

"QTH here is........"

"Handle here is....."

"QSL number 47, QRV." (station verifying receipt of one piece of
traffic and indicating readiness for the next piece.)

"W4XYZ, QRU" (typical check-in to a voice net by a station with no traffic)

"Let's QSY to....."

"Roger, Old Man, well, the XYL just rang the dinner bell, so we'd
better QRT here and put on the feed bag. We'll say 73 from here
and hope tomorrow there won't be so much QRM, although they're
predicting thunderstorms so we'll probably have to put up with
some Q-R-nancy, Hi Hi. Best of DX and catch you later, and thanks
for the Que-so."

I'm not saying that the above is right, proper, acceptable, or even
couth. But I'm at a loss to understand the desire on the part of so
many (apparently) vocal operators to suddenly force the use of 'correct
English" on the air as opposed to slang. Personally, I've always liked
"ham slang" on voice, but if someone chooses not to use it that's OK,
too.

I'd rather see "CB slang" used on CB only, and ex-CBers revert to
"ham slang" on the ham bands, but as long as they know what they're
talking about and they're not using "profane, indecent or suggestive"
verbage, does it really matter?

This looks like a good chance to dredge up a piece I wrote a few years back that's only peripherally related to "73's". I've been waiting for a chance to reuse it <g>.

73s

Yes, I know that the term "73" (best regards) doesn't need an "s" suffix, but in this case I'm referring to multiple instances of 73 -- hence "73s".

Have you ever noticed the ingenious excuses that a ham will use when he wants to terminate a QSO. Rather than hurt the QSOee's feelings by saying he'd rather read yesterday's newspaper than continue the QSO any longer, a ham will find some "crisis" needing his attention. Even on packet among locals, this B.S. keeps on flowing! Here are some genuine, over-the-air reasons for signing off. [The comments in the square brackets are mine.]

WELL GOT THE CALL FROM MY WIFE AS SHE NEEDS HELP WILL TALK TO YOU LATER.... TAKE CARE 73'S YOU DISCONNECT...
[Yeah, sure! When was the last time he helped the YF? Do you really believe he'd quit playing radios just to help the YF?]

Well, Chuck, I have coffee brewed upstairs and the xyl is finally up for all day.
[It took some strong coffee, but he finally woke the XYL. Now he'd better QRT before she finds him playing radios.]

Well Joe, I think I better let you go.
[Right. I'm unable to type DISCONNECT myself until you turn CONPERM OFF.]

The wife just called for dinner, so I'd better not be late.
[It wouldn't hurt for you to miss this meal -- you're already as big as a house.]

You are invited to add to the list. I'd continue it, but it's time for me to take the dog to his therapist. C'mon Spuds.

73,
Joe, K7JD

I called Ten-Tec with questions about the 6 meter transverter and they faxed me the schematic. I'm impressed with the circuit (16 transistor design). The SSB/AM/CW activity on 6 is at the extreme low end of the band (<50.5 MHz), above that is mostly Radio Control (for model airplanes, and FM repeaters). I plan on using mine with my TEN-TEC OMNI VI which tunes up to 14.530 on the 20 meter band - plenty of frequency coverage for serious 6 meter work.

NO! It is not legal to operate an amateur radio station *for hire*.
That's what you're doing when you restrict access to only those
who pay to use your system. Get a commercial license if you want to
operate a radio business.

A correction to the QSL manager given last month for the (CY9) cards. Via K0SN and not (K0XN) as reported.

Contests.
The BARTG HF Amtor/Pactor contest starts with Amtor day 0000 until 2400 July 9 followed by Pactor day 0000 till 2400 July 10.

Categories:
1. Single operator Amtor.
2. Single operator Pactor.
3. Single operator combined.
4. Multi-operator combined.
5. Short Wave Listener.
All single transmitter only.

Bands:
3.5, 7, 14, 21 and 28 MHz. amateur bands.

Exchange message:
Use FEC for calling CQ and ARQ for exchange of contest message.
Messgae will consist of - RST - Serial number - Time (GMT).

Scoring:
Each completed QSO scores one (1) point. Stations may be contacted again on other bands. Any station contacted using Amtor may be contacted again on the following day using Pactor. Duplicate contacts on the same band/mode must be clearly marked in the log.

Multipliers:
All DXCC countries (including W, VE and VK) and all W, VE and VK areas count as multipliers on each band.
Note:: any country or W/K, VE/VO or VK area may be counted again if worked on a different band but continents are counted once only.
Stations entering in combined categories count multipliers only once per band regardless of mode.

Scoring:
QSO points times multipliers times continents (max. 6).

Log sheets:
Use seperate log sheets for each band and mode. Logs must show Band, Mode, Callsign, Message sent and received, Multipliers and Points claimed. SWL logs must contain Date, Time, Band, Callsign of station heard, report sent by that station and Callsign of station being worked.

Summary Sheet:
Full scoring, times of operation and address for correspondence must be shown, and in the case of Multi-Operator stations the names and callsigns of all operators involved with the station operation during the contest. Any incomplete entries will be classified as check logs. All logs must be received by September 10 1994 to qualify.
Suitable log and summary sheets are available from the contest manager. UK entrants send (A4) s.a.e. Outside UK please send 6 IRC's to cover postage.
Computer generated logs containing all specified information are welcomed.

Please send your contest or check logs to:
John Barber G4SKA P.O.Box 8, Tiverton, Devon EX16 5YU England.

Awards:
Trophies will be awarded to the winning station in each category and certificates will be awarded to the top 3 stations in each category and the top 3 single operators for each mode in each continent.

Your comments on the contest would be much appreciated.

Notes of interest.

Further changes in the CIS prefix allocation.
Stations in European and Asiatic Russia now use RK, RN, RU, RX plus optional prefixes in certain cases RA, RV, RW, RZ and UA.
The old UZ prefix is now in use by stations in Ukraine URZ-UZZ.

Thanks this month to..
G3ZYP (BARTG Publicity Officer). ARRL (ARLD).

BARTG caters for all DATA interests with information-components-kits -ready built units and software from experts. Members receive a 120 page quarterly journal devoted to data modes. Beginners guides for most data modes are available. The group sponsors HF and VHF RTTY contests, administers its own DX and members award scheme and runs an annual rally.

This copy of BARTG News is posted by Iain Kendall (G6ARO) who can be contacted via Internet e-mail at.. iain@humber.ac.uk Items for inclusion in the broadcast may also be mailed to this address, as well as any queries regarding membership or services offered by BARTG.

>Since a repeater trustee is responsible for all traffic rebroadcast through
>his/her machine, he certainly should have control operators capable of
>monitoring the system all day.

Your assertion is false. A repeater may operate under automatic control, 97.205(d). A control operator need not be present when a station is operated under automatic control, 97.109(d). A station licensee operating a station under automatic control is only obligated to cease automatic operations if notified by the Engineer In Charge of his district of harmful interference, 97.109(d). The FCC has consistently ruled that it is the originating station who is responsible for improper content of automatically repeated transmissions. Only in the case of third party traffic is a repeater licensee responsible for content, 97.109(e). No phone patch, no problems.

Don't be misled by recent FCC statements regarding digital messaging systems (IE they mean BBSs). In that case, all retransmissions involve third party traffic.

Did the FCC compensate amateurs when they took away the 11 meter band?
Did they compensate amateurs when they recently pulled 2 MHz of the
220 MHz band? And did they further compensate *repeater owners* when they
withdrew a further segment of the 222 MHz band from repeater use at the
request of the ARRL? Are they planning to compensate amateurs when they
sell off the 2.3 GHz spectrum? In all cases the answer is no. Spectrum
management is a public policy issue since spectrum is public. No one is
guaranteed a bit of spectrum in perpetuity for their private use. If
changes in spectrum policy causes someone to lose the use of their
investment in equipment, too bad. The precedents have been set, channels
aren't forever.

>>Red-Baiting as a form of intelligent argument disappeared in the 1950's.

>You're entitled to your opinion, of course. Just as I am entitled to my
>opinion: that you are determined to force repeater trustees to make their
>hard-earned incomes and labor available for you to use and abuse for no
>compensation and with no controls whatsoever.

No one is forced to become a repeater licensee, so no one is forced
to expend any funds or labor for someone else's benefit. Repeater
operation depends on usage of a public resource. It's incumbent on
such operators to offer an easement to allow all owners of the resource
access to it. That's common law. You can't legally put a gate across
a public road and start charging tolls, or denying access altogether.

In article <CqzCr0.908@spk.hp.com> dubner@spk.hp.com (Joe Dubner) writes:
> Have you ever noticed the ingenious excuses that a ham will use
>when he wants to terminate a QSO. Rather than hurt the QSOee's feelings
>by saying he'd rather read yesterday's newspaper than continue the QSO
>any longer, a ham will find some "crisis" needing his attention.
> [Genuine, on-air excuses removed for brevity]

I'm sure we've all noticed such behavior. Often, two hams will spend more
time trying to convince each other how sorry they are to have to end the
QSO, then they do in actual conversation. The following recreation
is typical:

KG7OS: CQ, CQ, CQ, this is KG7OS calling CQ and listening...

KB7LVU: KG7OS KG7OS this is KB7LVU KB7LVU over

KG7OS: KB7LVU, you are 59 in Vancouver, Washington. How copy?

KB7LVU: KG70S, you are also 59 in Seattle.

KG7OS: Roger, LVU. Sorry, old man, but I have to QRT now.
The wife asked me to put the cat out, and if I don't,
she'll throw *me* out.

KB7LVU: Yeah, I know what you mean. I have to go, too. My
daughter asked me to do a few things for her today.

KG7OS: I'd love to hear about it, but the cat's really starting
to smolder now. I really should throw some water on
him or something..

KB7LVU: Uh-oh! They just started the wedding march. If I don't
get downstairs before she starts walking down the aisle,
I'll never hear the end of it! 73 from KB7LVU!

KG7OS: Oops! That stupid cat's got the draperies burning now,
too! 73! KG7OS Clear!

Of course, six seconds later, KG7OS was calling CQ down 5, and KB7LVU
switched bands and did the same. While Miss Manners would no doubt approve
of each ham's efforts to spare the feelings of the other, as do I, such
herculean efforts are a needless waste of bandwidth. On the other extreme,
one ham would go suffer from selective deafness on hearing the other's
call, and the conversation would not take place at all. Slightly less
extreme would be brutal honesty:

. . .
KG7OS: Roger, LVU. Look, you sound like a real jerk, so why

don't you go away, and give someone with half a brain
a chance at answering my call?

KB7LVU: Sure thing, OS. I've got better things to do than
talk to an old geezer like you. Why don't you go
downt to the hypochondriac net on 160, and tell them
all about your prostate surgery?

KG7OS: Why you whippersnapper, I oughta...

...and so on. You get the idea: though more honest, the direct approach
still wastes bandwidth. I propose we replace "73" (and its illegimate
and much disdained sibling, "73s"), with the following:

129: No offense, Methusela, but I'd rather chat with someone
born in this century. So long, and don't overdose on
your Geritol!

3: No offense, sonny-boy, but I'd rather talk to a grown-up.
Can you give mommy or daddy the microphone?

35: Sorry, but if my wife caught me talking to a YL she'd
take a sledgehammer to my rig, and then go after me.
(on a repeater, this can be followed with an invitation
to meet somewhere for an "eyeball" (or is it "eyefull"?)).

6: California is NOT "DX". I said "CQ DX", not "CQ IDIOTS"

7.5: You're a bit dim. Turn off your radio, and let me talk
to a person with a brain.

40: Huh? Are you still yakking away? Get lost before you
put me to sleep.

This only covers a few of the many possibilities, but you can easily see
how much more efficient this would be:

...
KG7OS: 7.5!

KB7LVU: 129!

I'm sure the ARRL is already collecting suggestions, and will shortly
submit a list to the FCC for approval. Start planning now what you'll
do with all the bandwidth that will be released!

Be fair, Greg, and mention all the reasons against the proposal. It would have created a nightmare situation because of the impossibility of tracing who was newly licensed and who was bootlegging.

The League has been pushing the FCC to implement Electronic Filing of applications, whereby the FCC would NOT have to waste time keying the data. The ARRL VEC has been online to do this for some time, and the bottlenecks on this have been at the FCC end (getting the new computers online, etc.).

Please keep in mind that the ARRL has been working on SENSIBLE solutions to the licensing delay issue when you go and vote.

>being served a tremendous disservice.

This is consistent with the behavior of all bureaucratic organizations.
The FCC maintains that they are under staffed. I can't comment on the
veracity of this statement. However, they just granted four _free_
Pioneer licenses to PCS (Personal Communications Services, cell phones
of the future) companies without even investigating the merits of the
companies' plans. Everyone else has to buy spectrum for this service.
They are expecting that you will write your congress person complain so
that they can get more budget. What are the ICBM coordinates for
Washington, DC anyway?

Well, I just had to get a new license for the marine band radio on my boat and it took less than three (3) weeks round trip. Of course the license cost $35 :-) I'll bet that many new licensees would gladly pay the $35 for that kind of turn around.

Of course you need more than a simple varicap to get 200 ppm (see my previous post). I happened to need to build a 19.2 MHz. VCXO last week, and I had no trouble tuning 4000 ppm below series resonance and 2000 ppm above series resonance (that's a total of over 100 kHz.). When I tried to go above 2000 ppm on the high side, I did have some (predictable) trouble jumping to a spurious xtal response up there.

SB NEWS @ AMSAT $SPC0606
* SpaceNews 06-Jun-94 *

BID: $SPC0606

=========
SpaceNews
=========

MONDAY JUNE 6, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* DOVE SPEAKS *
===============
It has been said that good things come to those who wait, and this week it is a pleasure to report that DOVE-OSCAR-17 is uttering its first words! Congratulations to Jim White, WD0E, and the other spacecraft controllers for their fine effort in bringing this injured satellite back to life.

* MIR INFORMATION *
===================
Sven Grahn of Sollentuna, Sweden provided the following information regarding the frequencies and emissions used by the Mir space station.

Sven reports the signals on 166 MHz are PCM FM signals and the modulation index is so high that two peaks appear in the signal spectrum, one on each side of the carrier. The carrier is on 166.000 MHz creating a signal peak at 166.150 MHz and another peak at 165.850 MHz.

The signals from Soyuz and Progress on 922.75 MHz contain a carrier plus telemetry sidebands. The modulation type is unknown. Sometimes tones are frequency modulated on the carrier. These contain sixteen-bit words, which probably constitute a command verification link. There is a similar link from Soyuz and Progress on 926.07 MHz operating simultaneously with the 922.75 MHz link.

For Progress and Soyuz, the 922, 926 and 166 MHz signals are switched on simultaneously by ground command.

[Info via Sven Grahn]

* UNAMSAT-1 NEWS *
==================
The launch campaign for the UNAMSAT-1 MicroSat is currently underway with launch set for 15th June, but there is a possibility that it might be delayed about one week. The launch will be on a refurbished Soviet SS-18

ICBM designed to carry satellites. The final Keplerian elements of the intended orbit are not known, but the known parameters are as follows:

Orbital Inclination = 73 degrees
Altitude = 730 KM
Orbital Eccentricity = 0.00000000

The satellite will separate from the rocket with no spin. All transmitters will be silent at separation and for a period of at least 1 hour. The VHF receive antenna and the two halves of the canted dipole for 40.997 MHz will be collapsed and then they will be deployed 3 minutes after separation.

The following information was first published in mid-1992, but may have changed since:

As with the earlier MICROSATs, UNAMSAT-1 it has five modules, each about 20 cm on a side. Four of the five modules are updated clones of existing MicroSat hardware/software carrying Dual 70cm PSK transmitters; a computer and power system; a 5-channel 2M FSK receiver and running similar software to the other MICROSATs. The main differences from the earlier MicroSat configuration are that the computer will have 4 MB of RAM instead of 8 MB and UNAMSAT-1 will be equipped with Gallium Arsenide solar panels.

The innovative new addition is a brand new on-board experiment in the 5th "TSFR" ("This Space For Rent") module:

UNAMSAT-1's primary mission is to act as meteor sounder. It will contain a 40.097 MHz transmitter with 60 watts output during pulses from which can be varied from 1 to 10 msec in duration and with a pulse repetition rate of 1 to 10 seconds, as controlled by a computer subsystem. The meteor echoes will be detected on a receiver at the same frequency designed to detect the returned echo and measure its doppler shift. The use of the meteor sounder is to obtain research data on the full-sky spatial and velocity distribution of meteors, with the focus on a search for high-velocity meteors originating outside our solar system.

The 40 MHz frequency for this transmitter is in accordance with the ITU frequency allocations table for scientific research and both the 40 MHz and amateur frequencies have been licensed by Mexican authorities.

The meteor receiver is an SSB "zero-IF" design and the return echoes are digitized and stored in the normal computer's RAM. After each pulse, the spectrum of the received signal will be determined using the onboard computer as a DSP Fourier Transform spectrum analyzer. If a meteor echo is detected, the echo will be saved for later transmission as a special telemetry frame.

The 1-10 second repetition rate for the meteor transmitter will be adjusted depending on the state of charge of the batteries and other spacecraft power requirements, and also on the time domain requirements of the echoes.

When UNAMSAT-1 is not involved in meteor research, it can be turned into a standard PACSAT message store-and-forward satellite and data will be sent

using standard amateur AX.25 packet but the actual frequencies haven't been determined yet.

[Info via Richard, G3RWL @ GB7HSN.#32.GBR.EU]

* LUSAT-1 NEWS *
================
The following packet frame was received from LUSAT-1 on 29-May-94 by KD2BD in New Jersey at 16:11 UTC:

LUSAT-1>AMARG [29-05-94 16:11:21] <UI>:

May 21.

OBC crashed on May 17 at +/- 2:45 utc, lat 45s, lon 43 w.
Only digipeater is available.

LU8DYF, LO-19 command station.

Raw telemetry should be directed to Noberto, LU8DYF either via packet radio at LU8DYF@LU8DYF.BA.ARG.SOAM, via the Internet at lu8dyf@asarin.org.ar, or via any active Pacsat by directing the message to LU8DYF. Special awards are available to those who submit telemetry reports.

* REPORT FROM HI8 *
===================
Bill Meara, N2CQR/HI8 in Santo Domingo in the Dominican Republic sent a FAX to let everyone know that there is a small but enthusiastic group of satellite operators in his country. Pericles, HI8P, a lifetime member of AMSAT, and others have recently been bit by the RS satellite bug. They also listen for DOVE, connect to Mir, and work the SAREX experiments when flown on the US Space Shuttles.

Bill reports that RS-10 and RS-12 are performing well, and that QSLs for ROBOT contacts are available through DF4XW. Bill uses an old Hallicrafters HT-37 transmitter and Drake 2-B receiver with dipole antennas to work RS-12 Mode K. His station is just another example of a low-cost, low-frills station that can be used to make satellite contacts.

* FO-20 NEWS *
==============
On 19-May-94, the FO-20 command station announced that a problem exists in FO-20's onboard computer system. The satellite's transponder will remain in the analog mode (JA) until further notice.

[Info via Kazu Sakamoto, JJ1WTK]

Currently looking at the "paket 5.1" program from Australia. Is this the latest version of the program or is there an update available! If there is an update - where is it available for downloading? I do not have access to CIS!

Thanks for any information that you have to offer on "paKet 5.1" I have tried contacting the author, the USA lliason but no response from either of them for weeks now!

>Scott Rosenfeld Amateur Radio NF3I Burtonsville, MD | Live $5.00

But even in a DX contest, the foriegn country would never know the
operator was a third party, so where's the problem. Additionally,
the contact would not be passing any third party traffic, but
merely a contact wholly under the control of the station licensee.

Anyway, that's how I see it, and as already mentioned, it's
perfectly OK for Field Day.

Cheers,

: I have a TA-33 up which must be about 20 years old but works fine.
: I just ran into a TA-40-KR 40 meter add on kit. When we put it on, the
: antenna analyzer showed that the SWR was way out of line on all the bands.
: 40 was nowhere to be seen, 20 was way off, others not quite so bad. This is
: measuring on the ground.

: Any ideas? Tnx Bob
Have you measured it on the ground BEFORE adding 40 meter kit?
My experienve is that SWR curves on the ground have NOTHING to do with
what you're getting on the tower (the later being much better :-)

Macintosh Amateur Radio Software - June 1994
Version 1.0.7

Please feel free to distribute this list as widely as possible. Many of you have asked if it is OK to cross-post this list? I don't mind, but I would like to know where it is going. If you think it should be cross-posted to other USENET groups, please let me know so I can try and manage these. We don't want to have any duplication or our welcome will be wore out!

Those of you that can tell me about ANY of these programs compatibility with System 7 would be appreciated! I am going to be adding a System 7 compatability section to EACH description in future releases. If the application is KNOWN to execute properly under System 7, the System 7 anotation will be placed as the last line of the product description. More clarification on levels of System 7 compatibility in the future editions... but this is a start!

Some of the information in this list was gleaned from flyers supplied by the software vendors, or in some cases from reviews in amateur radio publications or the README files included with the archive. Some of the information has not been verified for a long time; please check with the vendors/authors for the latest product specs, pricing, etc.

NEW/CHANGES: I am continuing to add more version numbers so that our users will know if they have the most current release. Thanks to those that have already sent them in... I'll accept all corrections!

The newest e-mail I have received indicates a new product soon to be released for the Mac which has been in the DOS world for awhile... the Automatic Position Reporting System (APRS) is currently being beta'd. It is expected to be released soon.

The ftp site at The World is no longer. It has been moved to oak.oakland.edu. Scott-WY1Z is maintaining these file as the Librarian of the Boston Amateur Radio Club. Look in the following path: /pub/hamradio/mac. If you'd like to archive your software.files here, please contact Scott at wy1z@netcomm.com.

Finally we are starting to see soem advances in Callbook data for the Mac. Mark Sproul, author of Packet Tracker, has completely revised the HAMCALL application that first appeared in the Oct 92 issue of the Buckmaster HamCall CD-ROM. This one is very nice. Well done Mark! RT Systems in Huntsville, AL has included a Mac interface for their SAM database. No information on this one just yet... but some Mac users will be getting information to me soon.

Check at the bottom of this list for more information on ftp'able sites carrying Amateur Radio software. The ARRL ListServer is also carrying the latest version of this list... in case you loose this one!

*** Collections ***
<MacNet v5.31>
Join MacNet and get included in the latest version of "Macnet Roster", a HyperCard 2.x stack that now has > 400 members and is the proverbial "Who's Who" of hams using Macs. You'll find "Macnet Roster" a great tool for finding out who, what and how other hams are using their Macs with their ham stations. It even includes this file!
Send $30.00($40.00 DX) check or money order to: WD1V, John Seney, 144 Pepperidge Drive Manchester, NH 03103 USA.
All disks shipped First Class Mail PPd. Get the COMPLETE Macnet Software Collection ppd. on 10 disks!
Based on your interests, you'll also receive public domain shareware received by our members.
System 7

<Project Mac>
Contest logging, antenna design, satellite tracking, clip art, etc. Microsoft BASIC required for many of the programs. Most of this software is now available in the MacNet collection. Send three formatted 800K Macintosh disks with stamped, self-addressed disk mailer to Stan Horzepa, WA1LOU, One Glen Ave., Wolcott, CT 06716-1442. Stan can be reached at horzepa@gdc.com
NOTE: Stan has indicated much of this software is "old" and may not work on some newer Macs. Also he notes that most of his collection is available in the MacNet collection above. He will send anyone what he has if you send him the disks and SAS mailer.

<Amateur Radio Software for Macintosh>
Extensive catalog including logging, Morse code, gray line, test preparation, satellite tracking, contesting, and packet radio programs.
ZCo Corporation, P.O. Box 3720, Nashua, NH 03061. NOTE: This company has been rumored to be out of business!

<Amateur Radio #1>
Contains satellite tracking, Morse code, attenuator design, and Ohm's law calculator programs. Kinetic Designs, P.O. Box 1646, Orange Park, FL 32067.

*** Test preparation ***
<Ham Test Stacks>
HyperCard stacks containing the entire question pool for each license class. Can be used for preparation or generating actual tests. The current releases are: Novice v4.1(new questions eff. 7/1/93), Technician v4.0(new questions effective 7/1/93), General v2.4, Advanced v2.4, Extra v2.4.
Available via anonymous FTP from various sites, including uxc.cso.uiuc.edu (/pub/ham-radio). NOTE: The newest releases of Novice and Technician stacks are available at uxc.cso.uiuc.edu (5/6/93) Author is available via Internet: dls@genrad.com
NOTE: Diana no longer is supporting this software, she no longer has a Macintosh computer. Diana thanks for your wonderful contribution to the Amateur Radio community for these stacks!

System 7 savy with HyperCard 2.1

<MacHam>
Test generators and study aids for the Technician, General, Advanced, and Extra class written elements. Includes the complete question pool for each license. Hypercard based.
Coyne Co., P.O. Box 2000-200, Mission Viejo, CA 92692.
System 7 with HyperCard 2.1

*** Morse code practice ***
<N6MZV Morse Trainer>
Lets you practice any combination of letters, numbers, and/or punctuation characters. Can send user-created text files.
RT Martin, N6MZV, 10382 Orange Avenue, Cupertino, CA 95014. Also available via anonymous FTP from ftp.apple.com (/pub/ham-radio).
Shareware.

<Morse Code Tutor v1.6> - used to be called Morse Tutor
Sends random groups of letters, numbers, and/or punctuation characters. Available via anonymous FTP from ftp.apple.com (/pub/ham-radio). Or send formatted 800K Macintosh disk with stamped, self-addressed return disk mailer to Jack Brindle, WA4FIB, 726-175th Street SW, Bothell, WA 98012; Compuserve: 73365,606.

<MorseMania V1.0>
Designed for those already familiar with Morse code who want to improve their speed. Allows code practice at various speeds and audio pitches. Can generate random sequences or play the contents of user-created text files. Freeware. Available via anonymous FTP from simoon.stanford.edu (/pub). Contact Edward Plumer, KM6IQ, for more information; Internet: plumer@simoon.stanford.edu.

<MacMorse>
Randomly sends chosen characters. Lets you create your own practice files. David A. Kall, 700 Marine Parkway #314, New Port Richey, FL 34652.

<MacMorse v1.3>
MacMorse is designed to help you learn Morse code and improve your receiving speed. It has several ways that it can send letters and punctuation. Shareware. Doug Havenhill, Dynamics and Control, 7143 West Sunnyside Drive, Peoria, AZ 85345.

<MacSamuel>
Sends random words, random character groups, and user-created text files. Can also create simulated QSOs with randomly generated text and callsigns. Avant Systems, P.O. Box 5437, Pittsburgh, PA 15206.

<Zihua Morse>
Designed to teach Morse code to beginners and to improve the accuracy and speed of advanced users. Responses can be typed into the computer; the program will calculate accuracy and timing statistics for each session. Optional speech synthesizer reads

the characters out loud for an accuracy check. Zihua, P.O. Box 51601, Pacific Grove, CA 93950.

<Sparks-II v2.0.5>
More Code training program. Available for anonymous ftp at rahul.net /pub/davidj/radio

<Morse Master v1.0>
The newest of the morse code training programs. MM calculates the real speed as follows: Real speed = Number of Words/end time - start time. And the lengh of word is generating randomly, so if you set even 5WPM, sometimes another value will appear. However you should believe the slidebutton's value. If you repeat many times, the average speed should be 5WPM (if not... anyway, believe the slidebutton's value). Archive is available mac.archive.umich.edu, path: mac/util/organization/morsemaster1.0.sit.hqx The author can be reached thru the following e-mail addresses: h79261a@kyu-cc.cc.kyushu-u.ac.jp. (Eiji AOL account is no longer valid - moved back to Japan after his studies.)

<Morse Trainer-US v1.1.1>
MorseTrainer is a powerful tool for learning and training Morse code. Features: Three different training modes: user text, random text, library text; Arbitrary signal pitch and timbre; Arbitrary speed and tempo; Multi-alphabet support; Random text generator; Text library editor; On-line alphabet; On-line manual; Help Balloons; And a lot more. New features in 1.1: Enhanced sound generator, volume control and risetime control. The pitch is set in steps of 10Hz instead of using MIDI frequencies; Speed and tempo limits increased to 80 words/minute as a result of the enhanced sound generator; User-selectable font in the Misc settings dialog. FREEWARE!
This version uses TrueType fonts instead on bitmaps fonts so that the user can distinguish 0(zero) from O(character). Furthermore speed and tempo can be given in either characters/minute or words/minute. Archive is available mac.archive.umich.edu, path: mac/util/organization/ Author is available via internet: sund@tde.lth.se
System 7 savy

<CW Speed Builder v3.0>
This program is for improving Morse Code (CW) reception skill. The major difference between this and other Morse Code training programs is that this one will not continue sending until you provide the correct answer. Major changes which have been suggested and implemented since last version include: after three incorrect responses the program shows the correct character; the list of characters at the end which will show those you know and those you need more practice on; the frequency of the tone has been changed; volume of the tone has been reduced; the character " - " has been added (dah dit dit dit dah) Comments can be sent as

follows: America Online:K7UPJ, Internet:k7upj@aol.com, Packet radio:K7UPJ@KA3T, Compu$erv:70521,2356, Mail:Box 84, Cascade, MD 21719

*** Packet and other digital modes ***
<NET/Mac 2.3.40>
Allows simultaneous TCP/IP, AX.25, and NET/ROM connections. Requires a TNC with KISS mode. Copyright, but free for noncommercial use. The latest releases have added support of multi-port serial boards like AE's QuadraLink. It is now possible to have up to 16 TNCs connected up to a Nubus Mac!
Adam van Gaalen, PA2AGA, (Internet: adam@IGG.TNO.NL) has been making the modifications to NET/Mac. This version (and others) is available via anonymous FTP from ucsd.edu (/hamradio/packet/tcpip/incoming), mac.archive.umich.edu and oak.oakland.edu (/pub/hamradio/mac/digital/)
System 7

<Domain-to-Hosts Converter 1.0r3>
This application will create a hosts.net file from the domain.txt file that PC owners use with NOS. Created by Ken-NS1C is available on many TCP/IP packet switches in New England.program.
System 7

<IM/Mac 1.0b27z>
Mailer program for use with the SMTP protocol. Alternative to the BM program that comes with NET/Mac. Written by Ivo van Ursel, ON1XK. Ivo is continuosly updating his mailer program. His newest release supports built-in BinHex support, selectable sound chimes for incoming mail, "quoting" of forwarded messages and lots more. If you are not using this program... why not? Check for the latest release in the directory before "blind" ftp'ing. This software supports System 7's Ballon Help and is System 7 savy! Available via anonymous FTP from ucsd.edu (/hamradio/packet/tcpip/incoming).
Author is available via internet: on1xk@igg.tno.nl <<-- new address for Ivo!!!
System 7 savy

<SoftKiss 1.8>
Control panel device that emulates a TNC running in KISS mode. For use with packet-radio modems such as the Baycom kit and PacketMac Modem. Version 1.8 July 9 1993 update since 1.6. KD6PAG found a bug in quoting recieved escape and end characters is sofktiss 1.6. The bug and the fix and patch are all correct, thanks for some great detective work. Lots of doc files and drawings included in this archive! Requires the Serial Tool from Apple's Communications Toolbox! Available on the HAMNET forum of Compuserve, America Online and via anonymous FTP from akutaktak.andrew.cmu.edu (/aw0g).
System 7

<PacketMac Modem>
PacketMac Modem kits can be obtained from: Sigma Design Associates, P.O. Box 49085, Colorado Springs, CO 80919, (719) 260-5513 (after 1/94). Dexter Francis can be reached at FRANCIS4@AppleLink.Apple.COM

<Savant 1.0.2>
A new packet terminal front-end by the author of Virtuoso. Savant has a split window interface, but it's also a multi-window, multi-connection interface and will work with almost any TNC,

unlike MacRatt or HostMaster.
A demo version of the product is available at cpre1.ee.iastate.edu
(pub/ke0ph) or via US Mail, send a SAS disk mailer and disk to CM
Technologies, Inc., RR#1, Box 83A, Kelley, IA 50134 (515) 597-2051.
System 7, 32-bit, '040 cache clean and it supports the required
AppleEvents.

<MacRatt with FAX>
Terminal program for use with AEA's PK-232 multimode controller. Supports packet, CW, RTTY, AMTOR, and facsimile. Includes cable. Advanced Electronic Applications, P.O. Box C-2160, Lynnwood, WA
98036.

<Host Master 1.2>
The Kantronics Host Master software provides an easy to use, multifunctional terminal program for the TNC. Host Master Mac is a simultaneous multi-mode terminal program for the Mac written by Kevin Krueger, N0IOS and marketed by Kantronics. It is a commercial product available from most of the ham radio stores and supports single and multiple packet connects, packet monitoring, and HF operation (with KAM) each on a separate window, all at the same time. This package retails for $69.95 in the US and is intuitive, friendly, and well supported by Kantronics. Current version as of 10/20/93 is 1.2. It is hoped that a future version will support FAX but currently Hostmaster supports PACKET, AMTOR, RTTY, PACTOR (KAM ver. 6.0), CW, and NAVTEX. Features: text and binary file transfer; packet conferencing; color or B&W windows; cut, copy, paste between windows; call exchange and data/time stamp; auto startup/shutdown commands; transmit buffers for each mode; simultaneous dual port, !
multiple connects; supports KPC-2,
KPC-2400, KPC-4, KAM and Data Engine. Requires: Macintosh Plus w/ System 6.05 or better. Current Kantronics firmware.
System 7 compatible, with baloon help

<PacketTracker 1.07>
PacketTracker ver 1.07 is a SHAREWARE program that monitors packet activity and keeps track of what is going on. It draws a graphical map showing who is talking to who and displays statistics of all current stations and keeps a running tally of activity. PacketTracker was written for both the casual packet user and the network manager or BBS operator. The casual packet user will be able to learn a great deal about what is happening in packet around him; which stations are generating the most data and what some of them are. he will be able to see graphically what stations he can hitdirectly and which ones he cannot. For the network manager and BBS operator, PacketTracker provides extensive insight to the operation of the local network and problems such as excessive retries on a path. It also allows for extensive logging of channel utilization and other pertinate information.
NOTE: This application requires the Apple's Serial Tool from the Communications Toolbox which is NOW included in the archive.
System 7

<APRS>
There will soon be a Mac version of the APRS (Automatic Position
Reporting System) software. Folks use this to collect packet beacons, plot channel activity, track chase vehicles for marathons, etc. When it's out, I'll let you know.

<DSK_Loader 1.0>
DSK_Loader is the Macintosh equivalent of the DOS program DSKL. With this program you can communicate with the DSK (DSP Starter Kit) from Texas Instruments. This program bootloads a simple communications kernel and then loads other software using this kernel. Other options are: Fill DSK memory with a certain value; Dump DSK memory into a textwindow, for further processing; Execute programs on the DSK; Graph output from the DSK; Act as a dumb terminal to the DSK.
The DSK and thus DSK_Loader is most interesting for people who want to experiment with Digital Signal Processing at low costs.
For HAM-Radio operators it is a very interesting piece of equipment, Some applications, like the KC7WW port of the W9GR filters are included.
This program is public domain so you can distribute it to others, put it on BBS's, FTP sides, etc. If you encounter some problem s, bugs, find language mistakes in the help-information (english is not my native tongue), or just want to know me that you use this program, feel free to write to the address below, by email, or just postal mail. Please add information about the system you use, and the application you use the DSK for. I also like to hear your wishes for future versions.
Author is available on the internet: G.Polder@CPRO.AGRO.NL. Gerrit Polder-PA3BYA, Prunus 8, 3904 LV Veenendaal, The Netherlands

*** RTTY ***
<MacTTY>
Decodes Baudot or ASCII transmissions. Can also be used for packet radio and other digital modes (including landline data communications). Includes split screen, a 15,000-character type-ahead buffer, and canned messages. Summit Concepts, Suite 102-190, 1840 41st Ave., Capitola, CA 95010.

<WeFaxWorks>
Weather facsimile terminal program for use with Kantronics TNCs. Kantronics rfconcepts, 1202 E. 23rd Street, Lawrence, KS 66046.

<MacMultiCom 1.0>
MFJ sells MacMultiCom 1.0 for their 1278 multimode controller. MacMultiCom supports all of the modes of the 1278: packet, rtty, ascii, pactor, amtor, gray scale faxes, and many different formats of color sstv. The program requires a minimum of a MacPlus and a hard disk. Requires a color Macintosh and System 7 for best results.
System 7

*** Logging ***
<Ham Radio Station Logbook>
HyperCard stack that stores and displays radio contact information. Automatically stamps entries with time and date. Contacts can be sorted by frequency, call sign, or date of contact. Includes report formats, a "Q-code" reference list, and on-line help. SanSoft, 892 E. Quail Place, Highlands Ranch, CO 80126. (The same program appears to be available from Heizer Software, 1941 Oak Park Blvd., Suite 30, Pleasant Hill, CA 94523.)

<FDLog!>
Contact logging and duping program. Can transmit any of ten programmable CW messages. Generates real-time statistics on QSO rates. System One Control, 3900 85th Ave N, Suite 200, Brooklyn Park, MN 55443.

<MacContest 3.5>
Allows real-time or post-contest logging of a wide variety of contests. Checks for dupes,

figures scores instantly, and offers various printouts. Interfaces to TNCs for CW and RTTY contests, to DX packet clusters, to Kenwood transceivers, and to MacinTalk for easy post-contest entry. Gerald Eberle, HB9CEY, P.O. Box 13, CH-4417 Ziefen, Switzerland.

<LOGic>
(Macintosh version scheduled.) Lets you define the rules determining dupes (such as once per band or once per contest). Displays heading, distance, and other information about the country being worked. Automatically enters contact time; if interfaced directly to a radio, also enters the frequency, band, and mode. Shows status toward earning amateur-radio awards. User-definable database fields. Exchanges data with other programs. Personal Database Applications, 2634 Meadow Bend Court, Duluth, GA 30136.

<HF Logger 1.2>
A real fine HyperCard logging program! (hey... thats all I got!) N0QGQ

<Simple Log .2b>
This little utility is a handy way to create a logging file that you can later import into any data base for analysis, etc. It also shows you that just about anyone can use Think C and create something on the Mac! Let me know if you'd like the source code. WD1V @ WA1WOK.NH.USA.NA Author is John Seney - WD1V, e-mail address is jseney@aol.com. For a copy of this program, mail a SASE disk mailer and 800K disk to: John D. Seney, WD1V, 144 Pepperidge Dr., Manchester, NH 03103
System 7

<Marathon>
Contesting/logging- Have seen references to (March 92 CQ magazine) and heard good things about MARATHON by N 0 IOS. I believe a demo was available for $8. Last address known is: Kevin Krueger, N0IOS, 1780 Ruth St., St.Paul, MN 551O9

*** Callbook data tool ***
<Hamcall 2.0>
This is the application that is used to support Buckmaster's Hamcall CD-ROM. This application provides much more data than previous versions including lat and long coordinates. Allows search by callsign as well as Zip Code sorts.
More information at info@buck.com
System 7

<SAM>
Amateur Radio Callsign Database now supports Mac interface. No additional information at this time.

*** Propagation, gray line, DX headings ***
<DX Map v1.1>
Displays a map of the world with the terminator. Gives location, prefixes, zone numbers, distance, and heading for any country you select. Freeware. Requires HyperCard 2.0. Available via anonymous FTP from joker.optics.rochester.edu (in the /ham/dxmap directory). Or send a formatted 800K Macintosh disk with a stamped, self-addressed disk mailer to Len Saaf, NV2Z, 52 Raleigh Street, Rochester, NY 14620 (Internet: saaf@joker.optics.rochester.edu).

<SatTrak>
Primarily a satellite tracking program, but also calculates beam headings, Maidenhead grid locations, MUF plots, and band openings. Shareware. Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or send a formatted 800K or 14.MB Macintosh disk

with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.

<Sun Clock>
Desk accessory. Displays a color map of the world, including the terminator. Indicates current time for any location. MLT Software, Inc., P.O. Box 368, Portland, OR 97207.

<DX Window>
Draws a great-circle world map centered on your QTH, with day/night terminator indicated. Displays over 400 DX locations with prefixes and beam headings. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<Skycom 1.1>
Enter solar flux and get propagation predictions to desired areas
of the world. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<Skycom 1.5>
Provides sunlight status at both ends of a path; MUF, F0F2, and FOT frequencies; S/N ratio of the link; and other information. Engineering Systems, Inc., P.O. Box 939, Vienna, VA 22183.

<DX Helper v1.57B>
Displays beam heading, distance, gray line, and propagation information. Generates great-circle maps. Identifies prefixes, zones, and oblasts. Includes code practice. MacTrak Software, P.O. Box 1590, Port Orchard, WA 98336.

<Mac MiniMUF v5.1>
A greyline and propagation predictor based on the PC version of MiniMUF by K4CFV. It is available directly from him for the price of a formatted disk and SASE (disk mailer). His address in callbook or: Bob Stamper K4CFV, 12510 Shadowrun Blvd., Riverview, FL 33569

<Mac ShortWave v1.2>
A program called Mac Shortwave that figures MUF and LUF. BXA Research in Plano, Texas

*** Satellite tracking ***
<SatTrack v1.02>
Tracks one satellite across a world map as it moves, displays the instantaneous position of several satellites, or generates tables of all satellites visible from a certain location at a given time. Also calculates beam headings, Maidenhead grid locations, and MUFs. Shareware. Available via anonymous FTP from sumex-aim.stanford.edu (/info-mac/app). Or send a formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Mike Pflueger, WD8KPZ, 6207 W. Beverly Lane, Glendale, AZ 85306.
System 7 compatible.

<MacSat v3.1>
Tracks up to 21 satellites simultaneously, either in simulation or real-time mode. Text screen displays ground-track coordinates, range, mean anomaly, visibility (azimuth and elevation) and Doppler shift frequency information for all satellites being tracked. Graphical screen portrays the satellite ground tracks superimposed on a world map. Polar plot displays graphically the precise location of each visible satellite above the observer's horizon. Developed by the Geodetic Research Laboratory of the University of New Brunswick. Available from Richard B. Langley, R.R. 12, Fredericton, N.B. E3B 6H7, Canada (Internet: lang@unb.ca). A demo version of MacSat may be ftp'ed from directory PUB.CANSPACE on unbmvs1.csd.unb.ca.

System 7

<OrbiTrack> <OrbiTrackFPU v2.1.4>
Calculates look angles to selected satellites, plots current satellite positions on a world map, and displays the visible passage of a satellite against background stars (either within the program itself or via a data file that can be read into the Voyager astronomy program). Please note that one version requires an FPU to operate! BEK Developers, P.O. Box 47114, St. Petersburg, FL 33743. (Bill Bard, CompuServe: 75366,2557) (Note: This replaces BEK's previous MacSat program, which was not related to the program of the same name from UNB.)
System compatible

<QuikMac>
Macintosh version of N4HY's QuikTrak program. Requires Microsoft BASIC. AMSAT, P.O. Box 27, Washington, DC 20044.

<Satellite Orbit Prediction Program>
Macintosh conversion of W3IWI program. Requires Microsoft BASIC. Send formatted 800K Macintosh disk with stamped, self-addressed disk mailer to Earl Skelton, N3ES, 6311 29th Place NW, Washington, DC 20015. Or send self-addressed stamped envelope for source listing.

<Satellite Pro>
Uses world maps and tables to indicate rising and setting schedules, current locations, mutual visibility opportunities, and footprints. Includes Mercator, polar, and great-circle displays. Optional antenna control. MacTrak Software, P.O. Box 1590, Port Orchard, WA 98366.

<MacSPOC>
Author is on AOL and can be reached as adamod@aol.com via the internet.

*** Antenna design ***
<MacMiniNEC>
Chris Smolinski, N3JLY, 40 South Lake Way, Reisterstown, MD 21136.

*** Radio control ***
<ICOM Radio Control>
Provides a Macintosh interface for controlling ICOM transceivers that use the CI-V remote-control system. Lets you quickly change frequencies and modes. Also does logging and duping. Requires a CI-V to RS-422 converter (schematic included with program).
KE6FG Software, 9763 Pali Avenue, Tujunga, CA 91042.

<FreqValet>
Provides frequencies and DX program info for shortwave radio listeners. The program databases update automatically at 15, 30, or 60 minute intervals, thus providing a continuous display of broadcasts on-the-air at any given time in a spreadsheet like format. Features include sorting of data, scanning, and on-screen changing of databases. The program will convert Tom Sundstrom's dBase shorwave broadcast listing to FreqValet format and will do the same for Shorwave Navigator users. Separate cards are provided for DX Programs, Ship to Shore, and Utility broadcasts. Computer control modules are available at extra cost for the Drake R8, Kenwood R-5000, JRC NRD-525, and NRD-535 receivers.
DX Computing, 232 Squaw Creek Road, Willow Park, TX 76087. Telephone (817) 441-9188 or (817) 441-5555 (fax). Author is available via internet: dxcomp@aol.com System 7 with

HyperCard 2.1

*** Ham radio BBSs ***
<Digikron Systems BBS>
Various ham-related applications, including logging, propagation, Morse code, and packet. (408) 253-1309.

<N8EMR BBS>
Various ham-related files, including packet, DXing, and contesting software; AMSAT bulletins; and several ham newsletters. (614) 895-2553. Also available via FTP on AMPRnet at 44.70.0.1.

<WB3FFV BBS>
Various ham-related software, including packet, contesting, and Morse code applications. (410) 661-2475, 661-2598, and 661-2648.

<ChowdaNet BBS>
(more info at a later date)

<

*** Online Services carrying Ham Radio software ***
<America Online>
Supports Macintosh, PC's DOS & Windows versions, PS/1, Apple //s, Casio Zoomer. Ham Radio Club (keyword = ham radio) supports all computer types. Software for amateur radio, scanners, swl'ers and general electronics. For 10 FREE hours of trial time send your snail mail address to tstader@aol.com or call 1-800-827-6364 Ext. 6285. This site NOT ftp'able (yet). Internet e-mail.

<CompuServe>
Supports any communications software on most computers Ham Radio area (go hamnet) supports all types of communications formats.
Call 1-800-848-8199 for information. This site NOT ftp'able. Internet e-mail.

<Delphi>
(more info at a later date) Internet e-mail

<GEnie>
(more info at a later date) Internet e-mail

<Prodigy>
Has ham radio message areas, no downloadable software. Limited internet e-mail.

Worse even than the fact they were unelected, they were unqualified to make
the decisions in the first place...

>followed by attempts to impose them on everyone, often using FCC rulemakings
>as a lever to enforce ARRL "leadership" will.

Yup.

>I don't know if the "League" is up to the task, if by "League" you mean
>the staff in Newington or the Board of Directors, but the ARRL is some
>260,000 people, slightly less than half of all US amateurs.

Of which most could care less about what we're talking about...

This is the real rub of spectrum management. It's a difficult job made more
difficult by apathy and ignorance. Most hams just want to talk on the radio,
not get involved with problem solving. It's easier to bitch than switch.

>That requires
>some national body to *arbitrate* (not rule from Olympus) the inevitable
>disputes.

...and to accept the responsibility when they're sued. Any decent plan for
real spectrum management must be backed up by the FCC formally recognizing
the process. Unless the teeth of the FCC are ready for the people who will
sue the spectrum managers, this will only be a pipe dream.

That role may fall, by default, to the ARRL's elected officials,
>if they're up to it.

As dreadful a thought as this is, I believe the ARRL is the only organization
who CAN do it. This is simply because they claim as members a very large
percentage of licensed hams. I don't think they're up to it, but if they try,
I'm willing to help...unless they make the decision in the dark, as they have
in the past.

Sure, instant stuff is a little bit crazy idea - BUT what the ARRL did
for speeding things up to say resonable 4 weeks maximum? Why you can get
your drivers license in 10 minutes - and wait for a plasitc copy for
4 months after that - no problems. Give a pools of callsignes to VECs -
and let them give you the callsign as soon as you pass - then get a
copy of a license (why not in plastic though?) in a few months after that.
That's just 2c - but something has to be done.
Vassili, N2WID.

A coordinated repeater has de facto ownership or control of a given frequency...

>2. Nobody has indicated that amateurs cannot operate on repeater input
> or output frequencies, even if the repeater is considered "closed".

Everyone who thinks operating simplex on the output frequency of a nearby repeater is good operating practice, raise his hand! Let's not be silly, shall we?

>3. I, and others, have indicated that if someone opts for #2, however,
> they have to insure that they do not interfere with the repeater on
> those frequencies.

Okay, the repeater doesn't 'own' the frequency; it just dominates it and has priority (i.e. it comes on, you go off). There, you now have another word than 'own.' Happy?

>4. "Coordination" is a status which can be granted, taken away, or lost.

Even under reductio ad absurdium, this doesn't seem to work. After all,
the public has expressed its will, once again by Act of Congress, that
amateurs shall be restricted to certain bands.
>
>> ...and you can salvage the site, the single most valuable commodity.

>This is a value judgement. Around here, sites are a dime a dozen.

The site is none-the-less the single most significant factor in determining
system performance. If you want to set up a system with similar coverage
to the old one, using the same site is a step in the proper direction.

There was a case in California where a ham with CAP/MARS capability on
his HT called - after attempting to get help on ham band - for aid on a police
frequency. His companion was badly injured due to a fall, and he was in a
remote area. The ham had his radio confiscated by the police in conjunction
with the FCC. I found the idea that the ham was being punished for
attempting to save a life totally uncalled for, and legislation recognizing
special circumstances where a radio operator could use "unauthorized" bands
without worrying about being subjected to harrasment later, would be very
helpful.

>I knew the Defender of Radio Lawbreakers would eventually surface. You
>came to Bly's defense in December when he bragged about operating
>without a license, and now in June Bly resurfaces and so do you.

Hmmm, I re-read my message and I think it is clear I was trying to defend
the law abiding amateurs of southern California from unfair criticism.
Did I at any point defend the actions or statements of Bly? I think not.

>I will continue to publicly condemn those who intentionally break the law;
>if you choose to hid your head or deride me then you, in effect, are indirectly
>condoning their behavior. I'm very secure and very happy but I won't let
>that stop me from condemning someone who does wrong. I'm sure that
>you scold your children when then do wrong; does that make you an `insecure,
>unhappy' person?

When my daughter mis-behaves, I don't condemn all the children in my
neighborhood. When the kid down the street was selling methamphetamine,
I didn't condemn all the teenagers in my neighborhood. You see, it wouldn't
be fair, would it?

Anyway, to defend the law abiding amateurs of SoCal suggests that I condone
their actions, and I do. I do condone law abiding amateurs.

Now, Jeff, do *really* think I condone illegal activities?

>Now, concerning HF CW, to the uninitiated, DX pileups might sound as if
>everyone is jamming one another but there is a sense of order in all
>those hetrodyne squeals. Music to my ears!

Maybe, but the people holding the dit paddle down and tuning up and down don't
sound pleasant to me. Or, the constant "dit-dah-dit-dha" of squeezed paddles
may be rythmic, but doesn't belong on amateur radio.

>A CW station jamming a SSB net? Is it possible the net started right on
>top of a CW QSO? You would had to have been parked on that freq prior
>to the start of the net to conclusively call it jamming. It's possible
>that the two CW stations were trying to continue their QSO under the
>SSB net (maybe it was even a CW net that was there first).

Hmm, repeatedly sending "FU FU FU" sounds like jamming to me. The likelihood that a CW QSO was in progress on 7255kHz is pretty remote, and still doesn't justify unidentified transmissions, use of foul language, or intentional malicious interference.

Are you suggesting that the use of CW makes these practices *not* jamming? ;-)

Source record: 265491
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

OK, I've seen the SAME bits of information go around and around
and around..... My summary:

1) All repeaters are CLOSED. The FCC has said so, and the
new Form 610 says so also. YOU MUST PREVENT UNAUTHORIZED
PERSONS FROM ACCESS. So, putting up a repeater and not controlling
what goes on is or will soon be possibly in violation.

2) What is important is the definition of OPEN vs. CLOSED.
"OPEN" just means that the trustee has in effect given prima
facie carte blanche permission for any operator to use the
equipment. CLOSED means that the trustee would like to exercise
some control over who uses the equipment. Given (1) above,
it would seem that "OPEN" repeaters are on the way out.

3) Licensed amateurs may operate their equipment in
on any frequency, subject to the restrictions of Part 97,
specifically 97.301, 97.305 and related sections. This means
that you may use the input and output of the repeater for
your own purpose PROVIDED you don't cause harmful interference
with the repeater.

4) The trustee has the right to limit use of the repeater as
he/she deems necessary. "....Limiting the use of a repeater
to only certain user stations is permissible." (97.205e)
This extends to different classes of access -- allowing
general phone use, but restricting autopatch to a select
few, etc.

5) You may put up a repeater in any part of the amateur
spectrum within the restrictions of 97.205. However, if you
cause interference to another repeater, and you are not
coordinated, the regulations place PRIMARY responsibility
on the uncoordinated repeater.

6) The frequency COORDINATOR cannot make any judgements
as to whether one repeater is "better" than another.
He/she can only help determine whether a proposed installation will
cause harmful interference. Remember, it is the trustee's
responsibility to minimize interference. The ID of
the repeater and responsibility of Part 97 belongs with
the trustee -- you don't hear the call of the coordinator going
over the repeater, do you?

7) Spectrum management is a different issue from coordination.
Coordinators work within the guidelines of the spectrum management
group. 97.101b states that amateurs are responsible for
working with each other to maximize the effective use of
amateur frequencies. Thus, amateurs as a whole have
the power to determine frequency use (band plan) within
the specific rules in Part 97. This means that if amateurs
in a given area as whole wish to redefine use of spectrum,
it appears that the rules allow it, provided they agree.

8) There is plenty of spectrum in 1280 MHZ band, even
in SoCal. Population of the upper bands is desirable so
that we as amateurs don't lose more spectrum. Watch what
is going on in 2400.

9) "Paper" repeaters are a problem with the coordinating body.
A good coordinating body should have a mechanism to determine
inactive repeaters and a formal procedure to de-coordinate them.
If the problem is with "paper" repeaters, then the coordinating
body needs to do something about it. This is DIFFERENT than
a closed repeater.

My two cents....

-Ken

To all radio amateurs

SB QST ARL ARLB050
ARLB050 Atlantic Division awards

Atlantic Division awards

The ARRL Atlantic Division ''Amateur of the Year'' for 1994 is Bob Bennett, W3WCQ, of Towson, Maryland. Among his many contributions to Amateur Radio, Bennett, 58, co-anchors the ''Answer Man Net'' on the Baltimore Amateur TV Society repeater.

After serving for nearly 10 years as the Atlantic Division representative to the ARRL UHF/VHF Advisory Committee, in 1993 Bennett was named chairman of the new ARRL Spectrum Committee.

The Division's Technical Achievement award was won jointly by Bill Ferguson, WA3BXW, of Bristol, Pennsylvania, and Charles ''Jim'' Smith, K3ATI, of Newportville, Pennsylvania.

And the ''Grand Ole Ham'' is 94-year-old Dean Wallace, K2ANM, of Herkimer, New York. Dean was first licensed in 1919, as 8AAF.

The awards were announced at the ARRL Atlantic Division Convention, held in conjunction with the Rochester (New York) Hamfest, on May 21, 1994.

>band transmitter on the ham bands and about how he didn't care about the
>FCC rules, etc. - I scolded him - Dana came to his defense.

The fellow that suggested he was going to move a 5KW transmitter over to
the amateur bands did not say he was going to operate the transmitter at
the 5KW level. Nonetheless, Jeff attacked him and I said "but he didn't
say he was going to break the law" and then Jeff decided I was a lawbreaker.
As I recall, after Jeff's attack, the amateur with the 5KW transmitter
said he intends to operate it legally.

>2. Bly bragged about how easy it is to operate in SoCal without a license
>and that he'd done it for years - I scolded him - Dana came to his defense.

Yeah, I said something like "just cause Bly said he did it, doesn't mean he
did, we just don't know on the Internet". I recall it was part of a train of
thought on my part suggesting that Jeff ought to ignore Bly's posts, since
they are similar to a radio jammer. They tend to go away if you ignore them.

>3. Someone was inviting pirates to use 6 Mc air-to-ground frequencies - I
>argued with him about the danger of that - Dana came to his defense.

No, someone, in Europe, on rec.radio.cb, said they'd monitored CB pirates
on 6MHz. Jeff wrote a note slamming the original poster, who, for all we
know, is an SWL, and Jeff threatened to call the FCC and report the original
poster. My response was an attempt to point out that not all radio amateurs
are as uptight as this.

>4. Bly now brags about jamming closed 440 Mc repeaters - I scold him -
>Dana shows up.

Yeah, I show up to defend the VHF/UHF scene in Southern California, not Roger Bly. Did I ever defend Bly? Not on your life. Did I suggest that Bly's postings may not be indicative of reality in Southern Cal? Sure did!

I've said it before, I'll say it again:

I do *not* condone breaking the law.
I do *not* condone unwarranted personal attacks on the Usenet.
I do *not* have a history of illegal radio operation.

Probably I should treat the attacks from Jeff as I would any other malicious jamming and ignore them. ;-)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 6/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 6 JUNE AND FORECAST UP TO 9 JUNE

IPS Warning 15 was issued on 26 May and is still current.

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 071/006

1B. SOLAR FORECAST
07 June 08 June 09 June
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly unsettled, apart from active
levels 09-12UT.

Estimated Indices : A K Observed A Index 5 June
Learmonth 16 3334 3333
Fredericksburg 15 20
Planetary 18 17

Observed Kp for 5 June: 3443 3334

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 Jun 20 Unsettled to active.
08 Jun 15 Quiet to unsettled.
09 Jun 10 Quiet to unsettled.

2C. MAGNETIC COMMENT
Disturbance expected until 7 June due to a coronal hole. Activity is
not expected to exceed active levels locally for the remainder of the
disturbance period.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Jun normal fair-normal poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Jun normal fair-normal poor-fair
08 Jun normal fair-normal fair
09 Jun normal normal normal
3C. GLOBAL HF PROPAGATION COMMENT
Global HF propagation conditions are expected to improve as the
geomagnetic disturbance comes to an end.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 06 June: 35

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
07 Jun 30 Near predicted monthly values.
08 Jun 30 Near predicted monthly values.
09 Jun 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Local propagation conditions appeared fair yesterday, with regular
sporadic E layer and night-time Spread F. Similar conditions are
expected for the next two days.

3595. Ignition Noise Help Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-07 00:47:34 UTC
From: dphillips@ws07.iac.honeywell.com
Message-ID: <2t0g36$jns@adm09.iac.honeywell.com>
Source record: 265508

HELP!

I am attempting to use my HF rig mobile in my 1988 Chevy Suburban. However, I have so much ignition noise as to make it not practical on the road.

I would like some suggestions on how to eliminate ignition noise in a Chevrolet using the high power ignition system with the Throttle Body Fuel Injection system.

I have already tried the following, none of which had much effect;

1. Isolated and grounded all feed line (RG8x) shields to the body.
2. Placed split ferrite cores on primary and each secondary ignition lead.
3. Added extra copper braid shield from body pannels and hood to frame.
4. Added extra copper braid shields from engine to frame.
5. Added extra copper braid shield engine block to coil frame.
6. Shortened primary radio power lead to nearest battery connection and used shielded cable.

This sucker is still LOUD. Also, I have noted that when another vehicle of the same make and model is near, I can hear them also quite clearly in my reciever. Has anyone out there run into this problem and found a reliable method of countering it ??????????????????

: What is the impedence of a normal car antenna in the US?
: I have to couple my amplifier circuit with the car antenna.

I assume you want to use the car antenna on other than the broadcast bands. I use my car antenna ('87 Accura Legend) on 144, 220 and 440 MHz with a homebrew band-switched tuner.

The actual antenna impedance is not of much interest, since the impedance at the other end of the coax will be completely different. It will depend on the antenna length, coax length, and coax impedance. (And to a lesser extent on the antenna placement and shape of the car body.) I suggest doing what I did -- Just hook up a good VHF SWR meter and fiddle with the matching network until you get a 1:1 SWR.

: they gave me a quote of $225 to $250. It was apparent that they never
: actually opened up the set, and that the quote was based on my
: impression that it might need new finals and alignment.

Many years ago I worked briefly (a few weeks) at a stereo/TV repair shop. The owner was, IMO, a crook, if not legally then at least morally. Prices were based more on what he thought the customer was willing to pay than on what it actually cost to fix the set.

If the customer asked how long the repair would take, I was supposed to say "a week." But I knew that there were shelves full of sets waiting to be worked on in the back room. If an irate customer came in weeks later wanting to know where his equipment was, I was supposed to say "on the bench waiting for parts." (That way, the customer couldn't yank his equipment and go somewhere else.)

The owner got all his business by going through the paperwork to qualify as an authorized warrantee repair center for just about every consumer electronics vendor known to man. You see, that way he don't have to depend on repeat customers to stay in business.

The whole experience accounts for much of my lost naievte as a young man. :=)

There are a number of sources for Quad antenna diagrams, but the best
place to start is with the ARRL Antenna Book, available direct from
them, or in just about every ham store in the US.

My buddy N3MEQ approached me to help a fellow ham with a hearing problem. He likes to contest a bit, uses NA, likes CW, and wants to try a code reader. I used to have one.

Budget is limited. If you may know of a stand-alone code reader, like the Kam or AEA, or have a software/hardware solution to reading some CW on the screen while still in a contest type of mode, please let me know.

E-mail here is fine. Preferable address is penneys@pecan.cns.udel.edu.

Tnx Bob

>July 3rd, staying in College Park, and am wondering if there's
>much local ham activity - clubs etc?
> >Any info. appreciated,
>73 Simon G0GWA. >

Depends on what you mean by "local". DC and College Park sit
on the Nations Capital, lots of two, 1.25, and 3/4 meter repeaters (if
you're into VHF/UHF), lots of clubs that do other things.

Your time period goes across the ARRL sponsored "field day", an
adventure in its self. UMD has a club station I do believe, but
I dont recall its callsign.

Greater than 2 MeV Electron Fluence for 06 JUN is: 1.2E+09

SYNOPSIS OF ACTIVITY

Solar activity was low. A C2/1F flare at 06/1253UT was produced by Region 7729. Region 7729 (S16W56) was numbered today and is the only spotted region on the disk.

Solar activity forecast: solar activity is expected to be low. Region 7729 (S16W56) has a chance of producing an isolated C-class flare.

The geomagnetic field has been at unsettled to active
levels for the past 24 hours. High latitude stations
experienced some nighttime sector minor to major storm
conditions. Energetic electron flux levels (GT 2 MeV)
were at high levels throughout the period.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled at mid-latitudes and active at high-
latitudes for the first day of the forecast. Unsettled
conditions are expected for the second and third day at all
latitudes.

Event probabilities 07 jun-09 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 07 jun-09 jun

A. Middle Latitudes
Active 25/20/20
Minor Storm 20/10/10
Major-Severe Storm 10/05/05

B. High Latitudes
Active 30/35/35
Minor Storm 25/10/10
Major-Severe Storm 10/05/05

HF propagation conditions were near-normal over all
regions today. Lingering periods of minor night-sector signal
degradation can still be expected, particularly on transauroral
circuits, over the next 24 to 48 hours. Conditions should
continue to gradually improve through 09 June inclusive.

------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Actually the legal "weak ground" is a county court issuing a restraining order that pre-empts operator privileges granted by the Federal Government. Personally, I side with CLARA and hope the decision stands (I don't know if there will be an appeal, but if there is, I hope it stands).

I also hope that CLARA re"opens". I understand that they are officially closed but aren't too restrictive as to who may use the repeater. I'm not sure, though, because I haven't tried it.

Hey Michael P. Deignan (md@maxcy2.maxcy.brown.edu):
> I fail to see how their coordinated status makes a bit of difference.
> Regardless of whether or not a machine is "open" or "closed" the trustee
> has always had the right to restrict access to the machine. To suggest
> otherwise implies that you have the right to enter my home whenever you
> want and operate my HF station without my permission.

It makes a difference because they're asking an uneducated (ham-wise)
county judge to make an order barring a federally licensed radio station
operator from transmitting on frequencies assigned and permitted to that
licensee. They asked the judge to overlook that in light of the
defendant's continued use of a closed/private/restricted machine in
defiance of the owners/operators of that equipment.

In any event, this case has already been argued and CLARA won.

> I can understand why a system would want to be recoordinated as "closed".
> Proponents of "open" repeater systems seem to be under the impression
> that its their right to utilize the machine whenever they feel like it,
> regardless of what the station owner says. At least if the machine is
> coordinated as "closed" it may help convey the fact that people who are
> not wanted on the machine by the trustee should not be operating on it.

I'm a proponent of open repeater systems but I don't feel that way.
I've supported open repeater systems financially (and with my time) in
the past and I will in the future. A good open repeater fosters
goodwill. Like a big, puffy "WELCOME" mat -- an open repeater is a good
place for you to dial up when you get lost in the big city or are just
looking for a rag-chew because traffic is tied up. On the other hand, I
have never belonged to a closed repeater system. Although I could use
APCO's closed system, I never even bothered to get the frequency because
-- quite frankly -- who cares? Are my friends going to monitor it? No.

> From the FCC's perspective, it doesn't make a damn bit of difference,
> since all repeaters are closed anyway in the eyes of the FCC.

"Open" never meant that the trustee didn't have the final say as to who
uses the system. It sounds like you think that the FCC has outlawed open
repeaters.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.autos.misc

I am considering putting VHF/UHF or maybe even a portable
HF station in a 1987 Porsche 924S. Has anyone had RFI problems to
the computerized components in this vehicle, or in the 944 ('87-88 924
has 944 engine) ??

If you did have problems , what power level were you running?
Did moving the antenna help at all ?

Thanks

73

Paul Brewer
pjb@cco.caltech.edu

Scuze me for butting in here Dana,

But should we take things with a grain of salt that are said over the Internet?
I mean who in their right mind is going to blatantly brag about this kind of
stuff anyway? An imbecile?

And if someone does call the FCC what are they going to say? "Uh, I heard or
read over the Internet that Mortimer Z. Ziddlehopper is running 5kw in the
ham bands?" They'd laugh you off the phone. Your own advice to yourself
above is probably the best thing you can do. Ignore them.... I wonder why
we are so competitive via electronic media to begin with? Is it a battle of
wits or what? Do we enjoy arguing? Here I'll start one.......uh, there...
you win! Argument over.

Oh well...It's only a hobby.....only a hobby...only a hobby...

Good idea. Despite how fun it is to bait him and watch him run around in circles. After several go-rounds with him and threats to complain to my sysadmin (which never materialized) I've decided he just isn't worth the effort to slap around.

So Jeff [NH6IL], sleep well little buddy, be content to dream of your days in the Coast Guard (while making little swimming motions) and not wake up in a cold sweat anymore wondering what I'm liable to say.

I've an old ATARI MEGA ST2 computer that I use for music.

I'm searching a person can give me schematics or plan for a packet radio modem
I can self construct work on my ST and freeware or shareware software to control
this modem.

If anyone have freeware or shareware about ham radio (misc. things) let me know
the list and where I can get those.

Thank to all person,

You can mail me direct ... but I think many ham are interresting on the Internet
to these kind of software for Atari ST .... I'm not alone :-) POST A NEWS !!!!

>Rick Karlquist N6RK
>rkarlqu@scd.hp.com
I have calculated and simulated circuits which allowed that much tuning range.
Stability analysis of the results left me "unimpressed." If I wanted that much
tuning range I'd find another route to happiness unless DESPERATELY in need of
low power. (Um, a surprisingly good approach would be a SAW oscillator based
VCO and a mixer to the lower frequency. And it'd be about as stable as a 19MHz
oscillator pulled 100KHz. Analysis showed stability was more determined by the
capacitors and inductors used than the crystal once you'd be even a quarter of
the way "out there." Of course my definition of "acceptable stability" may be
much more stringent than yours. I was designing stuff for DoD type apps. {^_-})

(Of course the last RF design I did was near a dozen years ago and was a quite
different design than the sorta thing you were looking at here. How'd you like
a workable design (not schematic - just design) for a frequency synthesizer
that'd take 10MHz in and give an output between 9.999997 and 10.000003MHz
with one or two part in 10 to the 13th step size.)

From: stefanis@ptp.hp.com
Message-ID: <Cr0pGp.Iy5@cup.hp.com>
Source record: 265516

Newbee alert!! This is my first time posting here.

I'm in Singapore right now. And I was wondering, the next time I'm here, should I bring my radio? What are the laws regarding 2m and 70cm transition here. I've talked to a bunch of people here in Singapore and they have no clue. I think there is a well established radio-phone network here, so I would not be surprised to find out that HAM is not allowed.

I just want to find out before I have to find out the hard way.

3612. HAM in Singapore

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-07 08:50:27 UTC
From: oo7@astro.as.utexas.edu
Message-ID: <2t1ccj$36g@geraldo.cc.utexas.edu>
Source record: 265518

A licensed US radio amateur who had better remain anonymous asks:

>I'm in Singapore right now. And I was wondering, the next time I'm
>here, should I bring my radio? What are the laws regarding 2m and
>70cm transition [sic] here. I've talked to a bunch of people here in
>Singapore and they have no clue. I think there is a well established
>radio-phone network here, so I would not be surprised to find out that
>HAM [sic] is not allowed.

Of course HAM is allowed - at least, amateur radio is, if that
is what is meant. There are scores of amateurs there. Who did
you ask - the barman at the airport? Some kids on the street?

I am still trying to find out why people call amateur radio
"HAM" - the above poster has had a license since 1992, and
still calls it HAM (not even HAM radio). Where does this come
from? - somebody must know. And don't give me all that stuff
about Home Amateur Mechanics or whatever. I'm not asking why
radio amateurs are called hams, I want to know why amateur radio
is called simply HAM. I've only heard it in the last few years.

What gives? Somebody, please???

Grumpily,

Derek Wills (AA5BT, G3NMX)

Does anyone have a 100% sure address to obtain a QSL card from TR8CA??
I recently tried F6CBC (who was/is the QSL manager for TR8CA?) at this
address: J. Charron, 183 Ave. Carnot, F-33150 Cenon, France but I got
my card back.

Input is welcome,

Thanks, Remco PA3FYM

3614. Recommendation for 2m/440 mobile wanted

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-07 09:25:10 UTC
From: kucharsk@netcom.com
Message-ID: <kucharskCr0stz.B6u@netcom.com>
Source record: 265520

I'm looking for a smallish 2m/440 mobile radio for use on a temporary basis in my car. Basically, I want to use it as a very transient system -- cigarette lighter power, ground clip to chassis, mag mount antenna on the roof, unit Velcro(tm)ed to my car's carpet.

Possible units:

* Yaesu 5100. My current leading frontrunner, as I want dual in-band capability and don't need a detachable faceplate since the whole unit will always be coming with me.

* Kenwood 732/733. The 733 is newer and is price-comparable to the 5100, but AES has a nice price on the discontinued 732. The Kenwoods lack a backlit DTMF mic, though (it seems like it would be a nice touch at night.)

Usage will be for commuting and SKYWARN.

Basic questions on these (or other recommended units):

* Do they have in-band repeat capabilities? I know the 5100 has cross-band repeat, but could I say set up one so that I can xmit from my 2m HT to it to the 2m repeater I can't hit with my HT alone?

* Do they have built-in speakers of any type, or do I need to add an external speaker to the list?

* Do most newer units have built-in and/or defeatable antenna multiplexers (e.g. just hook up a dual band mobile antenna and go)?

Please reply via email, and I'll summarize if there's interest. Please feel free to tell me if my proposed system won't work as well.

Subject: Re: Plans for Building a Quad

Anibal,
Get Bill Orr's quad book. You'll need it to do a good job. Quads do provide more gain than yagis but only 2db or so. That's not a lot difference. The problem with quads is that they are mechanically weak. Get any ice, wind, or just age and you'll have to restring the quad (often). The yagi is a better performer year after year!!
Good DX,
K5WIM

It should be very interesting to see what happens with Radio Shack now entering the general electronic repair business. I worked at an RS center for six years, we went through a TON of electronic techs in that time too because RS paid minimum wage... BUT, the techs got a "commission" on the LABOR ONLY of each repair. It was an incredible incentive and every tech that lasted was absolutely top-notch (otherwise you'd STARVE). I should also mention that REDOS or returns FOR ANY REASON, were serviced for FREE labor! We hated that.

Of course we all got the occasional "Dog" or even a "Dog of all Dogs" as we called a device that NOBODY seemed to be able to fix. We would be forever putting them on "AWOP" awaiting on parts, just to get them off the bench, that's what the manager was there for... to kick our rears every now and then! It was a GREAT job and a lot of fun.

BTW, prior to working for RS, I was a factory tech for Marantz. It was quite humbling to go from a Marantz $30K test bench to RS with a multimeter, scope, and AF/RF generator! But money talks :-)

Webster actually lists it as a plural? May I ask what edition you are looking in?

It's probably another case of the formal rules of the English language have now changed. I know I've seen it written many times in many places, and said by many people who would know--namely those who have spent the better part of their life studying the English language (I don't knowwhy they'd do that...)--that it should *never* be used as a plural. Thus 1990's is a possesive of a single year, and 1990s means the entire decade.

TIME OUT for a correction! Gary, you don't usually misquote the rules, you must need another cup of coffee this morning; a stronger cup at the very least!

The FCC says (97.205c) that "Where the transmissions of a repeater cause harmful interference to another repeater, the two station licensees are equally and fully responsible for resolving the interference, UNLESS (emphasis mine) the operation of one station is recommended by a frequency coordinator and the other station is not. In that case, the licensee of the non-coordinated repeater has primary responsibility to resolve the interference."

The Commission most definitely does NOT say that there can be only repeater on a channel. If your claim was actually the case, the FCC wouldn't have needed to put 97.205c in the rules at all. Quite the contrary, 97.101b specifically disallows the assignment of any frequency for the exclusive use of any licensee. Most coordinating groups seem to ignore that provision, the result being this entire Mobius thread of discussion!

The "priority" is given only to interference BETWEEN REPEATERS, not other stations accessing the subject repeaters. This is probably because some few users of one or the other might be either antagonistic and pig-headed or totally uneducated in the ways of tone coded access and channel sharing. The first is deliberate, malicious interference (97.101d) and the second comes generally under 97.101a. Either way it is the operator of the accessing station, not the repeater trustee, who needs some adjusting.

****

DUAL BAND HT 4SALE

****

Have 1 DJ-580T, ALINCO RADIO 4$ALE, w/ ACCESSORIES. This is a
nice

little HT, I have one of my own. The HT is barely 1 Month old and

like NEW.

If you buy NEW(with NO ACCESSORIES) it'll cost you just under
$420,

depending on where you live and what ur sales tax is.

Selling this radio for $335.00 + Shipping with a few accessories:

* MICROPHONE

* PLUG IN LIGHTER ADAPTER

* RADIO CASE

If intersted, let me know... ASAP...

73 - Dave!

3628. List of U.S. counties wanted

Hi,

I am looking for a machine readable list of all 3000 or so
U.S. counties. I would like to keep track of contacts on the
computer. If you have such a list and could send me a copy
I would appreciate it. If there is a ftp site that I can go
to to get the list that would be good too,

Thanks.

As I said before, WHICH EDITION? We could have different editions.

Besides, just because it is in under the definition of the word soes *not* mean it is an appropritate usage of an appostraphe. Every style handbook I have every seen--and they are the ones to tell you how to use an apostrophe, not the dictionary--says it is not to be used that way. Many also note than many people do use it for plurals, but this is not correct.

I will not argue with what your dictionary says, but I still maintain that it is not correct, and that the dictionary is not the place to look, anyway.

After all this I find it interesting that no one has demanded that ALL if not a much greater number of 2-meter repeaters be made open due to the scarcity of available spectrum in that band in So. California. There's much less bandwidth in the 2-meter band that in the 70 cm band, after all. So why is everyone steamed about 440 MHz and not 146 MHz? There's gotta be more 2m rigs in So. Cal. than 70 cm rigs.

Not to pick on the guy, (I actually agree with him and his intentions...) but In INFO-HAMS #638 Gary Coffman, KE4ZV writes:

>No one is forced to become a repeater licensee, so no one is forced
>to expend any funds or labor for someone else's benefit. Repeater
>operation depends on usage of a public resource.

Not everyone that wants to put up a repeater where they want, on what band they want, with what coverage they desire, is going to be able from an available spectrum standpoint.

In the case of Wyoming at least, the spectrum is available to put up many more repeaters than there are repeater users (this added to lend perspective to the discussion). Everyone can have their own machine even if its just for ego. Most of the UHF machines are pretty quiet.

Gary continues:
> It's incumbent on
>such operators to offer an easement to allow all owners of the resource
>access to it. That's common law. You can't legally put a gate across
>a public road and start charging tolls, or denying access altogether.

I can cite two examples where roads built and maintained with taxpayer money cannot be crossed to gain access to a combination of state, BLM, and US Forest Service land surrounded by private land because the private landowners allowed the roads to be built if and only if the roads were used by the county and state for official business with NO access afforded to the general public, all quite legal (and already contested in court so I hear).

And some parting shots to close:

I have actually been approached be a person telling me I had to make an open repeater for which I am the trustee, a closed repeater, because it was privately owned. Besides, they desired it to be closed. It's still open, transients welcome, 449.075 -.

I also encountered another individual that practically demanded that all repeaters be club owned, sponsered, operated, ruled, subjugated, whatever. Private repeaters (whether closed or open) were an affront to any and all civilized human beings.

With all that in mind, it seems that for So. Cal., the only productive thing to do is to stop lamenting the 146/440 reality and find spectrum in one of the higher bands for a repeater lest the lament take on the appearance of a whine. There's too much inertia to change current policies and realities and not enough hours in a day...

In my opinion the comparison does not hold. An engineer works typically for
a company and they can interview and test the engineer before hiring them.
A physician works with individual patients. An individial patient does
rarely have the skills or the time to interview a physician wether he knows
any medicine or not.

Here's a long shot, but hopefully...

Has anyone out there in the HAM radio world ever come across, or is currently in possession of a "Kate Blevis Crystal"? My grandparents manufactured crystals (in Canada) for radio tuners during the second world war and I met some people who have seen them before. If you have any information, could you please reply via email to me.

Thanks in advance,
Mark

Singapore has harsh penalties for causing QRM outside the band.
Although the laws are arcane, you need to be sure to lash down any
stray oscillations so that they are whipped. Save yourself a lot of
pain, and don't get a scar on your HAM. These laws apply whether you
use the Mike or if you use a straight cane.

73,
Dave, KZ1O

p.s. You should contact the ARRL about reciprocal operation - they
have an information packet dealing this. Many of the folks from the
League regularly lurk here.

>

Let's miss the point completely, shall we?

The contents of the greeting "73" are already plural.
It means "best wishes" and not "best wish."
One doesn't pluralize a plural expression.
Does "best wisheses" sound correct to you?

[For that matter one doesn't add a superlative to
a superlative, as in "most unique," since "unique"
is already a superlative. But I digress.]

More to the point is the abominable quality of writing
among the technical population, although I suspect
the population as a whole is even more grammatically incompetent.

I leave you with the real problem of the "plural apostrophe"
as seen in many a posting to the net:

"radio's"
"antenna's"
"Elmer's"

and so on.

3644. Digest of Articles - QST Dec 93 (Long - 43k)

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-07 21:31:56 UTC
From: wvanho@infinet.com
Message-ID: <2t2p0c$ep@rigel.infinet.com>
Source record: 265401
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

DIGEST OF ARTICLES -- QST December, 1993

Following are digests of articles printed in the December, 1993 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. Subsequent issues will be posted one per week until they "catch up" to the current date in mid-1994, thereafter monthly.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1Taking the Mystery Out of Diode Double-Balanced Mixers
Author>Joshi, Shankar
Source>QST Dec 93, pp. 32-35
Abstract>Description of double-balanced and double-double-balanced diode mixers, their advantages, and how they are used. Also a review of representative available integrated-circuit mixers usable at frequencies up to 35 GHz.

Digest>Mixers are commonly used in radio equipment to convert signals from one band of frequencies to another through heterodyning. A simple mixer in a superheterodyne receiver accepts an input signal and a local-oscillator signal; its output is an intermediate-frequency (i.f.) signal. But this output also includes the original two input signals, plus various harmonics and beat frequencies.

The local-oscillator signal is the highest amplitude of any signal present. For this reason, the balanced-mixer was developed to balance it out. The double-balanced mixer takes it one step further and also balances out the original signal input. Consequently, to a first-order approximation, the output of a double-balanced mixer is the i.f. signal only. Actually, all the other, unwanted, signals are still present but reduced by orders of magnitude.

In this article, Mr. Joshi explains the design and application of the most advanced types of double-balanced mixers available today. The heart of the DBM is a diode ring, or bridge circuit, comprised of four Schottky diodes formed in a single integrated circuit. The input and local-oscillator signals are both applied in balanced form, each taken from the secondary of a center-tapped ferrite toroidal transformer. The output of the circuit is typically taken between the center taps of the two input transformers, in unbalanced form.

The author describes the characteristics of each of the major components in considerable detail. A table lists the parameters of ten representative types of Schottky diodes which are rated for operation at maximum frequencies that range from 4 GHz. to 35 GHz, depending upon model number!

He further describes the double-double-balanced mixer (DDBM). Thus is a circuit that takes the balancing process another step. It uses two Schottky quad-diode rings, each fed by a pair of toroidal transformers. It tends to balance out the distortion products even more thoroughly than the single DBM. It also offers better signal-handling capabilities and higher isolation between the inputs and the output.

DBMs are available as either discrete components or packaged complete circuits including transformers, as well as ring diodes, in single cans.

Title>TA2:Measuring and Compensating Oscillator Frequency Drift
Author>Hayward, Wes - W7ZOI
Source>QST Dec 93, pp. 37-41
Abstract>A description of a controlled temperature chamber and its use

in determining the frequency vs. temperature characteristic of oscillators. Also describes temperature compensation circuits and how to adjust them using the chamber.

Digest>In this day when much amateur radio gear uses synthesized frequency determination, there is still a place for analog oscillators of the time-honored Hartley, Colpitts, and other classic designs. All of these show some amount of frequency drift, primarily due to temperature changes. The author describes the construction of a simple controlled-temperature chamber that can be used to measure the temperature-versus-frequency characteristic of oscillators. By using it, one can design and insert temperature compensation into the oscillator circuit.

The author built his temperature chamber out of flake-board and styrofoam. For a heating element, he uses a light bulb. A thermometer continuously measures the inside temperature. Also included is an exhaust fan that can be used to exhaust hot air and draw in outside air when rapid cooling is desired. He suggests that another fan be placed inside the chamber to stir the air and insure that the temperature is uniform throughout.

Mr. Hayward describes his experiences in measuring and developing temperature-compensation circuitry for two oscillators. His recommended approach is that first, every attempt be made to make the frequency-determining components, especially the coil and capacitor of the oscillator tank circuit, to be as thermally stable as possible. Then, when the exact relationship between temperature and frequency is experimentally established, a capacitor with a negative temperature-coefficient can be used to offset the measured drift and reduce it nearly to zero. He shows how the required size of such a capacitor is calculated.

In his final summary, the author concludes: "You can have 'rock stable' oscillators if you're willing to build and apply some simple measurement gear".

Title>TA3:Computer-Controlled Electronic Test Equipment - Part 1
Author>Portugal, Ron
Source>QST Dec 93, pp. 42-50
Abstract>First installment of construction articles for computer-based bench instruments. This one covers the microprocessor board that will be used as the base for the instruments to come.

Digest>Most hams today seem to have computers in their shacks, or are contemplating them. They are frequently used for keeping logs, filling out QSL cards, and for operating in the ham digital modes: RTTY, Packet, PACTOR, etc. This article adds one more use for the station computer. It can be used as a control center for test equipment. As such, it will operate as the power supply, provide the control logic, record the data, display the results either as numbers or graphs, and provide a base on

which relatively inexpensive, very effective bench equipment can be home-built.

In this first installment, Mr. Portugal describes, and provides construction details for, building the microprocessor board that will become the first building block of the array of test instruments. It utilizes a Zilog Z-8671 microcomputer chip. That chip contains an RS-232 serial port in addition to its general purpose central processing unit (CPU). All communications between it and the main computer are through the RS-232 port.

The Zilog chip is designed for use as a controller and is popular because of its ease of use. All programming is done in the Basic language. Many of its functions are preprogrammed when the chip is manufactured.

The author plans, in future installments, to give full construction details for building the following items:

1. Completely monitored, triple-section power supply.
2. Inductance/capacitance (L/C) meter.
3. 1-Hz. to 10-MHz. frequency-synthesized sine/square-wave generator.
4. 500-MHz. frequency counter.
5. Provision for additional instruments to be added in the future.

He indicates that all of these pieces of equipment can be built for costs ranging from $50.00 to $150.00 each.

A complete kit of parts for the microcomputer board, also including the Zilog Technical Manual, is available from Ronald J. Portugal, 52 Susan Lane, North Haven, CT 06473 for $150.00 plus $4.00 for domestic shipping.

Title>TA4:An Automated Mobile Radio-Direction-Finding System
Author>Flanagan, Robert H. - KA1RBH and Calabrese, Louis A., Jr. - N1LZD
Source>QST Dec 93, pp. 51-55
Abstract>Describes an automated RDF system built into an automobile. It calculates bearings automatically. The only human action required to find a hidden transmitter is to plot the bearings on an accurate map.

Digest>The authors describe a very sophisticated radio-direction-finding (RDF) system built into an automobile. They state that such a system "currently costs well into four figures...." so is not for widespread amateur use, but it is described for general background information.

The system is assembled from a number of components, each of which represents a recent development in technology. The bearing of a radio signal in relation to the body of the vehicle is measured by a Doppler

RDF unit that uses four vertical quarter-wave antennas mounted on the roof.

To convert the relative bearing to a true compass bearing requires that the heading of the vehicle be measured accurately. This is done using a flux-gate compass. Then the absolute location of the vehicle must be known and located on a detailed map. The precise location is measured by a global-positioning system (GPS) receiver. This is the satellite-based measuring system that was developed by the U.S. Defense Department and has only recently been released for civilian use.

Finally, bearings taken from the vehicle at two or more locations must be plotted in relation to an accurate map to determine the location of the transmitter being sought. This is done on a laptop computer that automatically locates the intersection of two or more bearings in relation to the United States Geodetic Survey (USGS) Universal Transverse Mercator (UTM) grid. That grid covers the entire U.S. with squares, 1 km. on a side, which are plotted on very detailed topographical maps.

Once the computer shows the exact location of the transmitter in relation to the grid, it is easy to find it on the appropriate USGS map. The computer program that accepts the data from the RDF unit, the compass, and the GPS receiver, processes them, and displays the bearings on a grid, was written by the authors. Copies are available from Mr. Flanagan, KA1RBH.

One practical problem that the authors had to overcome in the operation of the system was the fact that signals are received not only directly from the transmitter but also by reflection from buildings, cars, metal poles, and a myriad of other objects common in residential areas. The system must sort out the direct signals and ignore the reflected ones.

In order to eliminate most of the stray signals, the program accumulates bearings for one minute at a time, selects the angle from which the largest number of bearings was detected, and rejects any that were more than 15-degrees from that angle. Then it averages all the bearings within that angle to report the most probable direct bearing. As the car moves, more and more bearings are calculated and, as the vehicle gets closer, the uncertainty of position becomes smaller and smaller.

The authors describe two improvements that they would like to add to the system. First, it would be a great convenience to be able to display a highly detailed map on the computer screen with the grid squares and plotted bearings superimposed so that they could dispense with the cumbersome paper maps.

Second, they are considering using packet radio to interconnect all the "hunters" in a foxhunt so that all participants would have the benefit of the bearings taken by the others. The result would be: "Working as a group, we could watch our bearings zeroing in as our screen display is updated automatically. Even the fox could get in on the action and

watch our progress!" They did not address the question of whether this would defeat the purpose of the foxhunt!

The authors report that they have utilized their automated system in several foxhunts and have found it to be a "great tool" because it is "fast, accurate, and allows the operator to concentrate on other activities, such as driving and picking the next location for a bearing."

PRODUCT REVIEW (PR)
conductor: Mark Wilson, AA2Z
Editor, QST

Title>PR1:The Ten-Tec Scout Model 555 MF/HF Transceiver
Author>Newkirk, David - WJ1Z
Source>QST Dec 93, pp. 77-80
Abstract>A review of the least expensive, nearly full-function HF transceiver now on the market.

Digest>The Ten-Tec Scout is a highly innovative new transceiver that offers good performance on all bands from 1.8 to 29.0 MHz. It features 50-watts output, very small size, a built-in keyer, and an ultra-low price!

One of the ways that Ten-Tec has kept the price down involves the method of band changing. There are no bandswitch and built-in multi-band components!. Instead, a separate module for each band must be plugged into a front- panel receptacle. The listed price of $495.00 is actually for a single-band receiver; each additional band requires the purchase of a module for $25.00.

Reminiscent of the famous National HRO receivers of 40 or more years ago, the plug-in modules can be considered either an advantage or a drawback, depending upon one's point of view. For one thing, buyers do not have to pay for bands they do not intend to use. Also, one can make an argument that plug-in coils can be more efficient than the bandswitched variety. On the other hand, if one buys a full complement of 8 extra plug-in modules, the additional $200.00 makes a total price not far below that of competitive rigs.

In the process of keeping both the physical size and also the price small, Ten-Tec has made some compromises. For one thing, the frequency-determining circuit is a permeability-tuned oscillator, not a synthesizer. Like all oscillators, this one is subject to some drift as well as step changes caused by physical jarring. But the drift is not a big problem, for two reasons: First, the rig contains a frequency counter that displays the actual frequency; and second, the frequency-counting software detects the drift and counters it automatically! These compensating actions are not instantaneous, however, and both the operators and others in QSO with them can detect

the frequency changes as they occur.

The Scout's small front panel contains only 5 knobs: tuning, audio gain, i.f. bandwidth, offset tuning (RIT), and microphone gain. In addition, there are three switches, two jacks, a four-digit frequency display, 1 LED indicator, and a meter.

The switches are: (1) a 3-position Tune-Off-Noise Blanker. In the Tune position, the transmitter emits a low-power signal (CW) for antenna adjustment. The Noise Blanker activates the impulse-noise limiter circuit. (2) Speed-Off-RIT. In the Speed position, it allows one to adjust the speed of the internal keyer upward or downward by pressing the dot or dash paddles; the RIT position turns on the receiver offset tuning. (3) Power (on-off).

The two jacks are for a microphone and for audio output to speaker or headphones. The meter displays signal strength while receiving, and either output or SWR while transmitting. The single LED indicator, "ALC", indicates when the automatic level control is operating during transmission.

During single-sideband operation, the appropriate sideband is selected automatically by the band module in use. It is not possible to reverse sidebands.

The reviewer operated the rig and paid special attention to the receiver, since it is in the receive function that most inexpensive transceivers show their limitations. He was pleasantly surprised at the Scout's performance. It uses a single i.f. at 6144 KHz., so image rejection is not as complete as with the latest top-of-the-line transceivers, but the images are unlikely to cause any real problem except under unusual operating conditions.

I.f. filtering is done by multiple-crystal filters. On CW, the reviewer found the selectivity to be "acceptably good - it suitably knocks down the CW audio image even with i.f. bandwidth at its widest setting".

In transmitting, on CW the keying is excellent and the rig always operates full break-in. Its switching time is fast enough even for AMTOR operation. On SSB, its audio is good.

The AGC operation is a compromise between SSB and CW; it uses a fast attack and slow decay. The reviewer found its operation to be "first rate". His final conclusion was: "I like the Scout.... Its simple controls and straightforward operation put a minimum of mechanism between me and the stations I want to work."

Title>PR2:QST Compares Packet TNCs
Author>Ford, Steve - WB8IMY
Source>QST Dec 93, pp. 80-81
Abstract>A review of five current terminal-node controllers for packet only. Included are units built by Kantronics, DRSI, MFJ, AEA, and

PacComm, all priced between $100 and $150.

Digest>Two-meter packet is the most popular digital mode in ham radio today. There are several reasons for this. For one, the advent of "no-code" licenses means that the majority of new hams head for VHF. Anyone with a computer and a 2-meter rig, even a hand-held, can get onto Packet easily and at relatively low cost. More importantly, packet is an exciting mode. Lots of new things are happening, networks are rapidly expanding, high-speed trunk lines are criss-crossing the countryside, and digital technology naturally appeals to a great many hams.

For a ham who already has a computer and a 2-meter station, the only added equipment he needs to get onto packet is a terminal-node controller (TNC). Of course, one can use an expensive multi-mode communications processor (MCP) that provides a wide variety of operating modes in addition to packet, at a correspondingly high price. But if one is interested only in VHF packet, a late-model packet TNC can be bought for a list price ranging from about $115.00 to $150.00. This article reviews five such models now on the market.

The 5 units reviewed are the Kantronics KPC-3, the DRSI Model DPK-2, the MFJ Model 1270B, the AEA Model PK-88, and the PacComm Tiny-2 Mark II. All five of these provide the most basic features: Mailbox, KISS mode, and Host mode operations. All but the DRSI DPK-2 also provide automatic mail handling, so that one can make arrangements with their local packet bulletin-board system (PBBS) and leave the receiver on continuously. Then, any mail that is received by the PBBS will be automatically forwarded to one's own computer.

The selection between the 5 models will probably hinge on what other features besides those listed above are of interest to the buyer. Other items to be considered are: whether one is also interested in packet on the HF bands; receiving weather maps by facsimile; 100-percent compatibility with the original Tucson Amateur Packet Radio (TAPR) Model TNC-2; whether software is included; and other factors.

HINTS & KINKS (HK)
conductor: David Newkirk, WJ1Z
Sr. Asst. Technical Editor

Title>HK1:Is Your Radio Equipment REALLY Grounded?
Author>Cardwell, Martin L. - NB3T
Source>QST Dec 93, p. 85
Abstract>How to assure a low-resistance ground connection.

Digest>The writer had his common ground point in the shack grounded to a rod driven into the earth. His beam antenna was likewise connected to a ground rod at the base of the tower. In an attempt to trouble-shoot QRN, he found that there was very high resistance between the two ground

rods, indicating that either, or both, had very high contact resistance with "true ground".

To cure the problem, he replaced his old ground rods with pure copper tubing. Now he measures between 10- and 15-ohms between the two rods that are some 45-feet apart. He intends to monitor this resistance periodically to ensure that the ground connections will continue to have low resistance in the future.

Title>HK2:Audio Patch Cords and RF
Author>Swynar, Edward "Eddy" Peter, VE3CUI
Source>QST Dec 93, p. 85
Abstract>Use r.f. coax, not audio patch cords, for rf!

Digest>Mr. Swynar cautions all hams not to use audio patch cords for r.f. since the audio shield is not a good r.f. shield. Use coaxial cable designed for radio use.

Title>HK3:Tool Pouch Holds Hand-Held Transceiver
Author>Hendrey, Bill - KC6JGS
Source>QST Dec 93, p. 85
Abstract>A holster available at hardware stores just fits the ICOM IC-24AT hand-held transceiver.

Digest>Mr. Hendrey points out that a Skil holster, which is designed to hang from one's belt and carry a Skil tool, exactly fits the ICOM IC-24AT hand-held transceiver. The stock number designation of the pouch is "Twist Pouch No. 92160", available at hardware stores.

Title>HK4:How About NOT Using a 555?
Author>Newkirk, David - WJ1Z
Source>QST Dec 93, pp. 85-86
Abstract>Suggests using an LM322 or LM3905, instead of a 555, timer chip in the 10-minute timer circuit described by Conklin in HK, QST Nov 93.

Title>HK4:A Fix for Faded Blue-Green Drake Dial Lighting
Author>Ross, Arnold J. - W2NXC
Source>QST Dec 93, p. 86
Abstract>When the color fades from light bulbs, paint them with nail polish.

Digest>The writer notes that the dial lights on Drake ham equipment which are blue-green when new, fade in time. He recommends restoring the original tint by painting the bulbs with blue nail polish, Artmatic USA No. 163 Peacock Blue Nail Enamel, bought at K-Mart.

TECHNICAL CORRESPONDENCE (TC)
conductor: Paul Pagel, N1FB

Title:TC1:FAX480 Updates
Author>Taggart, Ralph - WB8DQT
Source>QST Dec 93, pp. 87-88
Abstract>Describes improved software for slow-scan TV and FAX.

Digest>This letter is of interest to hams who are involved in slow-scan TV (SSTV) and FAX video modes. The writer is the author of the FAX480 software that provides an operating program for FAX and SSTV transmission and reception.

In his letter, Mr. Taggart discusses the details of his latest upgrade, known as FAX484/FAX481P. The new upgrade improves the loading of images into memory, simplifies a manual restart, and provides a better method of overcoming problems caused by noise or QRM interrupting the reception of an image.

Title>TC2:Automobile RFI Solved
Author>Zak, Stan - K2SJO
Source>QST Dec 93, p. 88
Abstract>Toyota driver corrects RFI problem after receiving no help from the manufacturer.

Digest>The writer reports problems that developed when he installed a Kenwood VHF transceiver in his 1993 Toyota Camray. When he transmitted at full 50-watts output, a dashboard warning light indicated that the taillight had failed. He followed of Toyota's recommendations to solve the problem, without success. He finally solved it by shielding the rear-window brake-light assembly with a grounded-wire screen. The screen did not affect the brightness of the light.

Ed Hare, KA1CV, ARRL Laboratory Supervisor, appended a comment to the letter. He reports that he had contacted the Toyota Technical Department about frequent problems reported by hams who had installed transceivers in their automobiles. He was assured that transmitters running up to 100-watts should have no problems with Toyota vehicles.

The fact that Mr. Zak got no help from the manufacturer but was able to find such a simple solution to his problem shows that Toyota has not spent the engineering time required to solve such trivial problems. It seems that their assurances have little value. Mr. Hare is accumulating such reports and intends to keep pressing recalcitrant manufacturers to obtain meaningful help.

LAB NOTES (LN)
conductor: Steve Ford, WB8IMY
Asst. Technical Editor

Title>LN1:Satellite-Tracking Software
Author>Ford, Steve - WB8IMY
Source>QST Dec 93, pp. 89-90
Abstract>Describes satellite-tracking software, what it does, and how to use it.

Digest>This month, Mr. Ford has prepared, in Question and Answer format, a description of satellite-tracking programs and what they do. The function of such software is to tell the user when a particular satellite will appear above the horizon, and specify its exact postion continuously as it passes overhead. To do this, the computer must be given the latitude, longitude, and elevation above sea level of the ham station.

It also must be given the orbital elements of each satellite. Orbital elements are sets of numbers used to describe the orbit of a satellite. They can be obtained from various bulletin boards, both via telephone and packet radio. They must be updated periodically since orbits change slowly with time.

Various software packages offer different features. In many cases, they display maps that plot the satellite at all times. Some programs also provide control outputs that can be used with antenna mounts that are motorized in both azimuth and elevation to position the antenna automatically and follow the satellite as it passes overhead. The article lists the name and address of five different sources of appropriate software.

NEW HAM COMPANION (NHC)

The New Ham Companion is a regular monthly section
in QST that concentrates on articles of primary interest to
newcomers to ham radio.

Title>NHC1:The Frequency and Deviation Conspiracy
Author>Leahy, Bill - K0ZL
Source>QST Dec 93, p. 66
Abstract>Why it is necessary that FM frequency and deviation be carefully adjusted, and how to do it.

Digest>The author explains what frequency and deviation mean in frequency-modulated (FM) transmissions, how important it is that they be adjusted properly, and how to go about such adjustment. Especially when working through a repeater, it is necessary to adjust the frequency of the rig to within about 0.2-KHz. of nominal and also to adjust the deviation to a total of 5-KHz. If the repeater requires a continuous tone-coded squelch system (CTCSS) tone, then the deviation must be reduced to about 4.5 KHz. to allow for the addition of the tone.

If both frequency and deviation are not properly set, it is probable that the signal will be "chopping" in and out of the repeater because, on voice peaks, the carrier energy is outside the passband of the

repeater's receiver.

Title>NHC2:HF Mobiling - Taking it to the Streets
Author>Gold, Jeff - AC4HF
Source>QST Dec 93, pp. 67-69
Abstract>Describes operating HF mobile from an automobile and suggests some suitable equipment.

Digest>Mr. Gold describes his enthusiasm for operating mobile on the HF bands from his automobile. Then he describes a number of commercial antennas and also small-size transceivers handy for mounting in or under the dashboard. He points out that almost any kind of HF operating can be done from a vehicle, including nets, DXing, contesting, digital-mode operating, rag chewing, and QRP operating.

Title>NHC3:The Lure of the Ladder Line
Author>Ford, Steve - WB8IMY
Source>QST Dec 93, pp. 70-71
Abstract>The advantages of open-wire line for feeding a dipole.

Digest>Mr. Ford describes the advantages of feeding a multi-band dipole with balanced open-wire line, as opposed to coax. He relates his own experience when he converted from coax to 450-ohm ladder line and achieved much better performance. He largely refutes the common fears of problems arising from using open-wire line near metal.

He relates advice that he received to the effect that crossing a metal window-sill at right angles, for example, is no cause for worry so long as there is not an actual metal-to-metal contact. Also that ladder-line can be run within a few inches of even large masses of metal, such as aluminum siding, so long as a separation of a few inches is maintained.

Title>NHC4:Radio and Railfanning
Author>Clark, Brad - NP4AI
Source>QST Dec 93, pp. 72-75
Abstract>Activities of railfans and how they use ham radio in them.

Digest>There are a large number of people who call themselves railfans and are interested in all aspects of railroad operation. Most are especially interested in the historical aspects, including steam engines and any tools and equipment dating from the era of steam.

Recent laws making mobile use of radio scanners illegal to most people have led a number of railfans to earn ham radio licenses, because hams are explicitly allowed to use mobile scanning equipment. With a ham license, they can not only monitor traffic regarding rail operations but they can also use VHF/UHF HTs to keep in contact with other fans on an outing.

The author describes organized activities carried on by railfans, includes hints of how to enjoy them, and cautions against unsafe, discourteous, or illegal activities.

Title>NHC5:The Doctor is IN
Author>Various
Source>QST Dec 93, p. 76
Abstract>Questions and answers for ham newcomers.

Digest>This is a regular monthly feature in the New Ham Companion section. It is a series of questions and answers of special interest to newcomers.

In this month's column, questions discussed were ways to route the coax feedline to a 2-meter, 4-element quad antenna; DX packet clusters; radial wires used with a vertical antenna; and different types of memories used with personal computers.

RADIO TIPS (RT)

These are short items, scattered among the articles in the NEW HAM COMPANION section.

Title>RT1:The Joys of FM Simplex
Author>Ford, Steve - WB8IMY
Source>QST Dec 93, p. 75
Abstract>Long QSOs should be direct between amateurs (Simplex), not through repeaters. They should take care to avoid frequencies where they might interfere with other activities.

Digest>In this tip, the writer reminds readers that repeaters can only carry one QSO at a time, so common courtesy requires that QSOs carried by repeaters should be kept as short as possible so that others can get their chance.

If two people want to carry on a long QSO on a VHF band, they should try to do it by operating simplex, that is talking to each other directly. They should move to a frequency set aside for simplex operation where they are not likely to be bothered, or bother others.

Included in the article is a table of popular FM simplex frequencies on the 6-meter, 2-meter, 1.25-meter, and 70-cm. bands. To find other simplex frequencies, refer to the ARRL Repeater Directory which describes all VHF/UHF band plans in detail.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Heroics in the Heartland
Author>Palm, Rick - K1CE
Source>QST Dec 93, pp. 21-26
Abstract>Public service by radio amateurs during the Summer, 1993

floods.

Digest>The floods in the upper midwest during the summer of 1993 were the most widespread, long lasting, and devastating floods in the modern history of the United States. But the loss of life was relatively small. Some part of the credit for this must go to the efficiency of communications that were able to get help promptly in the many life-threatening situations that developed. Ham radio volunteers played a large role in this.

Mr. Palm has assembled an article made up of reports by ARRL Emergency Coordinators and other members of the ARRL Field Services relating the work done by ham volunteers in various parts of Kansas, Missouri, Iowa, Minnesota, Illinois, and others of the states hardest hit.

Title>GI2:A Nation Reborn
Author>Enderud, Einar - LA1EE and Wiig, Erling - LA6VM
Source>QST Dec 93, pp. 27-31
Abstract>Ham radio activities in Eritrea.

Digest>Eritrea, a new nation located near the Horn of Africa and facing the Red Sea, became independent April 27, 1993. Only a little more than a month later, four hams from Norway and one from Japan established the first Eritrean ham station, E35X. The authors were two of the hams who participated and in this article relate their experiences.

What had originally started out to be a DXpedition grew to be much more. The five visitors not only established the ham station and put it on the air for many days of intensive operation under the pressure of tremendous pileups, but also they conducted seminars on ham radio at two different places to two different groups. The first was a course of instruction in amateur radio for personnel of the Eritrean Telecommunications Authority (Telecom) and the other was for the students and faculty of the Asmara Technical School.

Finally, when the seminars were completed, they helped organize a radio club at the school, donated their equipment to it, and helped install the antennas and start up the station equipment for the club members.

During their brief stay, they had made a total of 19,600 contacts and provided a new country for nearly that many hams worldwide. They enjoyed themselves thoroughly and made many friends among the friendly and warm-hearted Eritrean people.

Title>GI3:A Cold Season
Author>Vaughan, Bruce - NR5Q
Source>QST Dec 93, pp. 56-57
Abstract>Fiction. An aged ham keeps in contact with his children by radio.

Digest>This is a fictional tale of a ham oldtimer, in his mid-70's, a widower, living alone with his dog. His children live far away and he rarely has the opportunity to enjoy them and his grandchildren. But he keeps in contact with his son who is a ham. At the end of the story, he is pleased to learn from a message received from his son, via packet, that his two grandsons have received novice licenses and will meet their grandfather on 40-meter CW the following Saturday morning.

Title>GI4:The First VHF Contest from Cuba
Author>Coro, Arne - CO2KK
Source>QST Dec 93, p. 58
Abstract>Cuban participation in the June, 1993 VHF QSO Party.

Digest>Mr. Coro and a number of other Cuban hams participated in the June, 1993 VHF QSO Party. They were pleased to find sporadic-E openings on 6-meters to the USA on Saturday, and on the following day, similar openings allowed contact with several Caribbean islands.

On 2-meters, tropospheric propagation allowed contacts with many U.S. stations in Florida. In the end, they had logged 260 stations on 6-meters in 80 grid squares. On 2-meters they made 62 contacts in 11 grid squares. The author states that news of their success spread through the rest of the Cuban ham community and many Cuban hams are now building single-sideband transverters for 6- and 2-meters, and others are making plans for UHF operations on 432- and 1096-MHz. bands.

Title>GI5:Gatti-Hallicrafters: The First Grand Ham DXpedition
Author>O'Brien, Mike - N0NLQ
Source>QST Dec 93, pp. 59-63
Abstract>A DXpedition sponsored by the Hallicrafters Company in 1947 was an enormous production.

Digest>In 1947, Attilio Gatti, an Italian explorer, convinced his friend, Bill Halligan, founder and CEO of the Hallicrafters Company, manufacturer of ham gear, to organize a ham DXpedition to go to the area of East Africa called the "Mountains of the Moon", near Lake Victoria and Mt. Kilimanjaro, in what was then Tanganyika Territory and Kenya, under British control.

The expedition was organized in a grand manner. Four special 23-foot long trailers were designed and built, one of which was outfitted as an elaborate and completely equipped ham station. As finally organized and equipped, the expedition moved in a caravan of at least eight vehicles - trucks, station wagons, and tractor-trailers - manufactured by International Harvester.

Shipped aboard a freighter, the entourage landed at a port in Kenya in January, 1948. Over the succeeding nine months, it travelled 5000 miles by land logging QSOs all the way. The total number of contacts made is not known, because the logs were somehow lost.

The article does not include any estimate of the costs involved in the expedition, but they must have been enormous. If it is true that Mr. Halligan and Hallicrafters absorbed the major part of the cost, it appears that he considered it advertising expense. He must have felt that it was reasonably successful because a few years later Hallicrafters again sponsored a DXpedition, but that time on a much smaller scale, to Clipperton Island.

Title>GI6:Ham and Former Ham Share 1993 Nobel Prize
Author>Karpf, Stephen - WJ2P
Source>QST Dec 93, p. 91
Abstract>The 1993 Nobel Prize for Physics was won by two American hams.

Digest>The 1993 Nobel Prize in Physics was awarded to two Americans, Dr. Joseph Taylor, K1JT and Dr. Russell Hulse, ex-WB2LAV. Both developed their interest in radio as hams at young ages. Dr. Taylor was originally licensed at age 13 and Dr. Hulse, also, got his license when he was a teen-ager.

Their ham activities led them to become interested in antennas, and from there they graduated to radio astronomy. Working together at the great radio telescope at Arecibo, Puerto Rico, they discovered and studied a binary pulsar. It was this discovery, and their theoretical explanations of what they observed, that earned them the prize.

None of the closed repeater systems I belong to demand dues. When
something breaks, or needs upgrading, we all pitch in and buy the thing,
or build it, or install it, or drive up the hill, or buy the beer,
or climb the tower, or whatever.

It's not a money thing, it's a cooperative thing. The systems are closed
because there are people we don't want using the equipment - HF transceiver,
remote TV camera, control/configuration for the other (open!) systems in the
building, whatever. We probably don't want to listen to them either.

We're currently experimenting with spread-spectrum, digitized speech,
high-speed data, and other such modes. Are these to be prohibited
because the pocket-rockets these appliance operators own can't do them?
Or is it only the facilities they can use that they want to co-opt?
- Brian

3648. Converting "Pocket Tone Dialer" to 16 keys

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-07 22:53:01 UTC
From: gaulandm@tekig7.pen.tek.com
Message-ID: <2t2tod$jsp@tekadm1.cse.tek.com>
Source record: 265404

I've got a Radio Shack "Pocket Tone Dialer". Of course, it only has 12 keys. Has anyone converted one to generate all 16 DTMF tones? I'd like to add a "shift" button, that, when held down, would cause the third column of keys (3/6/9/#) to generate the column 4 tones (A/B/C/D).

The one IC is labelled "UM9559E 9227G 423710", if that helps any. I haven't found any of those numbers in any of my data books, but them I'm mostly a software guy.

Thanks,
Mike

From: stefanis@ptp.hp.com
Message-ID: <Cr20q5.6GG@cup.hp.com>
Source record: 265407

Just to let you all know, I did not bring my radio with me to SGP.
I wanted to find out what the local environment was like first.
I think now that I know, I'll be leaving my HT at home.

Oh ya, I hate coffee (how un-American) and I find that Tiger Beer
is a cross between Keystone and Black Label, only not as good. :)

3650. Singapore HAM Laws?

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-08 01:16:08 UTC
From: William_A._Kirsanoff@ccmail.anatcp.rockwell.COM
Message-ID: <9405077710.AA771034801@smtpgty.anatcp.rockwell.com>
Source record: 265406

Nick Stefanisko [stefanis@hp-ptp.ptp.hp.com] writes:

Newbee alert!! This is my first time posting here.

I'm in Singapore right now. And I was wondering, the next time I'm here, should I bring my radio? What are the laws regarding 2m and 70cm transition here. I've talked to a bunch of people here in Singapore and they have no clue. I think there is a well established radio-phone network here, so I would not be surprised to find out that HAM is not allowed.

I just want to find out before I have to find out the hard way.

And I recommend:

You'll want to check with the authorities before you bring a radio in. Several of the Asian countries get a bit testy about radios that can receive their police and government frequencies. I think Singapore is one of them. Singapore does require a license (licence over there :-)) for receivers, and I am sure there will be some paperwork involved for an amateur radio license. I believe the people to contact will be the Singapore Broadcasting Corporation (SBC), they do the licensing for broadcast receivers. If that does not work, try the post office.

After you get back to the U.S., the ARRL or the Singapore Embassy could help. The embassy number is 202-667-7555.

As far as being a newbee, don't worry about it, everyone was once. And don't let Derek "Grumpy" Wills bother you, he's generally a good guy, just has a thing about HAM vs ham vs ham radio . . . :-)

One last note: isn't the coffee there great! Even Mc Donald's serves a good, strong cup that's not bitter (sigh). Can't get coffee like that here.

Views expressed in this news bulletin are not necessarily those of the Broadcast Officer, the Relay Officers, or of the Society.

Well, I hope you have tuned your rigs, checked antennas and rotators and have had plenty of sleep, or intend to do so this coming week. Because...

ANARTS WW RTTY DX Contest takes place next weekend. What better type of contest could one have at this stage of the solar cycle? RTTY will get through where other modes fail. The signal can be decoded when your ear cannot hear anything but noise, and this contest is geographically equalised. The further the distant station, the more points one can obtain. Everyone has a chance.

The trophies are worth winning too. A very nice plaque for first place -- well-received last year by the winners and well worth having on the shack brag-wall. Besides, think of all the new callsigns out there to be contacted and, perhaps, the start of a long radio friendship.

Be in it and make this contest a regular one for your calendar.

And now for the rest of the rules...

ANARTS WW RTTY/Digital DX Contest 11-12 JUNE Part 3

Contest period: from 0000Z Saturday to 0000Z Monday (48 hours)

Logs; Separate logsheets are required for each band. Logs must show: BAND, DATE and TIME (UTC), CALLSIGN, MESSAGE sent and received, NEW MULTIPLIERS and QSO POINTS. Summary sheet must

show: your callsign, name and address of operator, bands used, ponts claimed for each band, number of VK stations QSOed, total points claimed, and signature/s. Multi-op stations must contain the signatures and callsigns of each operator.

Logsheeets, summary sheets, multiplier and dupe sheets, EXCHANGE POINTS TABLE, and Band Use Chart for recording ON/OFF are all available for copying from the RTTY Contesters Guide, published by the RTTY Journal.

Logs must be received by the Contest Committee by September 1, 1994.

Mail to: Contest Manager, VK2BQS (Jim)
P.O. Box 93
Toongabbie N.S.W. 2146
Australia
(Please note that for Classification A and B one transmitter only is allowed in each case.)

IPS weekly report
---
27 May - 2 June 1994
Issue No 22 Date of issue: 3 June 1994

INDICES:
Date 27 28 29 30 31 01 02
10cm 97 70 69 69 69 68 68
A 05 21 33 35 28 24 (20 estimated)
T 25 15 10 23 17 23 18

SUMMARY OF ACTIVITY

Solar activity was very low all week.

The geomagnetic field at Learmonth (WA) was quiet to unsettled 27th-28th May; increasing to active to minor storm levels 29th-30th. The field was at unsettled to minor storm levels on 31st, reducing to unsettled to active on 1st-2nd June, with a short period of minor storm levels on 1st.

Ionospheric F2 critical frequencies at Sydney were mostly near predicted values, except for 29th and 31st May when frequencies were depressed by up to 20 per cent below predicted monthly values. Spread F was observed during local night on 30th-21st May.

FORECAST FOR THE NEXT WEEK (3 - 9 June)

SOLAR: Very low.

GEOMAGNETIC: Unsettled to active with brief minor storm periods until 7th June, and unsettled to active

thereafter.

IONOSPHERIC: Mostly near predicted monthly values, with
occasional depressions of 10-20 per cent, night-
time Spread F, and occasional Sporadic E layer.

ARLD033 DX news

The items in this week's bulletin are courtesy of Steve, W9NUF, Bill, KG4GC, George, AD1S, the Ohio/Penn DX Bulletin and the Yankee Clipper Contest Club PacketCluster network.

YEMEN. 7O1AA was worked Wednesday on 14245 kHz at 1500z.

LIBYA. A group led by JA2JPA plan to operate starting around June 10. It has been reported that equipment has been shipped to Libya and QSLs have been printed, though no call sign was mentioned. JA2JPA is currently in South America and is expected to return to Japan on June 14.

GHANA. 9G1PW was worked on 21297 kHz at 1430z. QSL via WB2YQH.

AFGHANISTAN. YA/RW6AC checked into the 14226 DX net around 2345z. No documentation has been received for this operation.

IRAQ. YI9CW has been quite active lately. Check 18074 kHz between 1400 and 1500z.

CAMBODIA. XU7VK should remain active through February 1995. Watch the usual DX frequencies.

KERGUELEN. FT5XJ has been on 20 meter SSB this past week. Listen between 14170 and 14200 kHz at around 1800z.

TONGA. Paul, KK6H, is signing A35RK. Try 14023 kHz between 0000 and 0400z, and 21024 kHz between 2100 and 2400z.

ANGOLA. D2/HB9AMO is active and should remain so through July.

FRENCH POLYNESIA. FO0MIZ is QRV until June 11 from the Marquesas. He was worked on 30 meters around 0430z. QSL via JA1HGY. FO0AKI is also active and has been worked on 40, 20 and 17 meters. Check 14195 kHz at 1100z.

SOLOMON ISLANDS. Mako, JA1OEM, is on the air as H44/JA1OEM until June 10. [heck 30 and 40 meters between 0715 and 0900z, and again from 1030 and 1430. He has also been on SSB from 1300 to 1345z between 3788 and 3798 kHz.

PACIFIC DXPEDITION. Yarl, SM6FJY, leaves Angola on June 5 to embark on his Pacific tour. The planned itinerary is as follows. Mariana Islands, KH0, June 13 to 26. Guam, KH2, June 27 to July 10. Belau, KC6, July 11 to 24. After Belau, it is back to Angola until August 18.

EGYPT. Pavel, OK2FUN, signed SU1KR during the WPX contest last weekend. QSL via OK2EC.

JORDAN. Five British and one German operator are on from Jordan until June 27. Activity is mainly on 6 meters, though some HF operating is planned. QSL JY8ED via G3SED, JY8JH via G0JHC, JY8IC via GJ4ICD, JY8OX via G3KOX, JY8VA via DL7AV and JY8ZC via G4CCZ.

MICRONESIA. Six OKDXA members will have four stations up and running from June 8 to 17. QSL V63AD, V63BC, V63FC, V63KW, V63SB and V63VA all via OKDXA, PO Box 88, Wellston OK 74881.

SOUTH KOREA. Harry, HL9HH/KJ6YR, is looking for 40 and 80 meter fills for Worked All States. He operates between 1030 and 1200z daily. On 40 meters, he operates between 7002 and 7009 kHz looking for IN, MS, NM, ND, SD, and NE. On 80 meters, he is on between 3502 and 3509 kHz, hunting IN, WI, MS, IA, ND, SD, and NE. Skeds can be arranged via email to his Internet address hherr at emh.osan.af.mil. QSL via PSC 3 Box 3695, APO AP 96266-3695.

GUANTANAMO BAY. Bill, KQ4GC, will operate from the shack of KG4DX from June 10 through 16. Possible call signs are KG4GC,

KG4WW or KG4ZZ. QSL via KQ4GC.

>knowwhy they'd do that...)--that it should *never* be used as a plural.
>Thus 1990's is a possesive of a single year, and 1990s means the entire
>decade.

You would have to excuse me, since, as a furriner, I have only
been using English for a scant 40 years. My Oxford American
(oxymoron, eh?) Dictionary, however, says:

"a.pos.tro.phe n. the sign ' used to show that letters
or numbers have been omitted (as in can't = cannot;
'05 = 1905), or showing the possessive case (the boy's
book, the boys' books), or the plurals of letters (there
are two l's in bell)." ^^^^^^^

Very best best wishes-es,

You can't blame the FCC for the Pioneer license situation; that's written into the law that governs the Pioneer licenses in the first place. So long as the companies meet the law, the FCC has to issue them the license, and free.

If you want to lay blame, blame the Congress that created the law, not the FCC for following it.

Mostly for repeaters. Actually, the 10m repeaters are a great way to
monitor for 10m openings; just program the 4 different repeater
outputs into your rigs memory (and input splits if it supports that),
and set it on the scan mode if it has one. If the band opens, you'll
start hearing repeaters from other parts of the country. I do this a
lot when I'm working in my office, and have worked folks on SC and FL
10m repeaters from Northern Virgina while the SSB portion of 10m was
"dead."

There's an article on operating in Singapore and other Far East
countries in the June 1994 WORLDRADIO magazine, if you can find or
borrow a copy. It's apparently not easy.

Of course, the first thing you need is a reciprocol license, and the
ARRL's Reciprocol License Dept. is the best source for info.

Brian,

Knowing what I know about you, none of this applies to you or your operations. No one in their right mind can say that what you do is not effective use of our bandwidth, in furtherance of the state-of-the-art.

While most of us are the users, I think we'd be crazy not to understand the need for the developers to have an undisturbed place of their own.

I'll restate my position. There are too many closed repeaters. The existing bandwidth is not being used in any example of efficiency. This conversation has opened my eyes quite a bit. While I still maintain that a conversion is necessary, there is no way that conversion can be made without careful study and cooperation. I believe that everyone can be considered, a few hundred Solomon-like decisions can be made, and the 440 MHz band considerably improved.

It's a huge job. It's time we get started, one system at a time.

NOTE: The Effective Sunspot Number for 06 JUN 94 was 12.9.
The Full Kp Indices for 06 JUN 94 are not available.
The 3-Hr Ap Indices for 06 JUN 94 are not available.
Greater than 2 MeV Electron Fluence for 07 JUN is: 6.2E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Two new regions were
numbered today as Region 7730 (S10E75) and Region 7731
(N08E83). Region 7729 (S16W69) has produced only B-class flares
during the period.

Solar activity forecast: solar activity is expected to be
very low to low through the period. The three numbered regions
on the disk have potential for producing an isolated C-class

flare.

The geomagnetic field has been at unsettled to active
levels for the past 24 hours. Some high latitudes experienced
minor to major storm levels during nighttime sectors. Energetic
electron flux levels (GT 2 MeV) were at high levels throughout
the period.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled for day one and two of the period and
active on the third day. The active conditions are forecast
due to recurrence of a coronal hole.

Event probabilities 08 jun-10 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 08 jun-10 jun

A. Middle Latitudes
Active 20/20/25
Minor Storm 10/10/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 30/30/35
Minor Storm 10/10/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
Near-normal conditions will persist until about 10 June when
another coronal-hole related disturbance is expected to begin
degrading high and polar latitude signal paths.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

The subject says it all. One of the 2M repeaters I help maintain is in need of an antenna replacement. Everyone we (technical committee) talk with says to get a Station Master type of antenna for our installation. We are replacing a Diamond that didn't survive the New England winter. The Diamond is less than 2 years old and its demise is a story for a different day. I'm seeking opinions and hopefully some answers.

We were given a Phelps-Dodge antenna. Freq tag removed. I know for a fact that it was in service at 152Mhz. The hope was to retune this antenna for use at 146Mhz. When asking around on the proper way to do this I was advised that this antenna cannot be modified because the antenna is only 20 feet long. These same people tell us we need one that is 22 feet long. Fact or fiction? Any help?

I've been offered yet another antenna, I'll have to pay for this one, that has already been in service in the amateur band. The owner thinks the model number is PD-220. Cell Wave I believe.

We've contacted a local distributor regarding the purchase of a new antenna. Cell Wave PD-200. Big bucks. Distributor says this antenna is 21 feet long. I'm also not sure I've got the model prefix correct.

Now, what is the difference between the 200 and 220? Anyone know?

So now I have reference to three different antenna lengths, 20, 21 and 22 feet. How are these lengths measured and/or specified? Radome length? Bottom of base to top of radome?

If I find a used one, what key factors should I be looking for? What can and cannot be modified? I'm looking for personal experience and opinions but please state where your comments are from in any replys. If one can be modified from the commercial service then what is the proper way to do this? What is the right way to take one of these babies apart? The one that was given to me has a UHF connector inside the base and two allen screws on either side of it about 2 inches further inside the base. It also has three screws on the exterior of the metal base just below the radome. Before I end up with a pile of junk, what needs to come out to get at the interior? Once I get to the interior what needs to be done to retune the elements. I know the need to get longer to lower the frequency, but how? Will it be obvious once I get it apart? If not convertable for use at 146Mhz then how about for use at 446 Mhz were the elements need to get shorter?

Gary I'm expecting some answers from you.

Any help will be greatly appreciated. Many thanks.
David Bourque

3666. Digest of Articles - QST Dec 93 (Long - 43k)

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-08 10:10:55 UTC
From: wvanho@infinet.com
Message-ID: <2t45ff$ih2@rigel.infinet.com>
Source record: 265418

DIGEST OF ARTICLES -- QST December, 1993

Following are digests of articles printed in the December, 1993 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. Subsequent issues will be posted one per week until they "catch up" to the current date in mid-1994, thereafter monthly.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1Taking the Mystery Out of Diode Double-Balanced Mixers
Author>Joshi, Shankar
Source>QST Dec 93, pp. 32-35

Abstract>Description of double-balanced and double-double-balanced diode mixers, their advantages, and how they are used. Also a review of representative available integrated-circuit mixers usable at frequencies up to 35 GHz.

Digest>Mixers are commonly used in radio equipment to convert signals from one band of frequencies to another through heterodyning. A simple mixer in a superheterodyne receiver accepts an input signal and a local-oscillator signal; its output is an intermediate-frequency (i.f.) signal. But this output also includes the original two input signals, plus various harmonics and beat frequencies.

The local-oscillator signal is the highest amplitude of any signal present. For this reason, the balanced-mixer was developed to balance it out. The double-balanced mixer takes it one step further and also balances out the original signal input. Consequently, to a first-order approximation, the output of a double-balanced mixer is the i.f. signal only. Actually, all the other, unwanted, signals are still present but reduced by orders of magnitude.

In this article, Mr. Joshi explains the design and application of the most advanced types of double-balanced mixers available today. The heart of the DBM is a diode ring, or bridge circuit, comprised of four Schottky diodes formed in a single integrated circuit. The input and local-oscillator signals are both applied in balanced form, each taken from the secondary of a center-tapped ferrite toroidal transformer. The output of the circuit is typically taken between the center taps of the two input transformers, in unbalanced form.

The author describes the characteristics of each of the major components in considerable detail. A table lists the parameters of ten representative types of Schottky diodes which are rated for operation at maximum frequencies that range from 4 GHz. to 35 GHz, depending upon model number!

He further describes the double-double-balanced mixer (DDBM). Thus is a circuit that takes the balancing process another step. It uses two Schottky quad-diode rings, each fed by a pair of toroidal transformers. It tends to balance out the distortion products even more thoroughly than the single DBM. It also offers better signal-handling capabilities and higher isolation between the inputs and the output.

DBMs are available as either discrete components or packaged complete circuits including transformers, as well as ring diodes, in single cans.

Title>TA2:Measuring and Compensating Oscillator Frequency Drift
Author>Hayward, Wes - W7ZOI
Source>QST Dec 93, pp. 37-41
Abstract>A description of a controlled temperature chamber and its use in determining the frequency vs. temperature characteristic of oscillators. Also describes temperature compensation circuits and how

to adjust them using the chamber.

Digest>In this day when much amateur radio gear uses synthesized frequency determination, there is still a place for analog oscillators of the time-honored Hartley, Colpitts, and other classic designs. All of these show some amount of frequency drift, primarily due to temperature changes. The author describes the construction of a simple controlled-temperature chamber that can be used to measure the temperature-versus-frequency characteristic of oscillators. By using it, one can design and insert temperature compensation into the oscillator circuit.

The author built his temperature chamber out of flake-board and styrofoam. For a heating element, he uses a light bulb. A thermometer continuously measures the inside temperature. Also included is an exhaust fan that can be used to exhaust hot air and draw in outside air when rapid cooling is desired. He suggests that another fan be placed inside the chamber to stir the air and insure that the temperature is uniform throughout.

Mr. Hayward describes his experiences in measuring and developing temperature-compensation circuitry for two oscillators. His recommended approach is that first, every attempt be made to make the frequency-determining components, especially the coil and capacitor of the oscillator tank circuit, to be as thermally stable as possible. Then, when the exact relationship between temperature and frequency is experimentally established, a capacitor with a negative temperature-coefficient can be used to offset the measured drift and reduce it nearly to zero. He shows how the required size of such a capacitor is calculated.

In his final summary, the author concludes: "You can have 'rock stable' oscillators if you're willing to build and apply some simple measurement gear".

Title>TA3:Computer-Controlled Electronic Test Equipment - Part 1
Author>Portugal, Ron
Source>QST Dec 93, pp. 42-50
Abstract>First installment of construction articles for computer-based bench instruments. This one covers the microprocessor board that will be used as the base for the instruments to come.

Digest>Most hams today seem to have computers in their shacks, or are contemplating them. They are frequently used for keeping logs, filling out QSL cards, and for operating in the ham digital modes: RTTY, Packet, PACTOR, etc. This article adds one more use for the station computer. It can be used as a control center for test equipment. As such, it will operate as the power supply, provide the control logic, record the data, display the results either as numbers or graphs, and provide a base on which relatively inexpensive, very effective bench equipment can be home-built.

In this first installment, Mr. Portugal describes, and provides construction details for, building the microprocessor board that will become the first building block of the array of test instruments. It utilizes a Zilog Z-8671 microcomputer chip. That chip contains an RS-232 serial port in addition to its general purpose central processing unit (CPU). All communications between it and the main computer are through the RS-232 port.

The Zilog chip is designed for use as a controller and is popular because of its ease of use. All programming is done in the Basic language. Many of its functions are preprogrammed when the chip is manufactured.

The author plans, in future installments, to give full construction details for building the following items:

1. Completely monitored, triple-section power supply.
2. Inductance/capacitance (L/C) meter.
3. 1-Hz. to 10-MHz. frequency-synthesized sine/square-wave generator.
4. 500-MHz. frequency counter.
5. Provision for additional instruments to be added in the future.

He indicates that all of these pieces of equipment can be built for costs ranging from $50.00 to $150.00 each.

A complete kit of parts for the microcomputer board, also including the Zilog Technical Manual, is available from Ronald J. Portugal, 52 Susan Lane, North Haven, CT 06473 for $150.00 plus $4.00 for domestic shipping.

Title>TA4:An Automated Mobile Radio-Direction-Finding System
Author>Flanagan, Robert H. - KA1RBH and Calabrese, Louis A., Jr. - N1LZD
Source>QST Dec 93, pp. 51-55
Abstract>Describes an automated RDF system built into an automobile. It calculates bearings automatically. The only human action required to find a hidden transmitter is to plot the bearings on an accurate map.

Digest>The authors describe a very sophisticated radio-direction-finding (RDF) system built into an automobile. They state that such a system "currently costs well into four figures...." so is not for widespread amateur use, but it is described for general background information.

The system is assembled from a number of components, each of which represents a recent development in technology. The bearing of a radio signal in relation to the body of the vehicle is measured by a Doppler RDF unit that uses four vertical quarter-wave antennas mounted on the roof.

To convert the relative bearing to a true compass bearing requires that the heading of the vehicle be measured accurately. This is done using a flux-gate compass. Then the absolute location of the vehicle must be known and located on a detailed map. The precise location is measured by a global-positioning system (GPS) receiver. This is the satellite-based measuring system that was developed by the U.S. Defense Department and has only recently been released for civilian use.

Finally, bearings taken from the vehicle at two or more locations must be plotted in relation to an accurate map to determine the location of the transmitter being sought. This is done on a laptop computer that automatically locates the intersection of two or more bearings in relation to the United States Geodetic Survey (USGS) Universal Transverse Mercator (UTM) grid. That grid covers the entire U.S. with squares, 1 km. on a side, which are plotted on very detailed topographical maps.

Once the computer shows the exact location of the transmitter in relation to the grid, it is easy to find it on the appropriate USGS map. The computer program that accepts the data from the RDF unit, the compass, and the GPS receiver, processes them, and displays the bearings on a grid, was written by the authors. Copies are available from Mr. Flanagan, KA1RBH.

One practical problem that the authors had to overcome in the operation of the system was the fact that signals are received not only directly from the transmitter but also by reflection from buildings, cars, metal poles, and a myriad of other objects common in residential areas. The system must sort out the direct signals and ignore the reflected ones.

In order to eliminate most of the stray signals, the program accumulates bearings for one minute at a time, selects the angle from which the largest number of bearings was detected, and rejects any that were more than 15-degrees from that angle. Then it averages all the bearings within that angle to report the most probable direct bearing. As the car moves, more and more bearings are calculated and, as the vehicle gets closer, the uncertainty of position becomes smaller and smaller.

The authors describe two improvements that they would like to add to the system. First, it would be a great convenience to be able to display a highly detailed map on the computer screen with the grid squares and plotted bearings superimposed so that they could dispense with the cumbersome paper maps.

Second, they are considering using packet radio to interconnect all the "hunters" in a foxhunt so that all participants would have the benefit of the bearings taken by the others. The result would be: "Working as a group, we could watch our bearings zeroing in as our screen display is updated automatically. Even the fox could get in on the action and watch our progress!" They did not address the question of whether this would defeat the purpose of the foxhunt!

The authors report that they have utilized their automated system in several foxhunts and have found it to be a "great tool" because it is "fast, accurate, and allows the operator to concentrate on other activities, such as driving and picking the next location for a bearing."

PRODUCT REVIEW (PR)
conductor: Mark Wilson, AA2Z
Editor, QST

Title>PR1:The Ten-Tec Scout Model 555 MF/HF Transceiver
Author>Newkirk, David - WJ1Z
Source>QST Dec 93, pp. 77-80
Abstract>A review of the least expensive, nearly full-function HF transceiver now on the market.

Digest>The Ten-Tec Scout is a highly innovative new transceiver that offers good performance on all bands from 1.8 to 29.0 MHz. It features 50-watts output, very small size, a built-in keyer, and an ultra-low price!

One of the ways that Ten-Tec has kept the price down involves the method of band changing. There are no bandswitch and built-in multi-band components!. Instead, a separate module for each band must be plugged into a front- panel receptacle. The listed price of $495.00 is actually for a single-band receiver; each additional band requires the purchase of a module for $25.00.

Reminiscent of the famous National HRO receivers of 40 or more years ago, the plug-in modules can be considered either an advantage or a drawback, depending upon one's point of view. For one thing, buyers do not have to pay for bands they do not intend to use. Also, one can make an argument that plug-in coils can be more efficient than the bandswitched variety. On the other hand, if one buys a full complement of 8 extra plug-in modules, the additional $200.00 makes a total price not far below that of competitive rigs.

In the process of keeping both the physical size and also the price small, Ten-Tec has made some compromises. For one thing, the frequency-determining circuit is a permeability-tuned oscillator, not a synthesizer. Like all oscillators, this one is subject to some drift as well as step changes caused by physical jarring. But the drift is not a big problem, for two reasons: First, the rig contains a frequency counter that displays the actual frequency; and second, the frequency-counting software detects the drift and counters it automatically! These compensating actions are not instantaneous, however, and both the operators and others in QSO with them can detect the frequency changes as they occur.

The Scout's small front panel contains only 5 knobs: tuning, audio gain, i.f. bandwidth, offset tuning (RIT), and microphone gain. In addition,

there are three switches, two jacks, a four-digit frequency display, 1 LED indicator, and a meter.

The switches are: (1) a 3-position Tune-Off-Noise Blanker. In the Tune position, the transmitter emits a low-power signal (CW) for antenna adjustment. The Noise Blanker activates the impulse-noise limiter circuit. (2) Speed-Off-RIT. In the Speed position, it allows one to adjust the speed of the internal keyer upward or downward by pressing the dot or dash paddles; the RIT position turns on the receiver offset tuning. (3) Power (on-off).

The two jacks are for a microphone and for audio output to speaker or headphones. The meter displays signal strength while receiving, and either output or SWR while transmitting. The single LED indicator, "ALC", indicates when the automatic level control is operating during transmission.

During single-sideband operation, the appropriate sideband is selected automatically by the band module in use. It is not possible to reverse sidebands.

The reviewer operated the rig and paid special attention to the receiver, since it is in the receive function that most inexpensive transceivers show their limitations. He was pleasantly surprised at the Scout's performance. It uses a single i.f. at 6144 KHz., so image rejection is not as complete as with the latest top-of-the-line transceivers, but the images are unlikely to cause any real problem except under unusual operating conditions.

I.f. filtering is done by multiple-crystal filters. On CW, the reviewer found the selectivity to be "acceptably good - it suitably knocks down the CW audio image even with i.f. bandwidth at its widest setting".

In transmitting, on CW the keying is excellent and the rig always operates full break-in. Its switching time is fast enough even for AMTOR operation. On SSB, its audio is good.

The AGC operation is a compromise between SSB and CW; it uses a fast attack and slow decay. The reviewer found its operation to be "first rate". His final conclusion was: "I like the Scout.... Its simple controls and straightforward operation put a minimum of mechanism between me and the stations I want to work."

Title>PR2:QST Compares Packet TNCs
Author>Ford, Steve - WB8IMY
Source>QST Dec 93, pp. 80-81
Abstract>A review of five current terminal-node controllers for packet only. Included are units built by Kantronics, DRSI, MFJ, AEA, and PacComm, all priced between $100 and $150.

Digest>Two-meter packet is the most popular digital mode in ham radio today. There are several reasons for this. For one, the advent of

"no-code" licenses means that the majority of new hams head for VHF. Anyone with a computer and a 2-meter rig, even a hand-held, can get onto Packet easily and at relatively low cost. More importantly, packet is an exciting mode. Lots of new things are happening, networks are rapidly expanding, high-speed trunk lines are criss-crossing the countryside, and digital technology naturally appeals to a great many hams.

For a ham who already has a computer and a 2-meter station, the only added equipment he needs to get onto packet is a terminal-node controller (TNC). Of course, one can use an expensive multi-mode communications processor (MCP) that provides a wide variety of operating modes in addition to packet, at a correspondingly high price. But if one is interested only in VHF packet, a late-model packet TNC can be bought for a list price ranging from about $115.00 to $150.00. This article reviews five such models now on the market.

The 5 units reviewed are the Kantronics KPC-3, the DRSI Model DPK-2, the MFJ Model 1270B, the AEA Model PK-88, and the PacComm Tiny-2 Mark II. All five of these provide the most basic features: Mailbox, KISS mode, and Host mode operations. All but the DRSI DPK-2 also provide automatic mail handling, so that one can make arrangements with their local packet bulletin-board system (PBBS) and leave the receiver on continuously. Then, any mail that is received by the PBBS will be automatically forwarded to one's own computer.

The selection between the 5 models will probably hinge on what other features besides those listed above are of interest to the buyer. Other items to be considered are: whether one is also interested in packet on the HF bands; receiving weather maps by facsimile; 100-percent compatibility with the original Tucson Amateur Packet Radio (TAPR) Model TNC-2; whether software is included; and other factors.

HINTS & KINKS (HK)
conductor: David Newkirk, WJ1Z
Sr. Asst. Technical Editor

Title>HK1:Is Your Radio Equipment REALLY Grounded?
Author>Cardwell, Martin L. - NB3T
Source>QST Dec 93, p. 85
Abstract>How to assure a low-resistance ground connection.

Digest>The writer had his common ground point in the shack grounded to a rod driven into the earth. His beam antenna was likewise connected to a ground rod at the base of the tower. In an attempt to trouble-shoot QRN, he found that there was very high resistance between the two ground rods, indicating that either, or both, had very high contact resistance with "true ground".

To cure the problem, he replaced his old ground rods with pure copper tubing. Now he measures between 10- and 15-ohms between the two rods that are some 45-feet apart. He intends to monitor this resistance periodically to ensure that the ground connections will continue to have low resistance in the future.

Title>HK2:Audio Patch Cords and RF
Author>Swynar, Edward "Eddy" Peter, VE3CUI
Source>QST Dec 93, p. 85
Abstract>Use r.f. coax, not audio patch cords, for rf!

Digest>Mr. Swynar cautions all hams not to use audio patch cords for r.f. since the audio shield is not a good r.f. shield. Use coaxial cable designed for radio use.

Title>HK3:Tool Pouch Holds Hand-Held Transceiver
Author>Hendrey, Bill - KC6JGS
Source>QST Dec 93, p. 85
Abstract>A holster available at hardware stores just fits the ICOM IC-24AT hand-held transceiver.

Digest>Mr. Hendrey points out that a Skil holster, which is designed to hang from one's belt and carry a Skil tool, exactly fits the ICOM IC-24AT hand-held transceiver. The stock number designation of the pouch is "Twist Pouch No. 92160", available at hardware stores.

Title>HK4:How About NOT Using a 555?
Author>Newkirk, David - WJ1Z
Source>QST Dec 93, pp. 85-86
Abstract>Suggests using an LM322 or LM3905, instead of a 555, timer chip in the 10-minute timer circuit described by Conklin in HK, QST Nov 93.

Title>HK4:A Fix for Faded Blue-Green Drake Dial Lighting
Author>Ross, Arnold J. - W2NXC
Source>QST Dec 93, p. 86
Abstract>When the color fades from light bulbs, paint them with nail polish.

Digest>The writer notes that the dial lights on Drake ham equipment which are blue-green when new, fade in time. He recommends restoring the original tint by painting the bulbs with blue nail polish, Artmatic USA No. 163 Peacock Blue Nail Enamel, bought at K-Mart.

TECHNICAL CORRESPONDENCE (TC)
conductor: Paul Pagel, N1FB

Title:TC1:FAX480 Updates
Author>Taggart, Ralph - WB8DQT

Source>QST Dec 93, pp. 87-88
Abstract>Describes improved software for slow-scan TV and FAX.

Digest>This letter is of interest to hams who are involved in slow-scan TV (SSTV) and FAX video modes. The writer is the author of the FAX480 software that provides an operating program for FAX and SSTV transmission and reception.

In his letter, Mr. Taggart discusses the details of his latest upgrade, known as FAX484/FAX481P. The new upgrade improves the loading of images into memory, simplifies a manual restart, and provides a better method of overcoming problems caused by noise or QRM interrupting the reception of an image.

Title>TC2:Automobile RFI Solved
Author>Zak, Stan - K2SJO
Source>QST Dec 93, p. 88
Abstract>Toyota driver corrects RFI problem after receiving no help from the manufacturer.

Digest>The writer reports problems that developed when he installed a Kenwood VHF transceiver in his 1993 Toyota Camray. When he transmitted at full 50-watts output, a dashboard warning light indicated that the taillight had failed. He followed of Toyota's recommendations to solve the problem, without success. He finally solved it by shielding the rear-window brake-light assembly with a grounded-wire screen. The screen did not affect the brightness of the light.

Ed Hare, KA1CV, ARRL Laboratory Supervisor, appended a comment to the letter. He reports that he had contacted the Toyota Technical Department about frequent problems reported by hams who had installed transceivers in their automobiles. He was assured that transmitters running up to 100-watts should have no problems with Toyota vehicles.

The fact that Mr. Zak got no help from the manufacturer but was able to find such a simple solution to his problem shows that Toyota has not spent the engineering time required to solve such trivial problems. It seems that their assurances have little value. Mr. Hare is accumulating such reports and intends to keep pressing recalcitrant manufacturers to obtain meaningful help.

LAB NOTES (LN)
conductor: Steve Ford, WB8IMY
Asst. Technical Editor

Title>LN1:Satellite-Tracking Software
Author>Ford, Steve - WB8IMY
Source>QST Dec 93, pp. 89-90
Abstract>Describes satellite-tracking software, what it does, and how to use it.

Digest>This month, Mr. Ford has prepared, in Question and Answer format, a description of satellite-tracking programs and what they do. The function of such software is to tell the user when a particular satellite will appear above the horizon, and specify its exact postion continuously as it passes overhead. To do this, the computer must be given the latitude, longitude, and elevation above sea level of the ham station.

It also must be given the orbital elements of each satellite. Orbital elements are sets of numbers used to describe the orbit of a satellite. They can be obtained from various bulletin boards, both via telephone and packet radio. They must be updated periodically since orbits change slowly with time.

Various software packages offer different features. In many cases, they display maps that plot the satellite at all times. Some programs also provide control outputs that can be used with antenna mounts that are motorized in both azimuth and elevation to position the antenna automatically and follow the satellite as it passes overhead. The article lists the name and address of five different sources of appropriate software.

NEW HAM COMPANION (NHC)

The New Ham Companion is a regular monthly section in QST that concentrates on articles of primary interest to newcomers to ham radio.

Title>NHC1:The Frequency and Deviation Conspiracy
Author>Leahy, Bill - K0ZL
Source>QST Dec 93, p. 66
Abstract>Why it is necessary that FM frequency and deviation be carefully adjusted, and how to do it.

Digest>The author explains what frequency and deviation mean in frequency-modulated (FM) transmissions, how important it is that they be adjusted properly, and how to go about such adjustment. Especially when working through a repeater, it is necessary to adjust the frequency of the rig to within about 0.2-KHz. of nominal and also to adjust the deviation to a total of 5-KHz. If the repeater requires a continuous tone-coded squelch system (CTCSS) tone, then the deviation must be reduced to about 4.5 KHz. to allow for the addition of the tone.

If both frequency and deviation are not properly set, it is probable that the signal will be "chopping" in and out of the repeater because, on voice peaks, the carrier energy is outside the passband of the repeater's receiver.

Title>NHC2:HF Mobiling - Taking it to the Streets
Author>Gold, Jeff - AC4HF
Source>QST Dec 93, pp. 67-69

Abstract>Describes operating HF mobile from an automobile and suggests some suitable equipment.

Digest>Mr. Gold describes his enthusiasm for operating mobile on the HF bands from his automobile. Then he describes a number of commercial antennas and also small-size transceivers handy for mounting in or under the dashboard. He points out that almost any kind of HF operating can be done from a vehicle, including nets, DXing, contesting, digital-mode operating, rag chewing, and QRP operating.

Title>NHC3:The Lure of the Ladder Line
Author>Ford, Steve - WB8IMY
Source>QST Dec 93, pp. 70-71
Abstract>The advantages of open-wire line for feeding a dipole.

Digest>Mr. Ford describes the advantages of feeding a multi-band dipole with balanced open-wire line, as opposed to coax. He relates his own experience when he converted from coax to 450-ohm ladder line and achieved much better performance. He largely refutes the common fears of problems arising from using open-wire line near metal.

He relates advice that he received to the effect that crossing a metal window-sill at right angles, for example, is no cause for worry so long as there is not an actual metal-to-metal contact. Also that ladder-line can be run within a few inches of even large masses of metal, such as aluminum siding, so long as a separation of a few inches is maintained.

Title>NHC4:Radio and Railfanning
Author>Clark, Brad - NP4AI
Source>QST Dec 93, pp. 72-75
Abstract>Activities of railfans and how they use ham radio in them.

Digest>There are a large number of people who call themselves railfans and are interested in all aspects of railroad operation. Most are especially interested in the historical aspects, including steam engines and any tools and equipment dating from the era of steam.

Recent laws making mobile use of radio scanners illegal to most people have led a number of railfans to earn ham radio licenses, because hams are explicitly allowed to use mobile scanning equipment. With a ham license, they can not only monitor traffic regarding rail operations but they can also use VHF/UHF HTs to keep in contact with other fans on an outing.

The author describes organized activities carried on by railfans, includes hints of how to enjoy them, and cautions against unsafe, discourteous, or illegal activities.

Title>NHC5:The Doctor is IN
Author>Various

Source>QST Dec 93, p. 76
Abstract>Questions and answers for ham newcomers.

Digest>This is a regular monthly feature in the New Ham Companion section. It is a series of questions and answers of special interest to newcomers.

In this month's column, questions discussed were ways to route the coax feedline to a 2-meter, 4-element quad antenna; DX packet clusters; radial wires used with a vertical antenna; and different types of memories used with personal computers.

RADIO TIPS (RT)

These are short items, scattered among the articles in the NEW HAM COMPANION section.

Title>RT1:The Joys of FM Simplex
Author>Ford, Steve - WB8IMY
Source>QST Dec 93, p. 75
Abstract>Long QSOs should be direct between amateurs (Simplex), not through repeaters. They should take care to avoid frequencies where they might interfere with other activities.

Digest>In this tip, the writer reminds readers that repeaters can only carry one QSO at a time, so common courtesy requires that QSOs carried by repeaters should be kept as short as possible so that others can get their chance.

If two people want to carry on a long QSO on a VHF band, they should try to do it by operating simplex, that is talking to each other directly. They should move to a frequency set aside for simplex operation where they are not likely to be bothered, or bother others.

Included in the article is a table of popular FM simplex frequencies on the 6-meter, 2-meter, 1.25-meter, and 70-cm. bands. To find other simplex frequencies, refer to the ARRL Repeater Directory which describes all VHF/UHF band plans in detail.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Heroics in the Heartland
Author>Palm, Rick - K1CE
Source>QST Dec 93, pp. 21-26
Abstract>Public service by radio amateurs during the Summer, 1993 floods.

Digest>The floods in the upper midwest during the summer of 1993 were the most widespread, long lasting, and devastating floods in the modern history of the United States. But the loss of life was relatively small. Some part of the credit for this must go to the efficiency of

communications that were able to get help promptly in the many life-threatening situations that developed. Ham radio volunteers played a large role in this.

Mr. Palm has assembled an article made up of reports by ARRL Emergency Coordinators and other members of the ARRL Field Services relating the work done by ham volunteers in various parts of Kansas, Missouri, Iowa, Minnesota, Illinois, and others of the states hardest hit.

Title>GI2:A Nation Reborn
Author>Enderud, Einar - LA1EE and Wiig, Erling - LA6VM
Source>QST Dec 93, pp. 27-31
Abstract>Ham radio activities in Eritrea.

Digest>Eritrea, a new nation located near the Horn of Africa and facing the Red Sea, became independent April 27, 1993. Only a little more than a month later, four hams from Norway and one from Japan established the first Eritrean ham station, E35X. The authors were two of the hams who participated and in this article relate their experiences.

What had originally started out to be a DXpedition grew to be much more. The five visitors not only established the ham station and put it on the air for many days of intensive operation under the pressure of tremendous pileups, but also they conducted seminars on ham radio at two different places to two different groups. The first was a course of instruction in amateur radio for personnel of the Eritrean Telecommunications Authority (Telecom) and the other was for the students and faculty of the Asmara Technical School.

Finally, when the seminars were completed, they helped organize a radio club at the school, donated their equipment to it, and helped install the antennas and start up the station equipment for the club members.

During their brief stay, they had made a total of 19,600 contacts and provided a new country for nearly that many hams worldwide. They enjoyed themselves thoroughly and made many friends among the friendly and warm-hearted Eritrean people.

Title>GI3:A Cold Season
Author>Vaughan, Bruce - NR5Q
Source>QST Dec 93, pp. 56-57
Abstract>Fiction. An aged ham keeps in contact with his children by radio.

Digest>This is a fictional tale of a ham oldtimer, in his mid-70's, a widower, living alone with his dog. His children live far away and he rarely has the opportunity to enjoy them and his grandchildren. But he keeps in contact with his son who is a ham. At the end of the story, he is pleased to learn from a message received from his son, via packet, that his two grandsons have received novice licenses and will meet their grandfather on 40-meter CW the following Saturday morning.

Title>GI4:The First VHF Contest from Cuba
Author>Coro, Arne - CO2KK
Source>QST Dec 93, p. 58
Abstract>Cuban participation in the June, 1993 VHF QSO Party.

Digest>Mr. Coro and a number of other Cuban hams participated in the June, 1993 VHF QSO Party. They were pleased to find sporadic-E openings on 6-meters to the USA on Saturday, and on the following day, similar openings allowed contact with several Caribbean islands.

On 2-meters, tropospheric propagation allowed contacts with many U.S. stations in Florida. In the end, they had logged 260 stations on 6-meters in 80 grid squares. On 2-meters they made 62 contacts in 11 grid squares. The author states that news of their success spread through the rest of the Cuban ham community and many Cuban hams are now building single-sideband transverters for 6- and 2-meters, and others are making plans for UHF operations on 432- and 1096-MHz. bands.

Title>GI5:Gatti-Hallicrafters: The First Grand Ham DXpedition
Author>O'Brien, Mike - N0NLQ
Source>QST Dec 93, pp. 59-63
Abstract>A DXpedition sponsored by the Hallicrafters Company in 1947 was an enormous production.

Digest>In 1947, Attilio Gatti, an Italian explorer, convinced his friend, Bill Halligan, founder and CEO of the Hallicrafters Company, manufacturer of ham gear, to organize a ham DXpedition to go to the area of East Africa called the "Mountains of the Moon", near Lake Victoria and Mt. Kilimanjaro, in what was then Tanganyika Territory and Kenya, under British control.

The expedition was organized in a grand manner. Four special 23-foot long trailers were designed and built, one of which was outfitted as an elaborate and completely equipped ham station. As finally organized and equipped, the expedition moved in a caravan of at least eight vehicles - trucks, station wagons, and tractor-trailers - manufactured by International Harvester.

Shipped aboard a freighter, the entourage landed at a port in Kenya in January, 1948. Over the succeeding nine months, it travelled 5000 miles by land logging QSOs all the way. The total number of contacts made is not known, because the logs were somehow lost.

The article does not include any estimate of the costs involved in the expedition, but they must have been enormous. If it is true that Mr. Halligan and Hallicrafters absorbed the major part of the cost, it appears that he considered it advertising expense. He must have felt that it was reasonably successful because a few years later Hallicrafters again sponsored a DXpedition, but that time on a much smaller scale, to Clipperton Island.

Title>GI6:Ham and Former Ham Share 1993 Nobel Prize
Author>Karpf, Stephen - WJ2P
Source>QST Dec 93, p. 91
Abstract>The 1993 Nobel Prize for Physics was won by two American hams.

Digest>The 1993 Nobel Prize in Physics was awarded to two Americans, Dr. Joseph Taylor, K1JT and Dr. Russell Hulse, ex-WB2LAV. Both developed their interest in radio as hams at young ages. Dr. Taylor was originally licensed at age 13 and Dr. Hulse, also, got his license when he was a teen-ager.

Their ham activities led them to become interested in antennas, and from there they graduated to radio astronomy. Working together at the great radio telescope at Arecibo, Puerto Rico, they discovered and studied a binary pulsar. It was this discovery, and their theoretical explanations of what they observed, that earned them the prize.

Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

Annoucing the creation of the Boston Amateur Radio Club World Wide Web
home page.

What is the World Wide Web? It is like the Internet, except consisting of
information instead of networked computer systems. The Web consists of
a variety of information all linked together, in no particular order, with
"links" to other information.

So, what is the address of the Boston Amateur Radio Club Web page?
http://www.acs.oakland.edu/barc.html

This doesn't look like a normal telnet or ftp address. How do I connect?
You need to use some new programs, possibly available on your system.

The graphically oriented program, called Mosaic, is most preferable.

The for non graphically-oriented users, you have a choice: www or lynx

(www is a program which does stand for World Wide Web, but not to be
confused with the Web itself :)

To use either of these two command-line programs, you would type:
lynx http://www.acs.oakland.edu/barc.html for the connection,
or similarly, for www...
www http://www.acs.oakland.edu/barc.html for the connection.

If you have any questions, are completely confused, and/or want to know
more, please don't hesitate to contact me at any of the addresses in my
signature file, or call me at the Northeastern University radio club
(local Boston area calls only, please): 617-373-4198

73,
Scott

OK, I'm thousands of miles away, but:

If your 70cm band is dominated by frequencies reserved for (and jealously guarded by..) closed repeaters, and that many of these see only little use, then what is there to stop some nice organisation like the one that made off with a chunk of your 220MHz band using measurements of low occupancy as ammunition in an attempt to grab some very valuable prime spectrum ?

These people can make an awful lot of money out of a MegaHertz. It doesn't need to be the full band under threat, just a few quiet patches may be enough to create vulnerability.

Cheers
David GM4ZNX

3669. Re: 440 in So. Cal.

Newsgroup: rec.radio.amateur.misc

Walter Reid Fletcher (fletcher@moho.uwyo.EDU) wrote:

: After all this I find it interesting that no one has demanded that ALL if not
: a much greater number of 2-meter repeaters be made open due to the scarcity
: of available spectrum in that band in So. California. There's much less
: bandwidth in the 2-meter band that in the 70 cm band, after all. So why is
: everyone steamed about 440 MHz and not 146 MHz? There's gotta be more 2m
: rigs in So. Cal. than 70 cm rigs.

Basically the reason I haven't complained in this manner is that most of
the repeaters on 2 meters in Southern California *are* open. 2 meters in
Southern California is a delight, with many high, medium and low level
open repeaters to chose from.

440, on the other hand, is a wasteland of underutilized spectrum and
private repeaters where the average ham is not welcome.

I'll pass on your other comments.

3670. Typical Hams

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-08 12:51:02 UTC
From: wjturner@iastate.edu
Message-ID: <2t4erm$1le@news.iastate.edu>
Source record: 265328

As a parting comment to this usenet, a net that is obviously beyond hope of every having the cumulative IQ raised to the double-digits, I want to point out that many hams on here are typical of the old-timers that are destroying any chance ham radio ever had at being a useful hobby that will continue to grow. These are closed-minded hams. They are generally Extras who have been in the hobby for five to ten years, posiibly more, but not likely. They blame all the problems the hobby has, including those that have been here for sixty years or more, on the new no-code techs, or as they call them, the no-clue techs. They don't realize that they are the true hams with no clue. They don't know or care for any rules, just what they want done. Even if they wanted to look up anything, they would not know the correct place to look. (What, you mean the dictionary doesn't tell me how to put up an antenna?!) These are the same hams who whine for the "good-old" days, and then whine when we are loosing spectrum because it is not used. They also don't believe *they* should use this spectrum, but the new members that they--at the same time--oppose coming into the hobby.

I find it very interesting that the hams who have been in the hobby the longest, especially those what have been licensed for 30, 40, 50, or even 60 years, are the ones that give the most support to new hams. They almost never give an irrational arguement for keeping standards that are obviously out of date. They were the ones who could have opposed these "typical" hams when they entered the hobby, but they didn't because they remembered that they, too, were once new to ham radio.

Isn't it interesting that the hams who have been around longer seem to remeber better what it was like to be a new ham?

3671. Jupiter & Radio astronomy

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-08 13:19:03 UTC
From: MOWE@SLUMUS.STLAWU.EDU
Message-ID: <08JUN94.10062989.0073.MUSIC@SLUMUS>
Source record: 265361

In a recent posting, JohnK@ATK.com asked about hearing the impact (via radio of course) of the Shoemaker-Levy fragments with Jupiter.

A short article on this topic will appear in the July issue of QST.

Basically, the answer is this: Yes, HFers with beams for 10, 12, or 15m might be able to hear disruptions of Jupiter's normal radio emissions due to the impacts. BUT: you will have to monitor over a long period of time because (1) Jupiter's normal emissions vary widely in amplitude & frequency due (mainly) to the effects of it satellite Io; and (2) astronomers can't predict exactly when the fragments will splash. Consequently, a sudden increase or decrease in emission might, or might not, represent an impact. It won't be easy to tell.

Happy listening.

3672. ** QUESTION TO HTX-202 OWNERS **

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-08 13:56:25 UTC
From: al372@cleveland.Freenet.Edu
Message-ID: <2t4im9$p4k@usenet.INS.CWRU.Edu>
Source record: 265330

To HTX-202 owners (and others),

I have a 202 to which I occasionally hook up a power supply (as described in the owner's manual). I even have the Micronta 12-volt regulated power supply that is recommended in the owner's manual.

On high power the 202 warms up as I transmit (as expected). My question is: Is the 202 supposed to warm up on low power also? My reason for asking is because I have a friend who's HT (not Radio Shack) warms up on high power but NOT on low power.

Is it normal for the HTX-202 to warm up on low power as well as high power?

In shareware, PCTrack is pretty good but "Kelps" must be entered manually.
The best is InstantTrack by Franklin Antonio. It will track 6 satellites
simultaneously (it actually can track 200 at once but only displays 6)
and keps can be easily loaded automatically from nasa or amsat format
elements. It is available through Amsat.
Good luck,

International Packet Youth Forum.
As you have read in the June edition of the QST on page 58, there will is a place for young hams to meet. Unfortunately, due to my error, some of the details were vague. The time was moved after the article was sent to print to Sundays at 2000 CST (8 p.m. Chicago, same as Mondays at 0100 UTC) to accommodate the young people in the Eastern Time zone who has to get some sleep. Additionaly, the node where I telnet into has been moved to another location, and it took me a while to find an alternate place to telnet from, so I appologize for not cheking in to my own forum. Now the questions has been pouring in to me, asking can they telnet to the forum on packet. Since all situations are different I would like all of you who has a question in regards to telneting to the forum, or about the forum itself to contact me on an individual bases via E-mail, Packet or my callbook address. And also, If you have already sent me a message and received no response, try sending another one.

Strays

CORRECTION:
YOUTH NET ON INTERNET

An item under Strays on page 51 of June QST that invited young packet operators to join the International Youth Forum on Saturday nights at 0200 UTC contained access instructions that had some incorrect information. Licensed hams who operate TCP/IP packet radio with a local Internet "gateway" (or who otherwise have access to the Internet) should Telnet to a local AmprNet Converse Server (port 3600; eg, telnet 44.xx.xx.xx 3600), and after logging in, go to Channel 14. The time of the forum has been also changed to Sunday at 2000 CST, to accommodate others in other time zones. Contact Alexis Leynes, N9KYJ, 7703 Bolton Way, Hanover Park, IL 60103; e-mail alex.n9kyj@aol.com or packet N9KYJ@W9ZMR.IL.USA.NOAM.--thanks, Walt Dubose, K5YFW, San Antonio, Texas

For some reason the logic of which has always escaped me, a number of
countries charge a higher postal rate for sealed than for non-sealed
letters that are otherwise identical. This is why one sometimes gets
cards back with the envelope flap tucked in rather than sealed (and
sometime the card is stapled to the flap so it doesn't fall out).
The cut corners may qualify as a unsealed letter.

In other cases, the corner cuts are a simple message to would-be
postal thiefs -- there's nothing of value in here - you can look -
so don't steal me. (Once a thief opens a letter, he's much more
likely to discard it than to go to the trouble of resealing it and
risking his tampering being discovered.)

Wow. rec.radio.amateur.misc.conspiracy.theories :-).

I received a HH2PK card directly from Patrick too. The envelope had
the two bottom corners cut off.

I have had the same thing (well, just one corner) happen with cards
from other than Haiti, and I don't even work much DX. I suspect it
has something to do with postal rates rather than some weird conspiracy
theory. HH2PK is probably just cutting corners, heh, heh.

By the way, KA9RLJ is a perfectly good route to get HH2PK's cards from.
I received a second HH2PK card through KA9RLJ recently. Just be patient
if you have sent one in.

I haven't heard Partick on lately. If you need HH, Patrick is often
on during RTTY and Phone contests. The ANARTS contest is this weekend.

```
-------------------------
FLIGHT SYNOPSIS: EOSS 17
-------------------------

Date: June 4,1994
Launch time: 16:00 UTC
Launch site: Monument, Colorado
Launch site Coordinates: Latitude 39 deg 02.67'N
Longitude 104 deg 52.53'W

Balloon Burst Altitude: 94,000 feet

Balloon Burst Coordinates: Latitude 39 deg 08.22'N
Longitude 104 deg 40.08'W

Landing Site Coordinates: Latitude 39 deg 11.52'N
Longitude 104 deg 25.99'W

Ascent Rate: 550 fpm
Descent Rate: 1113 fpm

Payload Frequencies:

Telemetry: 144.340 MHz
ATV : 426.250 MHz
Beacon : 147.555 MHz

Synopsis:

The flight of EOSS 17 was another triumph in the many successful launches
for Edge of Space Sciences Inc. (EOSS). This flight's success was due to the
tremendous teamwork of personnel at the ground station and out in the field.

The flight started promptly at 16:00 UTC from the NAVSYS INC. facility in
Monument Colorado. The weather was excellent.

During the flight a barometric switch was tested. The purpose of the switch
is to add a safety to the cut down circuit. The switch is designed to be
open below and closed above a certain altitude. The experiment was deemed a
success. The switch closed at 26,000 feet on ascent and opened on descent at
25,000 feet. This switch will be tested on future flights to determine the
repeatability of the results.

APRS performed perfectly during the flight. The spectators were treated to
the "realtime" updates of the balloon's position.

The ATV video was P-5 during most of the flight. We captured the bursting
of the balloon, via the onboard ATV camera, on video tape. Dave Radomski,
```

KT0H, video taped the balloon burst with a camcorder from his ground position out in the field. During the descent of the payload the ATV antenna was forcefully separated from its short coax lead and plummeted to the ground from about 70,000 feet; location unknown. We should have some more dramatic video to add to the EOSS library.

The tracking and recovery team did another great job. During the descent phase of the flight at about 44,000 feet, Loran-C lost its lock and did not regain it for the remainder of the flight. From this point on, the ground station was unable to assist in determining the payload's location other than providing an RDF fix. Thanks to the expert assistance from our tracking and recovering team, the balloon's position was followed using the more traditional direction finding techniques we employ on every flight.

The tracking and recovery team consisted of:

Paul Ternlund WB3JZV (computerized triangulation)
Marty Griffin WA0GEH (field coordinator/net control)
Ed Boyer N0MHU air mobile
Richard Shaw WB5YOE
Tom Isenberg N0KSR
Bob Ragain WB4ETT ----\
Colleen Ragain N0QGH --- Family affair!
Dawn Ragain N0QCW ----/
Greg Burnett K0ELM
Greg DeWit N0JMH
Larry Cerney N0STZ
Roger Smith N0LEQ
Bill Andrus N0EUL
Rick von Glahn N0KKZ (back at the ground station)

EOSS would like to extend its sincere thanks to the members and regular users of the 146.970 MHz Pikes Peak FM Association's fantastic repeater. Having a repeater on a 14,000 foot tall tower (@8,000 above surrounding terrain) is a real help. Balloon flights really tie up the frequency and the patience of their regular users is greatly appreciated.

Thanks to all the folks at NAVSYS for their great hospitality and the use of there facility, and to all the folks out in the field and all who helped set up and tear down the ground station.

The original plan for this flight called for a test of the "Shuttle II" controller. However, unanticipated assistance from Murphy introduced a few problems and we had to abort that test. Shuttle II should be ready soon and we will announce its maiden flight when we have a firm schedule set.

>We were given a Phelps-Dodge antenna. Freq tag removed. I know for a fact
>that it was in service at 152Mhz. The hope was to retune this antenna for use
>at 146Mhz. When asking around on the proper way to do this I was advised that
>this antenna cannot be modified because the antenna is only 20 feet long.
>These same people tell us we need one that is 22 feet long. Fact or fiction?

There is no inherent way of retuning VHF StationMasters. The 152 MHz antenna
you have can probably be somewhat usable on the ham band, but not at
maximum performance. One trick to pulling highband VHF antennas down to 2m
is to use aluminum or copper foil tape. You can make a ring out of regular
aluminum foil, wrap it around the radome, and secure it with a rubber band.
Then, while transmitting with low power (a watt or two), move the ring up
and down the length of the radome to find a spot where SWR dips. Do the
same thing again higher up the antenna with another ring. Then use foil
tape in place of the rubberband-and-foil. This tuning-for-low-SWR-method
doesn't guarantee anything about how good the pattern will be, but at
least your PA won't complain.

There are two versions of the VHF StationMaster. One is just called the
StationMaster (SM), the other the SuperStationMaster (SSM). The regular SM
has a rather narrow bandwidth, but works fine for 600 kHz spacing. The
SSM has a wider bandwidth which is generally not needed for 2m amateur
repeaters. Note that on UHF the terms SM and SSM more aptly describe
the size of the antenna rather than the bandwidth.

SM and SSM were both trademarks of Phelps-Dodge (that's why all the models
begin with PD). What was Phelps-Dodge is now Celwave. SM and SSM are
now Celwave trademarks, and they still use the PD nomenclature.

>I've been offered yet another antenna, I'll have to pay for this one, that has
>already been in service in the amateur band. The owner thinks the model
number is PD-220. Cell Wave I believe.

This is probably your best bet.

>We've contacted a local distributor regarding the purchase of a new antenna.
>Cell Wave PD-200. Big bucks. Distributor says this antenna is 21 feet long.
>I'm also not sure I've got the model prefix correct.
>
>Now, what is the difference between the 200 and 220? Anyone know?

One is probably the regular SM, the other the SSM. Don't have the catalog
in front of me.

Don't pay much attention to the lengths. Somebody might quote you the length
in the catalog, which is usually the length at the lowest frequency

available for the model (like 136 MHz), somebody else may give
you the real length at your frequency of choice (like 146.76 MHz),
somebody else may give you the length of just the radome and not the
pipe, etc.

On VHF, I'd just generally forget about getting a used commercial one and
trying to reuse it. They aren't "tuneable" aside from gimmicks like
the one described above. You can gut them and build your own collinear
though. If you use RG8 or another coax with a relatively slow
velocity factor, you can probably make it fit inside a commercial-band
radome.

Really old SM and SM-like antennas are filled with wax. Others are
filled with foam. Getting them apart can be a real bear. Generally
speaking, everything slides out the bottom of the radome. You'll
need a torch to get the lightening spike off the top first - the antenna
is connected to it.

If your antenna is side-mounted, I'd suggest getting a Hustler G6 and
using an upper anti-sway arm. The Hustler's are built very well and seem
to hold up well in rough environs. Of course they're not in the same
league as a StationMaster, but the different mechanical design approach
may do better in your environment. Alternatively, think about a 4-bay
instead of a stick.

I had a couple of Diamond F718A's on one of our UHF repeaters on a mountain
(well, what people around here call a mountain anyway), and after less
than 2 years of use, they showed signs of wear. The Diamond's were
more or less an experiement to see how well they worked. Electrically,
they were pretty good, but mechanically, they can't compare to the
Celwave PD455 that's up there now. You get what you pay for.

My IC-24AT becomes too hot to touch after extended transmission at
high power. It seems that PA modules used in HF have dismal
efficiency. At 13.8 V, the HT draws 1.5 A. The input is 13.8 V * 1.5A
= 20W, at output 5W, for 25% efficiency. The remaining 75% heat the
HT.

I am wondering if there exist RF modules that have higher efficiency.
Perhaps average transistor power amplifiers at RF have lower
efficiencies than those using tubes. For example, HF rigs have 100W
out at 200W in, for a 50% aggregate efficiency. I think that RF
tube amplifiers can easily reach 60% when operated in class AB (for
SSB linearity), and can reach 80% in class C (which is good for FM).
Just to present a contrary argument, transistor PA at about
100 KHz (called switched power supplies) have efficiency in excess of
90%. I think they operate in class D.

Perhaps this is too lengthy topic to discuss here. To be fair one
should include power to stages before PA, and cathode heating in tube

PAs.

3687. GAP Titan vs MFJ-1798 vs R-7 (?)

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-08 19:54:13 UTC
From: ap451@yfn.ysu.edu
Message-ID: <2t57l5$sg7@news.ysu.edu>
Source record: 265346
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

Since the magazines are too afraid to do a real head-to-head
comparison of the three no-radials all-band HF verticals,
why don't we try to put something together here? (The
get-a-beam and get-a-real-radial-vertical comments would
be unwelcome; the purpose would be to compare these three
space-compromise antennas.) Anyone who has had experience
with 1) the GAP Titan, a brand new no-radial 80-10 offering,
or its mini-radialed cousin, the GAP Challenger, 2) the
finally-shipping MFJ 10-band Model 1798, or 3) the 40-10
meter no-radial trap vertical, the Cushcraft R-7, please
forward your comments. I'll post a comprehensive summary.

Thanks.

CellWave is the current name for the company formerly known as Phelps-Dodge Communications Products. The Stationmaster is a very good antenna, and we have had good results with them as long as they are mounted in a way that they don't whip in the breeze. (Well, 40 mph winds aren't quite a breeze, I guess.)

I've heard that the most common failure is that the welds break when the antenna is installed in a way that it flexes in the wind. Ours that have been side-mounted on the tower have survived for more than a decade.

They are constructed of copper tubing and rod which is spot-welded together as alternating coaxial dipoles, cut to length to be resonant at the tuned frequency. They aren't real broadband, and to lower their frequency will typically take lengthening the elements, which is not trivial to do.

I have been told (but never confirmed) that the result of using one of these at a frequency below its designed freq is not only increased SWR and lower radiation efficiency, but also that the resulting pattern tends to tilt skyward. With the tall mountains we have around here, we have often ordered the Stationmasters with a 5 degree downtilt in the pattern to improve coverage of cities near the base of the mountains.

I know that the 154 Mhz stationmaster that I inherited from a local taxi company worked very poorly at 2m.

The Diamond is a very nice antenna - I use them on the ground a lot - but I don't judge the ruggedness to be sufficient for the raw weather encountered on many mountains. I've considered making a radome for the antenna out of some fibreglass tubing from the plastics store, or perhaps ABS sewer tubing from the home improvement store, filled with that foaming spray-can insulation. Haven't tried it yet.

We've had good luck with the 'four-pole' style antennas - four or six or eight stacked dipoles on a mast. They're reasonably rugged, but they don't survive 8 to 10 radial inches of ice unless they're made of solid rod, welded. The ham-grade ones made of aluminum tubing didn't last the whole winter, and believe me, climbing a 75 foot tower on a 6,000 mountain when both are covered with ice is not my idea of a good day.

I'm pretty sure that vhf/uhf is pretty much banned. Spectrum is pretty tight there and they don't allow that stuff. HF is real stringent there too with a lengthy/complex license requirement.

I've spent 5 months there over the last few years. Knew a few local hams (Americans). Check at the ham stores in Sim Lim Square and Tower for more info.

Hi Everybody 8 June 1994

I know this is late but I have just returned from a few weeks of
vacation. Lets give it a try to get a full list, since I already
have a few requests to see an article in the Globe similar to the
one W1BG and I have run the last two years. At least you all
should have your sites confirmed by now :-)

****

The firm absolute deadline for me having your info is Tuesday
June 14th at 1PM.

****

Subject Field Day Publicity

Send me your FD QTH

I am working at getting an article on Field Day and Ham Radio in
general published in the Boston Globe. The draft is close to
done and I think there is a good chance to get it in the Sunday
Globe the week before FD. The article invites the reader to
visit the local club operation, I hope to have a box after the
article listing FD sites thruout the area. If you would like
visitors please send me the club name, field site and town.
We also need a contact person and phone number for public information.
^^^^^^^^^^^^
I will try to fit in as many as we can.

I think clubs from NH EMA and RI would be appropriate.

Remember NO Guarantees; there is only a good chance the article
will get published and I have no idea how many clubs will fit if
they do take it :-(

Repeated discussions with several manufacturers as well as personal experience have convinced me that this isn't a real problem but more or less an explanation people have come up with for why their antenna has failed. That's not to say that not using an upper support arm isn't necessary - it has the added benefit of preventing pattern distortion as the antenna flexes, and the reduced flexing can't hurt either.

>They are constructed of copper tubing and rod which is spot-welded

Not all of them use coaxial half-wave sections. Some manufacturers use series-fed 5/8 wave sections with phasing/matching coils. Antenna Specialists uses a J-pole-like feed at the bottom and 5/8 wave radiators.

As you go below the resonant frequency, the pattern tilts downward. Easy to remember - go lower in frequency, pattern goes lower. I have a couple of 450-460 SSM's that I use for receive-only sites - they work very well as they provide a slight amount of negative beamtilt, and at UHF, the bandwidth is pretty broad so receiving on the high end of 440 isn't a problem.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 8/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 8 JUNE AND FORECAST UP TO 11 JUNE

IPS Warning 16 was issued on 08 June and is current
for interval 11-13 June.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 080/020

1B. SOLAR FORECAST
09 June 10 June 11 June
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 080/020

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly quiet to unsettled

Estimated Indices : A K Observed A Index 7 June
Learmonth 11 2324 3222
Fredericksburg 10 16
Planetary 12 17

Observed Kp for 7 June: 4343 3323

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 Jun 10 Quiet to unsettled.
10 Jun 16 Unsettled to active.
11 Jun 20 Unsettled to active.

2C. MAGNETIC COMMENT
Geomagnetic activity is expected to increase to active levels during
the interval June 11-13. This increase in activity is expected due to
a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Jun normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Jun normal normal fair
10 Jun normal fair poor
11 Jun normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Degraded global HF propagation conditions are expected in association
with geomagnetic activity forecast for 11-13 June. (Coronal hole).

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 08 June: 19

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
09 Jun 25 Near predicted monthly values.
10 Jun 25 Near predicted monthly values.
11 Jun 20 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Degraded HF comms expected during interval June 11-13.

>Jeff, how about giving all of us a break, and if you don't have serious
>comments about the topic of the thread, then simply QRT.

Seems you should take a bit of your own medicine, OM, since your remark
has nothing to do with the thread. It has become glaringly obvious that
you desire to be moderator of this topic, and that when someone disagrees
with your stance you retort with ``your remarks are not resolving this
issue <blah blah>...''

Reread what you said above: ``...50,000 hams within simplex range...''.
Do you realize how ridiculous you sound whining for access on repeaters
that don't want you just so you can yake at a few hundred more folks?

This entire thread is ridiculous - when you use a repeater you're using
twice the spectrum that's actually needed to carry out your communication;
you cry about spectrum management yet tie up *two* frequencies every time
you key your xmtr, when in actuality you could very well use a single
frequency to talk to that same person. You're relying on other peoples'
radios (repeaters) to radiate more-than-needed RF thus limiting other
people's use of that same frequency.

Is that person too far away to communicate via simplex? Then try a band
that suits the range: groundwave on 160M or 80M comes to mind.

Jeff NH6IL

3699. Need service manual for Yasu FT270R

NOTE: The Effective Sunspot Number for 07 JUN 94 was 15.9.
The Full Kp Indices for 07 JUN 94 are: 4- 3+ 4+ 3+ 3o 3- 2+ 3-
The 3-Hr Ap Indices for 07 JUN 94 are: 24 19 34 20 15 13 10 14
Greater than 2 MeV Electron Fluence for 08 JUN is: 9.0E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. A new region was numbered
today as Region 7732 (S09W27).

Solar activity forecast: solar activity is expected to be
very low to low. The four regions currently on the disk have
the potential for producing an isolated C-class flare.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours. Brief periods of active levels
at mid-latitudes and minor storm levels at high latitudes
were observed during nighttime sectors. Energetic electron
flux levels (GT 2 MeV) were at high levels for the period.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled for the first day of the period
and becoming active for day three and four of the forecast.

Event probabilities 09 jun-11 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 09 jun-11 jun

A. Middle Latitudes
Active 20/25/25
Minor Storm 10/15/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 30/35/35
Minor Storm 10/15/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
Normal propagation should continue over the next 24 hours.
However, another recurrent coronal hole is expected to elevate
levels of geomagnetic and auroral activity and degrade
communications (primarily on the higher latitude paths)
beginning on 10 June.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep

V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

3701. Looking for walkman to pull in those weak AM stations...

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-09 04:31:35 UTC
From: hacker@access1.digex.net
Message-ID: <2t65v7$4ig@access1.digex.net>
Source record: 265358
Cross-posted to: dc.general,rec.radio.amateur.misc

Once again I petition thee, the all-knowing Internet, and appeal to thy ultimate wisdom...

I work in Reston Virginia, which lies about 10 miles away from an AM radio station I listen to in Maryland. This would be the one and only WPGC... business (read infomercial :-) radio 1580. I can barely pick up WPGC on my car radio in Reston. Inside the office building I work it's impossible to pick up WPGC, at least on the AM/FM radio I have.

Question: Can anyone recommend a "walkman" type radio that will pick up these weak AM stations even in office buildings from far away?

Yes, I know about the specially modified GE superradio that picks up FM subcarriers, however this radio is a big hefty fella and has little use outside the office.

So the bottom line is... any walkmen that are phenominally sensitive?

> Is it normal for the HTX-202 to warm up on low power as well as
> high power?

Mine will warm up SLIGHTLY if I use it very heavily (an hourlong QSO).
On high power, it will of course get quite hot.
Be sure to install the supplied metal belt clip -- it's a heat sink!

You said a friend has an HT that doesn't heat on low power -- is his "low"
the same wattage as your "low"?

Regarding your power supply: I have the service manual here -- according
to the factory specs, the HTX-202 is quite forgiving when it come to input
voltage.

huh??? CW? QRZ the QRZ? goin' QRT? gee... folks who actually speak the language are the ones who determine what proper usage. I've been a ham since 1967 and an swl for several years before that. I think that the very first issue of QST I ever saw (circa 1964 or so) had some poor sod babbling about CW prosigns being incorrect usage on 'phone.

Hey, common guys, give it a rest, huh? If an abbreviated version of a word or sentence makes CW more efficient, it will likely make 'phone more efficient also - if it translates well. Heck, as near as I can tell, the practice of using CW prosigns on 'phone actually predates the EXISTANCE of CB. We hams did it ourselves and there's nothing wrong with it. Those who disagree are obviously victims of the wizzing rettysnitch and may require repeated applications of the wouff hong to effect a cure!

I sold a microphone who can work with approximatly the totality of
HF transceivers.

This is a : ZETAGI MB+5 (made in Italy).

Caracteristics : Pre-amp. + dynamic compressor (+35 Db)
Ceramic type
Vu-meter
2 faders : 1 for Volume, 1 for Bass/Treble amount
power supply by a 9Volts battery.
Good HF grounded

This microphone is new (1 month old), cabling now for PRESIDENT LINCOLN
Sale with original pack and user manual.

PRICE : 250 FF or best offer.

REM : I can sale it out of France.

TNX.

********For Sale*******
****AOR2800 Scanner****
Wife says I have to many toys, So, I must say
goodbye to some of it for cash. (I guess she
wants to spend some of our money too!) :)

This scanner was purchaced from Ace Communications
1 year ago, for $449.00 plus shipping. It is in
mint condition, and has everything it came with,
except the box. (Wasn't that great of a box anyway!)
Selling price: $325.00, I pay shipping.
Terms: Money Order or Cashiers check ships same day
Personal check must clear first. No COD.

Trades: May be interested in NEWER computer periphials
or components (NO 8088, 286, or 386SX16 junk please!)
All mode TNC, Misc. Ham gear (Keyers, paddles, Antennas
etc.) These may be partial trades with cash, or full.

Features:

AM, NFM, WFM, SSB w/BFO
Coverage; 500KHz-600MHz 800MHz-1300MHz
Sensitivity: .35uV Narrow FM
1.0uV Wide FM
1.0uV AM

Step Increments; 5-995KHz

1000 Memory Channels
1000 Search Channels

This unit works flawlessly, and is guaranteed against DOA
Does HF Ham bands and SW Great! (If you are wondering why
the cut-out between 600MHz and 800MHz, it is to prevent
front end overload from strong TV stations, which is the
only thing you mis by not having those frequencies)
Comes with manual, Antenna, Power supply and a nifty acrylic
desk stand, and a cigarette lighter plug.

If interested, send E-Mail to ronh@pacifier.rain.com

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS

FLEA all SUMMER at MIT
June 19th, 1994
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)

Walt, where did you or those you allude to get the notion that someone HAS
to talk to you on the amateur bands? There's no requirement that someone
MUST answer your CQ on the low bands either. Amateur radio operation is a
privelege granted to those who meet technical requirements, but
conversation is not a granted right that accompanies a license. I am
certainly allowed to ignore someone calling on 2M just as I can ignore the
dog barking next door.

Open repeaters weren't the original issue in the thread (which is still
running in r.r.a.policy, by the way). The issue was the refusal of a
coordinating committee to allow more than one repeater per channel, despite
the FCC requirement for channel sharing and non-exclusive use of any given
frequency.
IMHO the problem is MORE severe in the 2M band than at 440, although the
ridiculously high number of linked machines which simultaneously broadcast
the same information on 6, 2, 220, 440, and 1296 compund the problem in all
bands.

Roger, from your callsign I can see that you hold a high enough class of license to know that you can either personally fill some of that underutilized spectrum with your own repeater, or join one of the smaller special interest groups that utilize 440 for their amateur radio activities. Open repeaters weren't the issue, access to spectrum was and continues to be the problem.

Hi, Mike. If that's a 16 pin tone generator, I think you will find the input for column 4 on pin 9. There are seveal types of keyboards so I can't tell you whether to pull it up or down or what but that should be the input. To check this out, see if the other inputs are as follows: C1 - Pin 3, C2 - Pin 4, C3 - Pin 5, R1 - Pin 14, R2 - Pin 13, R3 - Pin 12, and R4 - Pin 11. The C means Column and R means Row of course. Good luck.

: 10 khz or 15 khz or neither for that matter! Any input would be appreciated.

Vincent, it's going to depend on your areas local conventions. Parts of
the country uses are 15 KHz channel spacing, other parts are 20 KHz though
even that doesn't necessarily dictate which is used in your immediate
local area.

Your best approach is to ask whoever your local frequency coordnation
is. Usually they have a "suggested" simplex frequency list.

>meter no-radial trap vertical, the Cushcraft R-7, please
>forward your comments. I'll post a comprehensive summary.

The only antenna of the above with which I have experience is a
GAP Voyager IV - which is a compromise antenna - no kidding. Is that
similar to a GAP Titan? This antenna is 45 feet tall with a six foot dia
top hat. Worked well on 40, mediocre to bad on 20, bad on 80 and sucked
boulders on 160. Since you do not want to hear about real-radial-vertical
I will not bore you with the details of how a Cushcraft AP8A beat it in
every band in head to head comparison for DX reception. Yes, the AP8A has
four sets of five radials (for different bands) in a ground plane
configuration, abt 10 ft off the terra firma.

I have counseled a number of hams in my club to use regular multiband verticals
with radials instead of the much more expensive compromises. It is not question
that an R7 requires much less real estate. However, the radials are not that
hard to put up. Even one radial will provide good but directional coverage.
You can load them with coils, lay them on a roof (not great but better
than having a 3 foot stub), bend them etc preferably not slope up or switch
back.

The thickness and durability of the fiberglass radome is a major consideration, and since these are hand-built it controls the antenna price much more than the price of the copper inside does. After a winter on a New England mountaintop, you begin to see why the Diamond sells for less. Also remember that Diamond and most other imported antennas have gain ratings in dBi, which is 2.1 db more than the dBd rating!

> We were given a Phelps-Dodge antenna. Freq tag removed. I know for a fact

> Any help?

First things first. Celwave purchased the old antenna manufacturing portion from Phelps-Dodge Copper Co. several years ago. Celwave itself is a division of Radio Frequency Systems. So when people talk about Phelps-Dodge antennas today, they really are refering to Celwave RFS. Celwave owns the trademarks "Stationmaster" and "Super Stationmaster" among many others.

Next, call Celwave at 1-800-321-4700 to obtain their current "Product Selection Guide #191" catalog. The local distributor also should be able to give you one to inspire you to do business with him! Most of the information you need is in there, but I'll summarize it here for all to read.

Last, the people who advised you are correct, but not for the reason you think. Read on for details, and you'll see why a brand-new PD220 is the best way to go,
followed by a used PD220 in the 151 to 159 ranges.

> I've been offered yet another antenna, I'll have to pay for this one, that has
> already been in service in the amateur band. The owner thinks the model
> number is PD-220. Cell Wave I believe.

The PD220 is the Super Stationmaster, a rugged implementation of their patented colinear dipole design. It is rated at 4.8 dBd in the 2M band,

overall length 22 feet; the support pipe at the bottom is 2-3/4" OD and
about 30" long in the ham band model. The ranges are suffixed as follows:
PD220-1 136 to 144 PD220-2 144 to 148 PD220-3 150.5 to
158.5
PD220-4 151.5 to 159.5 PD220-5 155 to 163 PD220-6 162 to 170
PD220-7 166 to 174 PD220-8 216 to 225

> We've contacted a local distributor regarding the purchase of a new antenna.
> Cell Wave PD-200. Big bucks. Distributor says this antenna is 21 feet long.
> I'm also not sure I've got the model prefix correct.

The PD200 is the regular Stationmaster, a lighter duty version rated at 5.8
dBd. The element housing length is 19 feet, the antenna is only 1.13 sq ft
wind area, and the support pipe is smaller (2-3/8" OD) and shorter (22").
It was NOT designed for wide bandwidth, only 1.5 MHz at 1.5 VSWR, so you
specify the center frequency when ordering and you can't reuse them in a
different part of the commercial spectrum or amateur band. They all show
the same number PD200 on the tag.

> Now, what is the difference between the 200 and 220? Anyone know?
>
> So now I have reference to three different antenna lengths, 20, 21 and 22
> feet. How are these lengths measured and/or specified? Radome length? Bottom
> of base to top of radome?

Ignore the lengths and go strictly by the model numbers when you can. It's
what is inside the radome that matters, not the dimensions of the
fiberglass housing. The most important thing is the model tag, because it
tells you two important things: What frequency range the antenna was built
on, and what frequency it was tested on.

In your case the statement that the antenna is 20 feet long means that it
is PROBABLY the PD200, which is incapable of operating efficiently on 2M
when built for 152.x MHz. You can verify my educated guess by checking the
OD of the radome at the end where it joins the metal support pipe.

> If I find a used one, what key factors should I be looking for? What can and
> cannot be modified? I'm looking for personal experience and opinions but
> please state where your comments are from in any replys. If one can be
> modified from the commercial service then what is the proper way to do this?

Don't try to disassemble it and lengthen the elements; you'll damage it
beyond repair and you never get the radome watertight again! There is no
external tuning adjustment; these are custom-built and custom-tuned
professional grade antennas. Instead, take advantage of one of the unique
advantages of an end-fed broadband colinear: the ability to get a slight (3
to 4 degree) downtilt of the main lobe if you drive the antenna at about 5%
below its cut frequency. Thus if you put 146 MHz into a 152 MHz PD220
antenna, the VSWR will only be about 1.9 and the main lobe comes down from
horizontal by about 3-4 degrees so you aren't shooting so many precious
ERP-watts (new term, Gary?) into the solar system. You can't do this with
the PD200 because its "Q" is too high.

> What is the right way to take one of these babies apart? The one that was
> given to me has a UHF connector inside the base and two allen screws on either
> side of it about 2 inches further inside the base. It also has three screws
> on the exterior of the metal base just below the radome. Before I end up with
> a pile of junk, what needs to come out to get at the interior? Once I get to
> the interior what needs to be done to retune the elements. I know the need to
> get longer to lower the frequency, but how? Will it be obvious once I get it
> apart? If not convertable for use at 146Mhz then how about for use at 446 Mhz
> were the elements need to get shorter?
>
> Gary I'm expecting some answers from you.

Gary, I owed you one so I thought I would pay off early before the interest
rates went up again! Feel free also to add or modify from your experience.

Actually, what REALLY happened is that The Old Man went to Singapore, and
came back with the Dreaded Wouff Hong, which is actually what's used as
punishment for criminal offenses.

The rattan cane is what they SAY is used because at least it would be con-
sidered humane...

Beware the Dreaded Wouff Hong...

Run #12 or larger (stranded) from radio directly to the vehicle
battery. Both sides, + and -. The battery acts as a BIG filter/
condenser. Be sure to put fuses at battery ends. We don't want
to melt the wiring if it shorts! This has been the top-of-the-

list for me.

How should we cite you? Article <2t2dgn$a4b@news.iastate.edu>?
The New York Times Manual of Style and Usage says: Plurals of . . . figures.
These plurals are usually formed by adding 's as in . . . size 8's.

:-)
'Course the Associated Press Style Book says, "No apostrophes, an exception to
Webster's New World guidline under 'apostrophe.'" And Turabian, too,
specifies, ". . . s alone (i.e., not apostrophe and s)"

HAMFEST/COMPUTERFEST CALENDAR 1994 - NORTHERN ILLINOIS
last updated June 9, 1994 |

o Please report additions or changes to Bob Parnass,
AJ9S, office phone: (708)979-5414, electronic
mail: parnass@ihlpf.att.com.

JUNE

June 5, Sunday: Princeton, IL - Starved Rock Radio
Club. Bureau County Fairgrounds. Admission $5.
Talk-in 146.355/955. Info, Bruce Burton, KU9A
(815)795-2201.

June 12, Sunday: Willow Springs, IL 6 Meter Club Ham-
fest, Six Meter Club of Chicago. Santa Fe Speedway,
91st Street and Wolf Road. Admission $5. Gates open
6AM. Talk-in on 146.52 simplex or 146.97 repeater.
Info, call Joe Gutwein, WA9RIJ, at (708)963-4922.

JULY

July 24, Sunday: Stickney, IL - DuPage ARC hamfest,
Hawthorne Race Course, 3500 South Cicero Ave. Handicap
accessible. Starts at 6 AM. Talk in on 142.25 MHz
with 107.2 PL. (-600). VE Testing 9 - 12. Advance
tickets are $4.00, $5.00 at the door.

This hamfest used to be held at the American Legion in
Downers Grove and was a good small to medium-sized ham-
fest. This year, there will be a 30,000 square foot
indoor exhibit area in an air conditioned building,
plus outdoor tailgating.

For advance tickets, send check payable to DARC,
enclose SASE, and send to Hamfest 94, 7511 Walnut Ave,
Woodridge, IL 60517. For commercial or fleamarket
tables info, call 708-985-9256.

July 31, Sunday: Sugar Grove, IL - Fox River Radio |
League (FRRL) Hamfest, Waubonsee Community College, |
Route 47 at Harter Road, 5 miles NW of Aurora, IL. Set |
up Sat 7 PM, Sun 6-8 AM, open to public 8 AM. Commer- |
cial dealers, flea market, computer vendors, refresh- |
ments. VE session: 10 AM (bring original license, a |
copy of license & photo ID). Free parking, camping |

nearby. Talk In on: 146.58/147.66. Adm: adv $4, door | $5. Table: 8 ft $10. For advance tickets and informa- | tion contact: Fox River Radio League, Box 673, Bata- | via, IL 60510-673 or call Diana Skube, WD9API (708- | 293-7485), or Mark Hougaard, KB9FCC (708-810-1805).

July 31, Sunday: Racine, WI - Racine Hamfest, Sponsor: Racine Megacycle Club - W9UDU South Hills Country Club, East Frontage Rd. I-94 Between Hwy 20 & K. Advanced admission SASE & $3.00. Send to: RMC P.O. Box 3 Racine, WI 53401. Information: 414-554-7565 - WB9USI

AUGUST

August 6, Saturday: Goshen, IN - Elkhart County Ham- fest Sponsor: Elkhart County Radio Association Elkhart County 4-H Fair Grounds. 8AM to 3PM Advanced Tickets (till 7/1) $4.00, $5.00 at Gate. Send Ticket Requests or Table Reservations to: Elkhart County Hamfest, 20294 C.R. 36, Goshen, IN 46526 Information: 219-533-7632 - Jocelyne WZ9M

August 7, Sunday: Peotone, Il - Hamfesters Hamfest Will County Fairgrounds, Peotone, Il. Take I-57 South to Peotone Exit 327 (East). Flea market open 6:00am - 3:00pm. Tickets $4.00 advance w/double stub & $5.00 at gate w/single stub. No additional charge for flea market space. For advance tickets and information con- tact: Hamfesters Radio Club, Box 42792, Chicago, Il. 60642 or call Amateur Radio Info-Line: 1-708-535-AHAM

August 28, Sunday: Woodstock, IL - Tri-County Hamfest, Sponsor: Tri-County Radio Group, Inc. McHenry County Fairgrounds, Rte. 47 Junst North of Rte. 14. (Only 14 miles North of I90 on Rte. 47.) Advanced Tickets: $4.00, At The Door: $5.00 For advance tickets send check to: T.C.R.G., P.O. Box 3107, Skokie, IL 60076-6107 Information: 708-658-1678 Talk in on: 146.52

SEPTEMBER

September 11, Sunday: Joliet, IL - Bolingbrook ARS Ham/Computerfest, Inwood Recreation Center, 3000 W. Jefferson. This is a medium size hamfest with indoor/outdoor flea market. Gates open 8 AM for gen- eral public. Outdoor flea market on paved lot -- setup at 6 AM. Use Exit 253 from I55, or Exits 126/130 from I80. Admission $5. VE testing 9 AM - 12 noon. Bring original license and photocopy, ID and photo ID, plus $5.75 test fee. Novice-only tests are free. Talk-in 147.33, 224.54, and 443.525 MHz repeaters. Indoor

table reservation, call Ed Weinstein at 708-085-0527. Info, BARS Hotline (708)759-7005 between 6 AM and 9 PM.

September 17-18, Saturday & Sunday: Peoria, IL - Superfest. Admission $5. For more info call (309)685-6698. Talk in on 146.76 (-600 kHz offset).

September 24-25, Saturday & Sunday: Grayslake, IL - Chicago FM Club, Ham Radio Expo. This is a large hamfest with indoor and outdoor flea markets. Lake County Fairgrounds, Rts 45 & 120. 6AM - 6PM. Info 146.76 MHz (-600). Admission $6 at gate, one ticket good for 2 days. Kids under 12 free.

OCTOBER

October 23, Sunday: Waukesha, WI - Kettle Moraine Hamfest Sponsor: Kettle Moraine Radio Amateurs Waukesha County Exposition Center Forum Building, Highways J and FT All orders MUST be accompanied by a SASE and mailed to: KMRA Swapfest, P.O. Box 411, Waukesha, WI 53187-0411 General Admission - $4.00 ($5.00 at the door)

NOVEMBER 1994

November 19-20, Sat.-Sun.: Fort Wayne, IN - Fort Wayne Hamfest Sponsor: Allen County Amateur Radio Technical Society (ACARTS) Allen County War Memorial Coliseum Exposition Center Admission: $5.00 (No advance ticket sales.) For information or table orders, send a SASE to: ACARTS, P. O. Box 10342, Fort Wayne, IN 46851 or call John Rufner at 219-483-6305 (table info) Don Gagnon at 219-484-3317 (general info)

Nov 27, Sunday: Wheaton, IL - GMRS of Illinois May Fest '94. Admission $5. Starts 8 AM. Setup 6 AM. Info, call (708)690-1492.

COMPUTERFEST SCHEDULE

September 17, Saturday: Kankakee, IL - Computer Fest 1994. Sponsor: Kankakee River Valley Computer Users' Group. Kankakee County Fairgrounds 9:00 a.m. to 3:30 p.m. Admission $4.00. Information: 815-935-8590 or 815-935-1605>

Computer Central, College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547 $5 with card Normal admission $6.00 Opens 9:30 am - 3:00 pm

05/22/94, 06/26/94, 07/31/94, 09/18/94, 10/30/94, 11/27/94

3728. GB2RS News 12th June 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-09 17:50:58 UTC
From: dave@llondel.demon.co.uk
Message-ID: <771209458snx@llondel.demon.co.uk>
Source record: 265374
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 12th of June and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:-

Packet radio is to feature on BBC TV;

A Microwave Round Table meeting takes place next Sunday; and

Look out for an expedition to the Scottish Isles this week.

BBC Television cameras were at RSGB Headquarters last week filming for an item on packet radio to be featured shortly in the BBC2 series "The Net". The series deals with everything to do with computers and is broadcast at 8pm on Wednesday evenings.

An RSGB Microwave Round Table meeting takes place next Sunday the 19th of June at the Crawley Amateur Radio Club premises at Pease Pottage, near Crawley, West Sussex. The event is organised by the RSGB Southern Microwave Group and commences at 10am. The attractions include technical talks, calibration and alignment facilities, and the usual round table discussions on current matters of interest. There will also be a bring and buy stand, as well as hot drinks and snacks. All are welcome. For further details telephone Mike, G3LYP, on 0494 881298.

An expedition to the Western Isles of Scotland starts today, Sunday the 12th and continues until next Friday. GM7BXA, GM7HSP and GM7DKX are scheduled to operate on VHF from the Isle of Mull today, the Isle of Skye on Wednesday, South Uist on Friday, Benbecula on Saturday and North Uist next Sunday. Operation will start at around 9am and will continue until 10pm on 144.222, 50.122 and 50.222MHz, plus the calling frequencies. HF activity will be provided by GM0NEB on 80, 40 and 20 metres CW and SSB.

Last weekend RSGB HQ held its annual open day. Despite continuous rain, everyone who attended had a good day. Next year's HQ open day is scheduled for Saturday the 17th of June 1995. If you haven't been to the Headquarters building, put this date in your diary now.

Last Sunday, another RSGB Regional Meeting took place, this time at Brighouse in West Yorkshire. Members and non-members came along to meet members of staff and volunteer officials, and a lively discussion took place. The next Open Meeting is on Saturday, the 22nd of October in Bristol.

There is still time to nominate someone under eighteen for the prestigious title Young Amateur of the Year. This annual award is sponsored by the RSGB and the Radiocommunications Agency, together with representatives from the amateur and professional radio industry. In addition to the title, the winner and runner-up qualify for a number of prizes. If you know of a young person who could qualify, do not hesitate to ask for a nomination form. Full details of the Young Amateur of the Year award can be found in the April edition of RadCom, or can be obtained by telephoning Justine Hodges at RSGB Headquarters on 0707 659015.

The callsign GB5GS will be aired from the Goodwin Sands on the evening of Thursday the 23rd of June by members of the East Kent Radio Society. This will be a new WAB square for many as it is normally under water. Operation will be from approximately 6.30pm to 8pm, depending on the tide, on the 80 and 40 metre bands.

The North Wakefield Radio Club and the Barnsley Radio Club have combined to form the "Yorkshire Pudding Contest Group" under the callsign G4OOC. This call belonged to the late Jack Martin who was a much liked and well known character throughout Yorkshire and was reallocated with the permission of his family. The callsign will be used for all of the clubs' combined contests as a mark of respect and to honour the many good deeds that Jack Martin did in the name of amateur radio .

A new RSGB Liaison Officer (RLO) has been appointed for Hertfordshire. He is John Rudd, G7OCI, and his address is 23 Grange Gardens, Ware, Hertfordshire SG12 9NE. His telephone number is 0920 466639. RLOs hold a wide range of information and they are available to help any RSGB member seeking advice.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Zambia, JF2XTZ is now active as 9J2CW and hopes to visit other countries in Africa during his stay in Zambia.

And from the Marianas, SM6FJY will be active as KH0/SM6FJY from tomorrow Monday the 13th, until Sunday the 26th during the first part of his Pacific Islands tour.

Now the rallies for today, Sunday the 12th of June:

The Elvaston Castle National Radio Rally is being held at the Elvaston Castle Country Park. The show ground is five miles south east of Derby on the B5010 road and is well signposted. The rally features many trade stands, covering radio, electronic and computer products, and a bring and buy marquee. Also featured is a craft marquee, a flea market, refreshments, live bands and children's entertainments. Talk-in is on channels S22 and SU22.

The Royal Naval Amateur Radio Society Annual Mobile Rally is at the Sports Field, HMS Collingwood, Fareham, Hampshire. To get there, leave the M27 motorway at junction 11 and follow the A27 to Fareham. Doors

open at 10am. The event features many trade stands, a bring and buy sale, a flea market and local club and repeater group stalls. Also featured is an arts and crafts exhibition, a range of entertainment for all the family, and refreshments. Talk-in will be on 2 metres and 70 centimetres.

Next the four rallies we know of for next Sunday the 19th of June:

The Belfast Radio Rally is to be held at the Chimney Corner Hotel, 630 Antrim Road, Glengormley. The rally features the usual trade stands, a bring and buy stall and many other attractions. For further details phone 0232 471370.

The Bury St Edmunds Amateur Radio Society Car Boot Sale is to be held at the Scout Pavilion Stanton, off the A143 road. Doors open at 10am. The event features trade stands and a Raynet supplies stall. Light refreshments will be available. Talk-in by G2JO is on 2 metres. Further details are available from Jim, G0MEV on 0359 50271.

The Denby Dale and District Amateur Radio Society Annual Mobile Rally is to be held at Shelley High School, which is midway between Huddersfield and Wakefield on the B6116 road, two miles from its junction with the A636, Wakefield to Holmfirth road. Doors open at 11am. The event features trade stands, craft stalls, a bring and buy stall and a car boot sale. RSGB Morse Tests will be available on demand but participants must bring two passport size photographs. Refreshments will be available and talk-in is on channels S22 and SU22. Further details from Phil, G4FSQ on 0484 644872.

The Newbury Car Boot Sale is to be held at the Acland Hall, Cold Ash, near Thatcham, Newbury. The sale starts at 9am, with set-up time from 8am. Talk-in will be on 2 metres channel S22 by GB4NBS. Further information from Richard, G3ZGC on 0635 46241.

The Preston Amateur Radio Society regrets that due to circumstances beyond its control, the Preston Annual Rally planned for the 4th of September has had to be cancelled. For further details contact the Rally Secretary, George, G3ZXC on 0772 718175.

HF contest news now:

The World Wide South American CW Contest finishes at 1500 UTC today, Sunday the 12th. The event covers all bands from 3.5 to 28MHz, excluding the WARC bands. See June RadCom page 19 for further details.

The All Asia CW Contest is scheduled to take place next weekend, starting at 0001 UTC on Saturday the 18th and finishing at 2359 on Sunday the 19th of June. The event covers all bands from 1.8 to 28MHz, excluding the WARC bands. See June RadCom page 19 for further details.

Next some VHF contest news:

The RSGB 70MHz CW Contest takes place today, Sunday the 12th from 0800 to 1100 UTC. For further details see February's RadCom page 83.

Immediately following this event, the second RSGB Backpackers 144MHz portable contest takes place. This is an SSB and CW event from 1100 to 1500 UTC. Full details can be found in the January edition of RadCom.

Also today, Sunday the 12th, the third RSGB 24GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC. See April RadCom page 82 for further details.

The RSGB 432MHz FM Fixed and Open Contest is on Saturday the 18th of June from 1800 to 2200GMT. See April's RadCom for details.

Special event stations this week include:

Members of Royal Air Force Finningley Amateur Radio Society will use GB800DON for Doncaster's 800 years Festival Celebration at the Gala event at Cusworth Park. Operation will be from 0800 to 1800 UTC using the HF bands, on CW and SSB and FM and SSB on 2 metres and 70 centimetres. The Locator is IO93JM and the WAB square is SE50.

GB2SM, will be active next Friday the 17th of June, during International QRP Day, from 1000 until 1600 UTC on the 40 and 20 metre bands from the Science Museum. Operation is also planned for next Saturday the 18th and Sunday the 19th on 80, 40 metres bands and 70 centimetre band, to encourage Novice contacts with the station.

GB0TPR, will be aired by the Meirion Amateur Radio Society from the Northern End of the Promenade at Barmouth next Saturday the 18th of June. The occasion is the Three Peaks Sailing and Climbing race from Wales to Scotland. For further information contact Maurice, GW3GKZ on 0341 422447.

And now the solar factual data

The extended period 27th May to the 5th June has seen very low solar activity. No flares of any sort were reported, but continuing geomagnetic activity due to coronal holes and disintegrating filaments have affected the HF bands. Sporadic E has been reported on ten and six metres most days covering all of Europe.

Sunspot indices have been zero every day. A disintegrating filament on the 4th of June added to the very high electron fluence levels and the resulting high geomagnetic activity. Solar flux levels not surprisingly have tended to decline slightly, varying day to day, and averaging 68 units. The 90 day flux mean was 82 on the 4th June. The state has been 'nil nothing to report'.

The geomagnetic Ap indices started quiet on the 27th but rose to storm levels by the 28th and full storm by the 30th, with Ap levels being up to 49 units in Europe. Scottish type auroras were reported and levels were beginning to decline by the 5th June as this bulletin was being prepared. The period averaged Ap indices of 26 units.

The aa indices, as supplied by the British Geological Survey for the 24th to the 30th of May, were unsettled. The 27th, which showed up as a

pre auroral enhancement, was very quiet being only 10.6 nanoTeslas. The 28th saw full storm levels of 192 nanoTeslas during the aurora. The period averaged 42.2 nanoTeslas. The X-Ray flux levels, not surprisingly, have dropped to very low levels, being only A1.0 every day. The monthly sunspot mean for May was RI 18.2, with the maximum of 39 on the 17th and a minimum of zero from the 26th to the 31st. The smoothed count for November 1993 is 41.3 +/- 5.

I'll repeat the figures. Spots - 0; Flux - 68; Ap index - 26; X-ray flux - A1.0; Spot mean May RI 18.2.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon {pronounced Mer-Don}, averaged 6.7MHz. The magnetic storm caused levels to drop to only 5.7MHz on the 31st and 1st. The darkness hour lows averaged 2.8MHz. Blanketing E was reported every day, partly due to Sporadic E and the auroras, with the 29th being affected for 8 hours. The darkness hour lows are tending to rise due to the seasonal changes and averaged 2.8MHz.

I'll repeat the figures. Highs - 6.7MHz; lows - 2.8MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg have been affected by the magnetic storms and some readings were not possible, but the highs averaged about 6.0MHz and the darkness hour lows 3.1MHz.

The very high levels of electron fluence are affecting some satellites by charging up the outer case with static of such intensity that the computers inside cannot function correctly.

I'll repeat the figures: Highs - 6.0MHz; lows - 3.1MHz.

And lastly the solar forecast:

This week the more active side of the sun will be coming into view. Solar flux levels are expected to be about the 90s, and the geomagnetic activity is expected to decline by the 15th to quiet levels. Summer conditions are now affecting the HF bands. In the south, during daylight, MUFs are expected to be about 21MHz, and the darkness hour lows 14MHz. Northern stations should see better HF band conditions than of late, with the expected decline of magnetic activity, though levels will be slightly down against the south. Sporadic E could be widespread particularly on ten and six metres.

And that is the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Yankee and G7 Sierra Kilo series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Charlie series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast
in the 80m, 40m, 6m and 2m bands.

: -Brian n8wrl

There is a shareware program WriteLog!, written by Wayne, W5XD.
It supports multiple rigs, (only one at a time), a number of popular
contests, keys the rig for CW (I think), and runs a DVK. I beleive it
also slices and dices. You probably can find a copy on oak.oakland.edu
or one of the simtel mirrors. I used it for a naqp and found to be fine.
There were some nice features. About the only thing I didn't like was the
log printing, but that really was more a personal taste issue. I think it
could interface with a TNC so you can run single op assisted, but I did
not check that out. I says it can be used with RTTY, but it certainly can
not compete with WF1B in that mode.

>Vincent, it's going to depend on your areas local conventions. Parts of
>the country uses are 15 KHz channel spacing, other parts are 20 KHz though
>even that doesn't necessarily dictate which is used in your immediate
>local area.

You can "use" any spacing you want for casual transmissions, as there
is no "official" FCC rule on this; for example, a lot of locals in
my area use 146.535 for simplex mobile. However, you may get flack
from some operators for not adhering to the ARRL Band Plan (which
specifies precise simplex frequencies between 146-147 and 147-148 MHz).

If you use FM during a VHF contest, use ONLY the ARRL-specified
simplex frequencies as called out in the Band Plan (they're listed in
the ARRL Repeater Directory) EXCEPT (a) you CANNOT use 146.52, and
(b) you CAN use other simplex frequencies as locally APPROVED by
the frequency coordinator(s) in your area. Note that I said
approved, NOT "agreed upon by an ad hoc group of local hams."

ZCZC AE32
QST de W1AW
DX Bulletin 34 ARLD034
From ARRL Headquarters
Newington CT June 9, 1994
To all radio amateurs

SB DX ARL ARLD034
ARLD034 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, The DX NewsLetter, the Ohio/Penn DX Bulletin, Randy, N0TG and Contest Corral in QST.

BURUNDI. Jean-Pierre, 9U/F5FHI, continues to be active on 21295 kHz between 1430 and 1630z. QSL via: Jean-Pierre Maidon, La Hee, F - Vertou, 44120, France.

CHAD. Another new station has been heard on 20 meter CW between 2000 and 2200z signing F5LGL/TT8.

ANGOLA. It was reported that Antonio, D2EGH, will be signing D3X for the next three weeks. There was no reason given for the special call sign, but his daily activity has been on 14195 kHz between 2000 and 0130z. QSL via CT1EGH.

SAINT PAUL ISLAND. Be looking for Paul, WC9E/CY9, Bob AA9GZ/CY9, Scott, N9JCL/CY9, Ken, WB9OBX/CY9 and Tom, K0SN/CY9, starting June 10 for a 4 or 5 day operation. Activity will be on CW, SSB and RTTY, on all HF bands. QSL via K0SN. Meanwhile, Randy, N0TG, reports that their upcoming CY9 DXpedition has been moved from July 1 to September 19 through 25. This early fall propagation should offer better conditions than a summer date. The boat charter has been reserved, Coast Guard landing permission has been received and the travel arrangements have been made. Operators will be Randy, N0TG, Bob, KW2P, Murray, WA4DAN and Ron, AA4VK.

SVALBARD. Tom, LA4LN, and Magne, LB3RC, will sign JW4LN and LB3RC/JW, respectively, from the western coast of Vest-Spitsbergen from August 1 to 20. This is a scientific expedition and NOT a DXpedition, but they will be operating all bands 160 through 10 meters with special attention to the WARC bands. Activity will be on CW, SSB and the digital modes in the mornings, evenings and when

the weather is bad. QSL direct only with SAE and return postage. Note that the LA4LN Callbook address is not correct. The correct address is: JW4LN via LA4LN, Tom Victor Segalstad, P.O. Box 15 Kjelsas, N-0411 Oslo, Norway. QSL LB3RC/JW via LB3RC, Magne Nicolaysen, Ostgaardsgt 23 B, N-0474 Oslo 4, Norway.

ITU HEADQUARTERS, GENEVA. Len KB2R, will be active during the IARU HF Championship Contest and two days before. This will be a single operator effort with 4U1ITU counting as an HQ multiplier for the contest. Activity will be on 80 through 10 meters and possibly 160. Two days before the contest, Len will be active as time permits on 80 through 10 meters CW and SSB and the WARC bands if antennas are available. QSL the entire expedition via WA2CJT, the bureau or direct to his 1994 CBA.

MARIANA ISLANDS. Jun, WH0AAV, on Saipan, was heard on 3795 kHz at 1240z. Also check the 14226 DX net around 0330z.

SOLOMON ISLANDS. JA1OEM/H44 will be active beginning June 10. Activity will be on all HF bands, but especially on 160 meters. QSL via JA1OEM.

CORSICA. Seven members of the Milan ARI will operate as TK/IK2QIN/p from June 15 to 20. They will be active on 80 through 10 meters, SSB, CW and RTTY with two stations on the air. QSL via Magni Renato, IK2QIN, Via Natta 15-D, 20151 Milano, Italy.

GIBRALTAR. ZB2BU will be active June 12 and 13 from Europa Point on the southern tip of The Rock.

MICRONESIA. The DX NewsLetter reports V63PA will stay on the island longer than expected. He prefers 14150 kHz around 2100z during the weekend. QSL via G6MDM. A group from the Oklahoma DX Association, OKDXA, and a few operators from the Pacific will have four stations up and running through June 17. Activity is on all bands with CW and RTTY. Look for V63AD, V63BC, V63FC, V63KW, V63SB and V63VA. QSL all calls via OKDXA, PO Box 88, Wellston, OK 74881.

CAYMAN ISLANDS. Randy, N0TG, will be active as ZF2GT from June 23 to 30. Emphasis will be on CW and the WARC bands. QSL via CBA.

THIS WEEKEND ON THE RADIO. The World Wide South America CW Contest, sponsored by Antenna-Eletronica Popular Magazine, is from 1500z June 11 until 1500z June 12. Operate CW only. Exchange RST and serial number starting with 001. For more details, see page 118 in June QST.

The ANARTS WW RTTY Contest, sponsored by the Australian National Radio Teleprinter Society, runs from 0000z June until 2400z June 12. All digital modes are permitted. No satellite contacts allowed. Exchange RST, Time in UTC and CQ Zone. For more information, see pages 136 and 138 in May QST.

The ATV Quest Contest, sponsored by ATV Quarterly, is from June 10 to 12. Operate the FSTV Sprints during any 36 hour period, SSTV Sprints during any 24 hour period. See page 119 in March QST for more details.

david-

The function buttons are "multiplexed", sharing the microphone's up, down and push-to-talk button lines. I don't have the exact data at hand.

I sometimes have trouble with functions being activated while using the up/down buttons. When function 1 gets activated, I can't procede with the up/down function until I manually press button 1. Does anyone else have this problem?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 9/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 9 JUNE AND FORECAST UP TO 12 JUNE

IPS Warning 16 was issued on 08 June and is current
for interval June 11-13.

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 083/024

1B. SOLAR FORECAST
10 June 11 June 12 June
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 8 June
Learmonth 07 2233 1211
Fredericksburg 10 09
Planetary 12 10

Observed Kp for 8 June: 4233 2222

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
10 Jun 16 Unsettled to active.
11 Jun 20 Active.
12 Jun 25 Active.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Jun normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Jun normal fair poor
11 Jun normal fair poor
12 Jun fair poor poor
3C. GLOBAL HF PROPAGATION COMMENT
Degraded global HF propagation conditions are expected in association
with geomagnetic activity forecast for 11-13 June. (Coronal hole).

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 09 June: 29

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
10 Jun 25 Near predicted monthly values.
11 Jun 20 Near predicted monthly values.
12 Jun 20 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Strong sporadic E observed at times. Degraded HF comms expected
during interval June 11-13.

From: Jim Flanders <jimflanders@delphi.com>
Message-ID: <h23sXU2.jimflanders@delphi.com>
Source record: 265447

The first rule in rfi is to attack the SOURCE of the interference, rather than try to prevent it from reaching it's destination.

I had an older suburban with the same problem. WhT i HAD To do was to put both resistor ignition wire AND resistor plugs. Suburbans have very High Voltage (HT) ignition systems. I also had to heavily filter the 12 volt supply line. (Some power was lost with the resistor wire/plugs)

Source record: 265453

Hi there,

I am getting a transverter from Down East Microwave and was thinking
of using it with my Kenwood TS-450 SAT. Anyone know if there is a low level
TX coming out on one of the many connectors on this rig? I would like
not to have to add a connector if tx appears somwwhere already.

Thanks for any help.

Backup choices are RCI-2950 (have to modify for low level TX) and
FT-107M (has transverter output, but not as nice to use).

3745. help with th-78a

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-10 04:39:51 UTC
From: n1ptt@netcom.com
Message-ID: <n1pttCr5zMG.E1q@netcom.com>
Source record: 265455

i wipped the memory on my th-78a, cant find manual...
how do i set frequency change on tow meters...
(i.e. want 145.230, get 145.2250, or 145.2375).....
also. how do i set minutes on its clock.....

73's and thanks....bob green

3748. Need Info On Old Tubes

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-10 04:59:31 UTC
From: larryr@netcom.com
Message-ID: <larryrCr60J8.K0F@netcom.com>
Source record: 265457

Posted by n6sle for kd6dt. Responses may be sent to n6sle.

What corporations manufactured military S-band (10-cm. wavelength) radar transmitting and receiving tube oscillators (magnetrons and klystrons) during World War II for the U.S. Navy and Army, and also for the British military; plus, what were the tube-type designations each corporation produced, e.g., Raytheon made both 2J26, 2J38, and 2J39 magnetrons as well as 2K25 and 2K28 klystrons? (Candidate corporations include Raytheon, Western Electric, Sylvania, Westinghouse, and Sperry.) Especially interested in learning tube-designations for magnetrons and klystron made by Westinghouse Lamp Division in Fairmont, WV, during 1943 and 1944.

Your help will be appreciated.

Thank you,
Don, KD6DT

3749. Re: License Renewal

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-10 05:22:00 UTC
From: st4j9@elroy.uh.edu
Message-ID: <10JUN199400224093@elroy.uh.edu>
Source record: 265456

In article <2st93f$6g7@lace.Colorado.EDU>, heuring@riker.cs.colorado.edu (Vincent Heuring) writes...
>
>What's the current procedure for renewing my ticket? And how soon
>can I do it before the expiration date?

The current procedure is to use the NEW 610 form for renewing the license.
The new form is marked on the upper right hand corner "Expires 8/31/96"
ALL older forms of FCC form 610 are OBSOLETE and the FCC will return any
applications submitted on older 610s without action.
To get the new 610 form, either write the the FCC directly at 1270
Fairfield Rd., Gettysburg PA, 17325-7245, or contact your local VE team.
The address to mail the completed 610 form is the FCC address given above.
The FCC recommends applying for renewal approximately 60-90 days
before expiration.
There is no fee required for renewal of an amateur license.

If you have it, I would appreciate receiving it. I called Kenwood
technical support 2 days ago, they told me they didn't know off the top
of their heads, and would call or FAX me the information ... haven't
heard anything back so far.

3751. Re: Lat/Lon Bearings

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-10 06:46:04 UTC
From: as041@FreeNet.Carleton.CA
Message-ID: <Cr65Gs.H5v@freenet.carleton.ca>
Source record: 265458

In a previous article, CS-ERH@nich-nsunet.NIch.EDU (Evert Halbach) says:

>Does anyone know of any software that would give me distances between
>two points when Lat and Lon of both locations are put in???
>
I use a small Macintosh application called MacShortwave which will not
only do what you ask but will also show MUF and LUF on all ham bands by
time and path.

You can program 50 location buttons by name and lat/long. Then, when you
select two city pairs (yours and another), it will tell you the distance
in miles and the best frequency for the time of day. You also need to put
in the current sunspot number.

But, this is for the Mac . . . there must be something similar for DOS if
that is your environment.

SB DX @ WW $RTDX0610
VK2SG RTTY DX Notes, 10 June
VK2SG RTTY DX Notes for week ending 10 June 1994 (BID RTDX0610)

Just a reminder, ANARTS WW RTTY/Digital Contest, sponsored by
Australian National Amateur Radio Teleprinters Society, this week June
11-12 from 0000Z Saturday until 0000Z Monday, 48 hours. 5 bands, 10,
15, 20 40 and 80 meters. All digital modes permitted. Exchange RST,
Zone and UTC time.

Our information this week came from DJ3IW and the Central-Europe DX
Cluster Node DB0SPC, I5FLN and the IK5PWJ packet cluster, N2DBI, W2JGR
and the NJ0M node of the Twin-Cities DX Packet Cluster, VK2SG and
W5KSI. Thank you all for your assistance.

Shareware RTTY/FAX Decoding Programs for the IBM PC

Frequently Asked Questions

by Dave Moisan, N1KGH

Last Revised--28 November 1993

Many people have gotten interested in receiving RTTY and FAX transmissions with their PC's. Shareware, combined with cheap, easy-to-build hardware, has put RTTY and FAX reception in reach of anyone with a good digital portable such as the Radio Shack DX440 or Sony 2010.

Two programs have become very popular: Hamcom 2.2, a RTTY terminal program, and JVFAX 6.0, a full-featured FAX/SSTV receive program. The two programs both use an identical basic interface, so one can get started in FAX and RTTY for almost nothing. Another program, PKTMON, lets you monitor HF and VHF packet off the air, using the same hardware.

This FAQ list is divided into five sections:

Introduction
Using HamComm
Using JVFAX
Using PKTMON
General Problems

Appendix--HamComm Interface Schematic and Parts List

INTRODUCTION

** Where do I get the software?

HamComm and JVFAX are available from a number of sources on the Internet, including the Simtel mirrors (such as wuarchive.wustl.edu) and nic.funet.fi (/pub/ham/misc); look for HAMCOM22.ZIP and JVFAX60.ZIP. PKTMON 1.2 is available from nic.funet.fi.

Note that HamComm 2.2--unlike earlier versions--is no longer freeware; registration is $20. It's still a bargain.

** What are the basic system requirements?

HamComm: Fast (8 MHz) XT or better, 320K free RAM, hard disk not required.

JVFAX: 286 or better, at least 1M RAM; a hard disk is
strongly recommended. Note that JVFAX has its
own extended memory driver, which might conflict
with QEMM and other memory drivers. (Version
6.0 *does* work with HIMEM.SYS, however.)

Pktmon: 286 or better.

** What are the basic receiver requirements?

I've successfully received RTTY, fax and Packet with my
Radio Shack DX400 digital portable, and have had less
luck with CW. Receivers like that will work, but table
top radios (Kenwood, Icom and Yaesu) and ham transceivers
are much more suited for this application.

** Where can I find plans for the basic interface?

The plans are included in the documentation for both Hamcom and
JVFAX. JVFAX has schematics for both the basic interface, and
a more sophisticated interface that also receives GOES/APT
satellite pictures.

A complete schematic and parts list is included at the end
of this FAQ list.

** I don't want to build it. Can I buy a interface?

Yes. William Nolle is selling his version of the interface,
called FAXCAP, and it includes all software discussed here.
Contact him at:

William Nolle
122 Phillips Rd
Hazel Green, AL 35750

(Disclaimer: I am not affliated with William, nor am I even
a customer, but merely a friend and fellow enthusiast.)

Also, Dieter Dippel is selling an interface (with surface-
mount components) which includes JVFAX and HamComm. Contact:

Dieter DIPPEL, DF4RD
Fenitzerstr. 33
D-90489 Nuernberg
Germany

Phone: (049) 911 / 55 92 96 between
18:00 and 20:00 german local time or at weekends.
(1700-1900 UTC)

Email: UNRZ45@daphne.rrze.uni-erlangen.de

** How does the interface work?

This is a zero-crossing detection circuit, made up of a 741
connected in an open-loop configuration. For every zero-
crossing (twice a cycle), an interrupt is generated.
HamComm measures the time between successive interrupts using
the PC timer chip.

** How do I connect it to my radio?

Simply run an audio cable from the interface box to the earphone/
headset output, record output, or data output of your radio. The
Sangean 803A has a record output, and the DX440 can be modified for
same. Note that the interface needs 100 mV of audio to work,
but most rigs can easily supply this.

** Can you transmit with the interface?

Depends on the software, and how you construct the interface.
Hamcomm will send through the speaker or TxD line of the serial
port; JVFAX sends through the speaker (and the TxD line starting
with version 6.0.) Pktmon doesn't transmit at all. See the
appendix for details.

USING HAMCOMM

** How do I set up HamComm?

There's a sample configuration file in the HamComm archive, HC.CFG
which explains the numerous parameters required for the program
to run. Here are the ones you should set:

select port com<n> (Select default com port, <n=1 to 4>)

Note: COM1 and COM2 are already defined. If you need to
use COM3 or COM4, here are the "define port" statements
to use:

define port com3 iobase 0x3e8 irq 4
define port com4 iobase 0x2e8 irq 3

You don't need to do this for COM1 or COM2 unless you have
an unusal setup.

If you want HamComm to keep time in UTC, include these two lines:

set timezone UTC
set timediff 7200

The timediff parameter is the time difference between UTC and
your local time (UTC minus local), in seconds. In the
example above, timediff is set to account for U.S. Eastern Standard
Time (-4 UTC).

There are many other configuration options, all explained in
HC.CFG.

** Where can I find RTTY on HF and what does it sound like?

The ham bands are the best place to find decodable RTTY. I tune into CFH, Halifax, Nova Scotia on 4271, 6496.5 and 10536 KHz. RTTY is usually sent on the half-hour. RTTY has a "deedle-deedle" sound that you're probably familiar with if you've ever randomly tuned the shortwave bands.

If you want to know what an RTTY signal sounds like, go to the RTTY screen (F3) and try control-T (transmit on/off). Type in some text and hit ENTER. You will hear a signal from the PC speaker according to the currently selected speed, shift and center frequency.

** How do I tune RTTY?

First, hit F9 for the tuning screen and, using the arrow keys, set the center frequency to 1200 Hz. For example, if you're trying to decode the ARRL bulletins on 3625 KHz, the tuning screen should look like this:

Signal Frequency: 01### Hz

0 . . . .500 . . . .1000 . . . .1500 . . . .2000 . . . .2500 Hz
Space -> | | <- Mark
|

Center Frequency: 01200 Hz

Using the arrow keys, move the lower tuning bar between the two upper tuning bars. You may need to vary your BFO, RIT or clarifier so that the upper bars are centered on the display.

The difference between the two frequencies, or "distance" between the two upper bars is the *shift* of the RTTY signal. Hit Alt-K and select the appropriate shift--in this example, 170 Hz.

You'll know when the signal's tuned properly, because a train of square waves will appear at the bottom of the screen.

Next, hit Alt-S and select the *speed*; Ham RTTY is usually 45 baud. Outside of the ham bands, 50 and 75 bauds are most common

In HamComm 2.2, you can use the Bitlength Histogram screen to measure the speed. Hit F6--the baud rate will be indicated on the upper bit display. You won't get an accurate count on very noisy signals, however.

Note: If you're mathematically adept, you can figure out the speed yourself. Hit F8 to select the Scope and freeze the display by hitting Return. Measure the time interval of the _shortest_ peak, and calculate Baud rate = 1/t*10**-3, where t is in milliseconds.

Now, hit F3 (for Baudot), and readable text should scroll forth on
the screen. If it doesn't, hit the Tab key to toggle between
Normal and Inverted keying. If text is still unreadable, hit Alt-S
and adjust the speed.

** How do I log RTTY to a file?

Hit Ctrl-F; select the directory or file you want to save to and
hit Return. To stop logging, hit Ctrl-F again.

Here's some RTTY recorded off the air on 4271 Khz (at 0230 UTC):

avalon peninsula
east coast the bonavista peninsula only.
freezing rain warning continued for the bonavista peninsula only.
tonight..overcast. intermittent drizzle or freezing drizzle.
periods of freezing rainpm yrkwivonavista peninsula ending
overnight. winds becoming strong northerly. low zero.
friday..cloudy. patchy freezing g7+)-01vtov

** Whenever HamComm is receiving a string of numbers (like
from CFH or other weather stations), it comes in garbled.

First, turn off the Auto Unshift feature by hitting Ctrl-L;
the "L" annunciator on the bottom right of the screen should turn
off.

HamComm 2.2 has a weather broadcast mode that will automatically
decode weather synop broadcasts--the string of numbers you may
have seen. Here's a sample, again from CFH:

17:45:50 UTC end/tcf
17:45:52 UTC xxxxx 142346z
17:45:55 UTC snvd17 cwhx 142300
17:45:57 UTC bbxx [SHIP]
17:45:58 UTC 44139 [ship id]
17:45:59 UTC 14231 [day:14 UTC:2300] [Wind speed obtained from
anemometer (m/s)]
17:46:00 UTC 99443 [latitude:44.3]
17:46:00 UTC 70573 [longitude:57.3] [Latitude south, longitude west]
17:46:01 UTC 46/// [automatic] [cloud height:no data] [visibility:no data]
17:46:02 UTC /2809 [cloud cover:no data] [wind dir:280 deg, speed:9]
17:46:02 UTC 10092 [air temp:+9.2]
17:46:03 UTC 40075 [pressure at sea level:1007.5hPa]
17:46:05 UTC 57014 [pressure:decreasing] [change in 3h:1.4hPa]
17:46:05 UTC 22200 [ship direction: stationary, speed: 0 knots]
17:46:05 UTC 00082 [sea-surface temp: +8.2]
17:46:06 UTC 10805 [wave period:08 seconds, height:2.25-2.75m]
17:46:07 UTC 70023 333 [section 3]
17:46:08 UTC 91211
--- log closed Sun Nov 14 1993 18:02:36 UTC ---

(In the above example, note that the latitude is reversed
between north and south; this is a known bug.)

Hit Alt-T Y to decode SYNOP reports. Alt-T I decodes SHIP
format reports. HamComm will automatically recognize incoming reports
(prefixed with "aaxx", "bbxx" or "zczc" headers), but the Alt-T
commands are useful when you want to decode in the middle of a report
without waiting for the next one.

** I found RTTY, but Hamcom can't decode it.

A sad fact of life in the shortwave bands is that at least 3/4's
of all RTTY is encrypted, and alas, much of the unencrypted
traffic is not sent in plain Baudot. There still are many
decodable signals, but you'll need good references to find them.

** How do I decode CW?

Decoding CW is similar to decoding RTTY, except that there's only
one frequency to be concerned with. While you hear the CW,
go to the decoding screen, as below:

Signal Frequency: 01200 Hz

0 . . . .500 . . . .1000 . . . .1500 . . . .2000 . . . .2500 Hz
|
|

Center Frequency: 01200 Hz

Just move the arrows so that the lower line is lined up with the
upper and hit F2.

Here's a sample of CW copied off the air, on 4281 Khz

vvv vvv vvv cqde vcs vcs vys qsx 4 6 and 8 mhz chnl 3/4/7/8 vvv
vvv vxv cq de vcs vcs vcs qsx 4 6 and 8 mhz chnl 3/4/7/8 vvv vvv
vvv cq de vcs vcs vcs qsx 4 6 and 8 mh7 chnl 3/4/7/-.--.. vvv
vvv vvv cq de vcs vc5 vcs qsx ......- 6 und 8 mhz chnl 3/4/7/8

Note that HamComm subsitutes dot-dash marks for any character it
can't decode.

** I'm hearing CW, but Hamcom just garbles it.

There are two different problems encountered with CW decoding in
HamComm. Here's what Django, DL5YEC, author of HamComm has to say:

Problem 1: Tone detection

For many people it is obvious that an RTTY signal has two states,
usually called mark/space or high/low tone. ANY data
transmission requires at least two states for 1 bit at a time and
CW is no exception. So what are the two states for CW? They
are the tone and ... NOISE ! You may be surprised to hear that
a certain amount of noise is REQUIRED to detect that the tone
has ended.

HamComm has an indicator for the tone detector output. At the bottom of the RX window, just to the right of the WPM display, is a small white dot that jumps up and down: up = tone detected, down = no tone (noise) detected. Listen to the signal and watch the jumping dot. It should follow the signal precisely and not jump around nervously or stick to one position.

The input signal is compared to the currently selected mark/space tones. To be regarded a valid tone the signal has to stay in that range for a certain amount of time. So the behaviour of the detector mainly depends on the currently selected SHIFT.

The tone detector output as displayed by the dot is the input to the character decoder.

Problem 2: Character decoding

In theory a dash is three times as long as a dot, the gaps within a character are dot-sized and the gaps between characters are dash-sized. In reality there are short and long tones and gaps of variable size because CW is usually 'hand-made.' The speed and length ratios also change during a transmission if the operator gets tired.

HamComm keeps a floating average of the tone duration to adjust to speed changes. Overall decoding quality mainly depends on the tone detector.

As an aside, I should mention that the bouncing-dot display also works great for RTTY; just tune the receiver until the dots bounce equally between top and bottom.

** Are there any reported bugs in HamComm?

As noted earlier, HamComm 2.2 has a bug in the WX decoder where the position reports are reversed from north to south in quadrants 5 and 7.

The "send text file" function transmits some text twice when in WORD mode.

USING JVFAX

** How do I set up JVFAX?

Select "Configuration" from the menu, and you should see a Config screen. Options are set using the arrow keys to select, and the space bar, - or + to set each option. Here are the options you need to set:

Demodulator: Set to "8 bits" and "Comparator". Specify the address and IRQ according to the following table:

For: Specify IRQ: and Address:
---- --- -------
COM1 4 03F8

COM2 3 02F8
COM3 4 03E8
COM4 3 02E8

Graphics and SSTV-Graph: Set this as appropriate for your system.
Most users can specify "VGA (640x480)". If you've Super VGA, see
the next paragraph, otherwise skip ahead to "Printers".

Configuring Super VGA: You'll have to choose between 16-color SVGA
and 256-color SVGA; the latter is required if you intend to view
false-color weather pix and for resolutions higher than 800x600.

Under the menu "Customising SVGA Parameters", complete the following
items. I'll use my elderly Trident card, set to 640x400x256,
as an example.

Chipset (256-color only): Select the name of the chipset in your
SVGA card (usually in your SVGA card manual).

AH/AL: Enter the register value for the video mode you want--this
can be found, again, in your SVGA card manual. In my case, I want
640x400x256 which is mode 5Ch, entered into AL.

BH/BL: Some SVGA cards, particularly VESA-standard cards, require
this register pair as well. My card doesn't use them.

Dots Per Line:
Number Of Lines: Self-explanatory. For my Trident, I enter 640 and 400
for the values.

Aspect Ratio: This is normally set to 10000 for standard (3:4 aspect
ratio) screens such as 640x480, 800x600, etc. It is calculated with
the following formula: (Lines/(Dots * .75))*10000. My Trident is
slightly nonstandard, so my aspect ratio is:

(400/(640*.75))*10000 = 8333

The JVFAX documentation lists settings for many popular cards.

Printer: Again, set this as appropriate for your system. Most
popular dot matrix printers and the HP Laserjet are supported.
(As an example, for my Panasonic 1124, I selected "Epson 24-pin".)

Enable scrolling: This determines whether faxes will scroll
off the screen when being received. Set this to "Yes".

Default Picture Directory: Enter the disk and directory where
faxes will be stored, e.g. "C:\WEFAX".

Store Pictures in GIF 89a: JVFAX uses the GIF 89a standard to store
special information on each fax, such as mode, LPM and IOC. Unless
you're using other GIF software that can't handle this standard,
leave this enabled ("Yes").

Miscellaneous Settings: Hit Esc to enter yet another configuration menu. There are just a few settings you need to make:

Quicksave: This feature lets you save the last picture sent; it works by continuously capturing faxes to a .GIF file, which may become *very* large. Unless you have lots of hard disk space, set this "off".

Initial RX Mode: Set to "1--Wefax 576"; this is the mode that almost all weather faxes are sent in.

Disable XMS use: Set to "No". Normally, if HIMEM.SYS is loaded by DOS, JVFAX will use it to manage memory. With some DOS/BIOS/hardware combinations, this may cause problems (blank pictures, lock-ups, etc.) so you may need to disable XMS (set parameter "Yes"). This will degrade JVFAX's performance so leave this alone unless you are actually having problems.

Hit Ctrl-Enter to leave this menu. Hit Ctrl-Enter again, and you're done!

** Where do I find fax and what does it sound like?

A Fax signal will have a "scratchy wheel" sound when sending a picture, and a carrier tone when idle. It can be found easily in the maritime bands. Unlike RTTY, there are few variations, and no transmissions are encrypted that I know of.

Two stations I hear regularly on the US East Coast are NAM, Norfolk, VA on 3356, 8080 (irregular) and 10865 KHz, and CFH, Halifax, NS on 4271, 6496.5 and 10536. CFH sends faxes on the hour, generally. I've found press fax on 9242, from Buenos Aires, Argentina.

** What modes are faxes usually sent in?

Weather faxes are usually sent with an IOC (Index of Correlation--the ratio of width to height) of 576, and an LPM (Lines Per Minute) of 120. Press faxes, the few I have found, use an IOC of 288 and an LPM of 60.

** OK, I'm hearing it. How do I tune in?

Using NAM, 10865 KHz as an example, follow these steps:

1) From the JVFAX main menu, hit F (Fax), and you'll be shown a blank screen with a tuning indicator and a menu box on the bottom of the screen.

2) Select the mode by hitting 1 ("Wefax 576").

3) Set the deviation to 400 by hitting the D key till it comes up.

4) Using your BFO, RIT or clarifier, tune the signal (in lower sideband) until you see a peak on the tuning indicator. Tune this peak towards the W (white) end of the scale (This will normally be 1.9 Khz below the center frequency, in this case 10863.1 Khz.) The indicator should look like this:

```
! <- Signal
! peak
! should
. . . .. .. .. . . ##! be here
----------------------------------------
B W
```

5) Hit A (APT); it should read "Running" and you should start to see a fax appear on the screen! To stop recieving, hit A again.

NOTE: If you have selectable filters on your receiver, set them to "wide" or "FAX" and set the RF gain as high as possible without overloading.

** I don't get a fax, or I get something garbled.

Check the mode; most fax transmissions use "Wefax 576", mode 1 in the program. The LPM should be 120. Check your connections to the interface. If that's in order, you may have an RFI or interrupt problem (see questions in "General Problems").

** I get a fax, but it comes out slanted.

Hit / and a line will appear; use the arrow keys to tilt and move the line so that it's lined up with a line on the fax (such as a border or a chart line). Hit Return, and the fax should now come in straight. Note that this is a permanent adjustment, and you shouldn't need to fix this ever again, no matter what faxes you subsequently receive.

** I get a fax, but it's not aligned with the edge of the screen.

Hit R (Rotate) and move a line with the arrow keys to the left edge of the fax (there'll be a black bar where the fax is supposed to start.) Hit Return and the fax should now be properly aligned.

** My fax is negative!

You're receiving the fax on the wrong sideband; try the other sideband. Most faxes are sent in LSB. A few press stations transmit negative pictures (JVFAX can be set to fix this; see the docs.)

** My fax is too dark.

** My fax is too light.

Your receiver is mistuned. If the fax is too dark, tune towards the white end of the tuning scale (peak moves towards W). If the fax is too light (washed out), tune towards the black end of the tuning scale (peak moves towards B).

Also, make sure the deviation is set correctly--at 400 for most faxes. This is especially important for receiving the GOES satellite images that NAM and other stations send.

** I started receiving a fax, but JVFAX stopped it (APT "waiting").

When reception is noisy or weak, JVFAX often interprets a noise burst to mean "end of picture". Hit A again to restart receiving. If this happens more than once, you probably won't get a very good fax anyway.

** How do I save a fax to disk?

While you're not receiving a fax (APT "waiting"), the S key will toggle the save-file option on and off. Faxes will be saved in .GIF format to the disk and subdirectory you specified in the configuration screen.

** I enabled Save to File, but when I hit A to start a fax, the Save feature turned off.

Go to the configuration screen (C from main menu) and check the save file specification. JVFAX won't save to a file if there's a typo (like "C:\\JVFAX") but it won't notify you of the error either.

** How do I print a fax?

Two ways:

1) While you're in the fax receive mode and not receiving a fax (APT "waiting"), P will enable your printer; it's a toggle, so hit P again to disable printing.

NOTE: You cannot have both Save to File and Print options enabled at once. Also, once the fax is printing, the Rotate command will not work on the printout.

2) Hit H (Show and Send Pictures). Select the fax you want to print. When it appears on the screen, hit P. JVFAX will ask how much width it will print in (0-100%); hit Return for the default (100%).

** The GIFs I save are too big! How do I shrink them?

It's not uncommon for weather faxes to be very large, especially if you regularly pick up 16-shade GOES images over NAM (a recent GOES fax from them "weighed in" at 870k!)

There are several methods you can use to shrink the size of your GIFs:

1) You can crop them. From the main menu select H (Show and Send Pictures); from the directory listing, select the file you want to crop. The fax will show up on the screen--select the Z (Zoom) option. Use the arrow keys to move the zoom box (which is about the size of a regular 640x480 VGA screen), and the X, Y, + and - keys to resize it. Hit Return and the cropped image will fill the screen. Hit S to save it (under a different name.)

2) You can reduce the resolution on faxes to be received. Most faxes (of the Wefax 576 variety) have a resolution of 1810x 1000, which makes for beautiful printouts, but is overkill if you're just using a GIF viewer.

To fix this, go into the Mode Editor (M from the main menu) and select the mode you normally use (e.g. Wefax 576). Step through the options with the arrow keys and select Resolution. For Wefax 576, it'll normally be 1810. Enter a smaller value (800 is OK) and hit Return.

If you're only interested in charts and not satellite images, select the Grays option and set the number of shades to 2 (B&W only--no gray scale). Your GIFs should be much smaller, though at a significant loss of resolution. (That being said, I once saved some GOES images from NAM for a friend of mine in 800x600x4 and they still looked good.)

** I get an all-white/all-black signal, no matter what signal is coming in on the receiver.

** I get horizontal white/black bands on my pictures.

** I get a white peak on the tuning indicator that doesn't move.

Either your audio cable to the interface is broken, or you have an interrupt conflict between serial ports. If it's the latter you may need to move the interface to another port.
(See "General Problems" for more on troubleshooting this.)

USING PKTMON

Unlike HamComm and JVFAX, Pktmon has few options and is simpler in scope. Using the same interface, Pktmon will decode HF and VHF packet. Pktmon can log to a file, and will optionally keep track of packets, assembling them into separate files for you. Note that the program is receive-only.

While it will never approach, let alone replace, Baycom or a TNC, I've been delighted with its very ingenious attempt at implementing AX.25 in software, and have found it a surprisingly fair performer. It even comes with source code (Turbo Pascal) for implementing your own projects with the interface!

There isn't much to running Pktmon, so here's a quick rundown through the prompts.

"COM 1 or 2?" Self-explanatory.
Pktmon doesn't support COM3 or COM4.

"Packet type?" Enter 1 for HF packet or 2 or 3 for VHF packet.
I've never noticed a difference between the latter
two options in use.

"Log bad packets?" If you answer Y, packets with CRC errors will
printed, otherwise, not. I usually choose to
log them.

"File to log all packets"

Self-explanatory. If you don't specify a file,
packets will go on the screen.

"File to log sorted packets"

Enter a filename, _no extension_. Pktmon will
sort packets to the files <n:filename.#>, #=
0 to 9. It also creates a file <n:filename.OTH>
for uncategorized packets such as beacons.

That's it. Pktmon will start decoding packets until you hit Return.
There's a tuning indicator on the top of the screen that indicates
activity. Here are some sample unsorted packets copied off the air
on 14099 Khz around 2300:

****** connection inactive for 5 minutes

Now, the questions:

** Where do I find packet and what does it sound like?

On HF, packet can be found mainly at the lower end of 20 meters
(14090-14150 usually) and in the 30 meter band (10100-10150 Khz).
VHF packet can be found on 145.01, 145.03, 145.05, 145.07 and
145.09, among other places. It has a "braaaap..." sound quite
unlike RTTY.

** How do you tune in packets on HF?

On the upper edge of the screen, there's an "A" scale. While
hearing packets, tune VERY carefully until the scale reads 6 or
higher. Pktmon expects a tone frequency of about 1000 Hz.

** I'm logging sorted packets, but they're missing linefeeds.

You'll have to go into your favorite ASCII word processor and
have it insert linefeeds. I usually copy all the <n:filename.#>
files into a single file and fix it there.

** I'm getting lots of CRC errors.

On HF, this is, sadly, normal. Packet is just not well suited
to a ever-changing ionosphere, and it's marvelous that it works
at all. (When I copied the sample text, the ionosphere was
very quiet, an unusual occurence as I'm writing this.)

On VHF, on the other hand, CRC errors may be a result of Pktmon
being unable to keep up with transmission. 1200 baud is near
the limit for this type of interface. I've also found that with
my setup (in an apartment), I seem to be prone to multipath
and other VHF anomalies that disrupt reception, especially
of packet.

** The program locks up on me when receiving lots of packets!

If there's too much activity on the air, or the receiving tone
frequency is too high, Pktmon tends to lock up, as it can't
"follow" the signals fast enough. This has been reported by
several users on Fidonet.

According to the author, Pawel Jalocha, if Pktmon takes a long
time to terminate upon hitting Return, your machine may be

too slow.

GENERAL HARDWARE PROBLEMS

** Can I use EMM386/QEMM or other memory managers with HC, JVFAX or PKTMON?

Generally, no. HamComm, JVFAX and PKTMON are interrupt-intensive and use up most of the CPU cycles. That's the price you pay for having the demodulation and decoding done in software (rather than in a TNC). JVFAX comes with its own memory manager, anyway.

Note: While JVFAX 6.0 and HIMEM.SYS seem to work fine, if you have interrupt problems (blank pictures, streaks), try removing "DEVICE=HIMEM.SYS" and "DOS=HIGH" statements from your CONFIG.SYS before using JVFAX. I've not seen any problems with HIMEM and HamComm or Pktmon.

If you regularly use EMM drivers, Windows or Desqview, make up a minimal boot disk disabling all such programs, before running HamComm, JVFAX or PKTMON.

** I can't seem to receive freqs. higher than 100 Hz on the HamComm tuning screen.

The interface may not be receiving enough power from the serial port to operate. Modifications for a battery-powered interface are in the appendix.

** I get noise from my computer--HELP!

One of the most difficult problems in linking PC's with radios is RFI. It's beyond the scope of this FAQ list to cover every possible contingency, but here are some suggestions:

1) Keep your computer and your antenna *well* separated from each other and use good, well-shielded, coax for the lead-in.

2) The HamComm interface should be *shielded*--use a metal or foil-lined box. Use good shielded cable for both the audio and data connections.

3) Use RFI toroids (available at Radio Shack) on all cables.

4) Install 0.1 uF capacitors from the DTR and RTS lines to ground.

5) Install an audio isolation transformer between HamComm and the radio. (Radio Shack #273-1374).

6) Make sure the monitor, printer and their connecting cables are well shielded. Monitor noise is very common, as is printer noise.

In my case, I had to do all of those steps. My 286 PC was feeding RFI back through the earphone jack of my radio), *desensing* it (ouch!) I never got all the RFI out, but I reduced it considerably so that I only get a slight increase in background noise on a few frequencies.

APPENDIX -- THE HAMCOMM INTERFACE SCHEMATIC

Here's a schematic of the HamComm interface, reproduced with permission:

Disconnect D1, D2, D3, D4, C2 and C3.

NOTE: HamComm sends RTTY through the COM port's TxD line, as well as the speaker. See the HamComm docs for more details.

If you're just interested in receive, omit the PTT and transmit audio circuitry.

None of the parts are critical, so raid your junkbox! Prices for equivalent Radio Shack parts are given for reference--which you can beat by judicious shopping/scrounging.

Parts List -- Main Circuit

Part Value Radio Shack # Price (1994 catalog)

C1 0.1 uF 272-135 $0.69 (for 2)
C2, C3 1 uF 16 V 272-1434 $0.59 each
D1-D4 Diode, 1N914 276-1122 $1.19 (for 10)
*D5 Diode, 1N914 276-1122
IC1 Op amp, 741 276-007 $0.79
R1, R2 100K 271-045 $0.39 (for 2)
*R3 1K 271-023 $0.39 (for 2)
*Q1 Trans. 2N2222 276-2009 $0.59

* Not needed for receive-only interface

Parts List -- Transmit Audio Filter

Part Value Radio Shack #

C1 .1 uF 272-135 $0.69 (for 2)
C2 .022uF 272-1066 $0.69 (for 2)
C3 .022uF 272-1066
R1 10 K var. 271-282 $0.49
R2, R3 15 K 271-036 $0.39 (for 2)

Miscellaneous:

Enclosure (RS #270-239 recommended, $2.19), PC board (RS #276-170, $2.79), audio jack (RS #274-316, $2.19 for 4), RFI toroids (RS #273-104 $7.95 for 2), DB-9 connector (RS #276-1536, $1.29), audio cable, plug to match radio.

If you buy all Radio Shack parts for the converter, it should cost $15 for the full circuit (plus transmit portion), not including the RFI toroids. Again, the circuit is not really critical--if you have any parts lying around that fit, use them!

SOME RTTY AND FAX FREQUENCIES

Here's a short list of RTTY and FAX frequencies heard around the world. It's nowhere near complete, but it'll get you started. These are mostly meteorological stations, with some press stations thrown in.

All FAX stations have a LPM and IOC of 120 and 576 unless otherwise noted. All frequencies are in KHz:

Station Frequencies Comments
------- ----------- --------

CFH, Halifax, NS Canada 4297, 6496.5, 10536, RTTY 75 baud/850 Hz

USA 18102.5, 21095, 28095

There's now a database program of weather fax stations, WXFAX,
that contains information on 101 stations on 312 frequencies,
which may be sorted and printed in any order; it also includes
sample faxes. A demo copy can be found on nic.funet.fi, directory
pub/dx/software/msdos/misc, file WXFAX.LZH.

CLOSING COMMENTS

This FAQ list was the inspiration of myself and many others on the
Fidonet SHORTWAVE echo, who have been using and experimenting with
HamComm and JVFAX for over six months, trading ideas and hints along
the way. When more people asked me for help, there and on the
Internet, I thought of the obvious and wrote this! <g>

The following get credit for lending me a hand:

W.F. Schroeder (DL5YEC), Pawel Jalocha (SP9VRC), Reid Kelly,
John Palaima (N1NIG), William Nolle, Tom Carney (WB9RJX),
Ken McKenzie, Derek Buchler, Stephen Lee, Marius Rensen and many
others not cited here.

>I'd be interested in hearing the group's feelings about new FCC
>licensing fees for VHF maritime transceivers. In my view this is
>an outrage.

I totally agree. A marine radio is a piece of safety equipment, not a luxury
item. This will either cause bootleg operations, or fewer boats to have
radios.

3756. Re: JPOLE.EXE calculates measurements of antenna for desired freq v1.1

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-10 12:46:04 UTC
From: edh@hpuerca.atl.hp.com
Message-ID: <edh.771251638@hpuerca>
Source record: 265468
Cross-posted to: rec.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur.antenna,fj.rec.radio,rec.radio.shortwave

The following uses a calculator to give you the 1/4 wave section
of a 1/4 GP antenna or "short" section of a J-pole. I use a
velocity of propagation factor of .91 and center frequency of
146 megahertz; for those with programmable calculators, assign
variables here :-)

(((((300 x .91) -:- 146) -:- 4) -:- 2.45) x 100)

Results in inches (19.08... in this example) for the 1/4 section.

For real fun use the expression with variables in a #DEFINE in
a c program and then pull the result out of the middle of some
string i/o functions later :-)

Cheers & 73

: >: >hams within simplex range of my QTH. Perhaps you simply don't understand
: >: >the issues here in Southern California.
: >
: >: What issues? Seems as if you have plenty of people to talk to on simplex.
: >: Why bother to use a repeater?
: >
: >: Jeff NH6IL
: >
: >Jeff, how about giving all of us a break, and if you don't have serious
: >comments about the topic of the thread, then simply QRT.

: Seems you should take a bit of your own medicine, OM, since your remark
: has nothing to do with the thread. It has become glaringly obvious that
: you desire to be moderator of this topic, and that when someone disagrees
: with your stance you retort with ``your remarks are not resolving this
: issue <blah blah>...''

: Reread what you said above: ``...50,000 hams within simplex range...''.
: Do you realize how ridiculous you sound whining for access on repeaters
: that don't want you just so you can yake at a few hundred more folks?

: This entire thread is ridiculous - when you use a repeater you're using
: twice the spectrum that's actually needed to carry out your communication;
: you cry about spectrum management yet tie up *two* frequencies every time
: you key your xmtr, when in actuality you could very well use a single
: frequency to talk to that same person. You're relying on other peoples'
: radios (repeaters) to radiate more-than-needed RF thus limiting other
: people's use of that same frequency.

: Is that person too far away to communicate via simplex? Then try a band
: that suits the range: groundwave on 160M or 80M comes to mind.

: Jeff NH6IL

It's interesting, Jeff, how your replys to others on this thread are
almost invariably hostile, containing nasty little phrases like
"you are whining about....." etc. etc.

In answer to your not-very-civil question about why we don't all use simplex, I do, in fact, have an answer: we often do. However, the geography in the area contains many hills and tall buildings which often inhibit reliable simplex operations. This is particularly true if one of the stations is mobile.

That's why repeaters were invented in the first place, Jeff.

73, and let's see if your next answer can be a tad bit more polite and civil, omitting charged words and phrases like "whining" and "...want a free ride at other's expense..." etc. etc.

: Vassili, N2WID.

As you probably noted elsewhere on this thread, the ARRL has done quite a
bit to bring about faster licensing. The comparison between the DMV and
the FCC is not a valid one, in my opinion. The DMV licenses people to do
something that many of us **must** do in order to make a living: drive a
car. Ham radio is just a hobby, and FCC has made it clear that we are
far from its highest priority.

3761. TK Corse Island dxpedition

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-10 14:10:55 UTC
From: barp@hp4.sm.dsi.unimi.it
Message-ID: <2t9s9f$ihd@hp4.sm.dsi.unimi.it>
Source record: 265474

Hello you all,
the division of Milano of tha A.R.I. (Italian Radioamateur Association)
will be active from Corse Island in the period:

15 giune 1994 'till 20 giune 1994.

We will work on 10, 12, 15, 17, 20, 30, 40, 80 meters

in SSB CW RTTY

WE will be active also on vhf ssb.

We will use KENWOOD 850's and 100w

ANtennas: 3 el. yagi for 10, 15 and 20 meters

Cushcraft R7 wor 40 --> 10 meters

Dipoles for 80 meters.

Is probably also satellite activity on RS12-13 with 29 Mhz downlink.

the call will be TK/IK2QIN/p

QSL VIA IK2QIN CALLBOOK ADDRESS OR VIA BUREAU IS OK

We're waiting for you all on the air.

Best 73's and good dxing.

IK2QCC Andy .

Wrong, the SBC does NOT handle radio licensing. TAS, Telecoms
Authorities of Singapore does and their contact number is 5383388 or try
5306638 and ask for Wendy.

Nope, they don't meet there no more. They now meet at the Medical
Alumni Association on the last Thursday of every month. One of the conference
rooms. Meetings are okay, pretty interesting sometimes. :)

George,

Try electra.cs.buffalo.edu for US/Can. database. The search engine
is very good inasmuch as you can search for call, name, city, state,
zip, etc.

>coordinating committee to allow more than one repeater per channel, despite
>the FCC requirement for channel sharing and non-exclusive use of any given
>frequency.

When I jumped into it, early on, the issue was the band being full of closed repeaters. There were two solutions proposed: Roger's communist idea of forcing all repeaters to be open, and your idea of forcing repeater trustees to share channels. Neither one is politically feasible.

>Open repeaters weren't the issue, access to spectrum was and
>continues to be the problem.

To Roger, open repeaters ARE the issue: if the 440 band wasn't full of closed repeaters, he and his buddies could get a free ride on someone else's work by hanging out on an open repeater.

This is nearly right. If you have already said you are "destinated" then say "73s", it is an automatic six of the best, with no appeal.

For saying "QSL" when you mean "yes" or "roger", gets you four strokes for your first offence, even if you are an american with an alleged "Attention Deficit Disorder".

3767. VHF Maritime Outrage!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-10 15:56:46 UTC
From: revco@YALE.EDU
Message-ID: <1994Jun10.155646.6575@news.yale.edu>
Source record: 265278

I'd be interested in hearing the group's feelings about new FCC licensing fees for VHF maritime transceivers. In my view this is an outrage. The availablility of VHF Maritime transceivers should be facilitated, in my view, NOT impeded, for safety reasons. It is quite possible, if not probable, that a mariner with a VHF transceiver might be within closer range of a sailor in distress, than the US Coast Guard, or other parties. I can recall being stranded in a 22 ft sailboat, in a thunderstorm, with no wind, and only a VHF HT on board. To charge a licensure fee (>$100) which might represent anywhere from 30 to 75% of the value of a transciever is absurd.

My other concern, of course, is that we will see reinstituted, licensure fees for amateur licenses. fyi:

>From the BOAT/U.S. Newswire, 6/10/94: FCC ADOPTS HIGHER MARINE RADIO LICENSE FEES
Contact: David Pilvelait, boatus@aol.com
WASHINGTON, DC - A spokesperson for the Federal Communications Commission (FCC) told BOAT/U.S. today that the Commission has voted to increase the cost of licensing a VHF marine radio from $35 to $105. The formal announcement of the increase will appear in the Federal Register next Monday or Tuesday and the increase will become effective 30 days from that day, which would be on or about July 13.

The spokesperson also said the fees - $35 for the license application and $7 per year, or $70, for the 10-year term of the "ship's station" license - would be in effect for 1994 and that the FCC "would entertain comments for changes in the fee structure" for 1995 and future years in a Notice of Proposed Rulemaking for the '95 fees, to be issued in a couple of months.

Ick! :-)

As has already been stated, style guides are better sources of authoritative information. Even though English is a living language and the Third International is the latest version, many knowledgeable indviduals feel that the Third is inferior to the Second. My 1950 New Collegiate, based on the Second International, had the good sense to say regarding punctuation, on page 1193, "An apostrophe followed by an s is used to form the plurals of figures . . . but forms omitting the apostrophe are gaining ground." It refers the reader to section 12 of Orthography (page 1186), which states, "Plurals of . . . figures . . . are formed by adding -s. An apostrophe which according to the older convention regularly preceded the -s is omitted by more and more writers and printers where no ambiguity is likely."

Hi Jerry, there was no argument that 73s was not the plural of 73. The argument was that 73's was not the plural of 73. Will made fun of 73's as a plural and I responded. I agree that 73s, 73-s, and 73's are all acceptable ways to pluralize 73. The point is that, although maybe not the preferred way, 73's is a perfectly acceptable way to pluralize 73. It may be senseless to pluralize "Best Regards" but there are certainly a lot of 73's in this posting.

Sounds like the US is bringing their fees into alignment with the Canadian
fees.

FYI: fees for Canadian amateurs: (sorry, don't have the maritime fees handy)
qualification exams (per exam): $ 5.00
annual station license
(per callsign): $24.00 (I think that's what it is)

therefore for a 10 year license we pay $240 + the cost of any exam/upgrades
during that period.

On the other hand, once you have a qualification you have it for life,
and we do have vanity callsigns (now if only the ones we wanted were
not already taken).

We have been dealing with the problems of a top mounted repeater
antenna. We have tried PD SSM, Comet antennas on top with no luck and we are
considering two side mounted PD SSM antennas. The reason for two is to try
to get around the effects of the tower.
Questions:
Anyone have experience doing this?
What method did you use stacked, oppsite sides?
How would you construct the phasing lines?

Thanks for your help
Jeff

>pun intended). I recall hearing about problems with important
>characteristics like selectivity. Is there any truth to this
>(specifically with respect to the R100)?

I think this scanner is not that popular because of its price/features ratio. The specs on this unit are great, but HF coverage without SSB is of limited interest to many. So we are really left with a VHF/UHF scanner. But the R100 isn't much of a scanner, its more of a comm receiver. Programming is typical Icom - lots of button pushing for simple operations. If I remember correctly there are no "banks" of channels, which is standard now for scanners. If you want a small comm receiver, that can scan in a pinch, then this unit is great. But most people opt to spend more and get the "He-Man" R7100. I have been tempted to get one several times, but I just don't know what I would use it for. Listening to satellites while mobile?

: a VHF HT on board.

Strange thunderstorm. Generally the problem is the abundance of wind.
But accepting in your part of the country you have thunderstorms without
wind, and you only had a VHF HT, how did this solve the problem with no
wind?

: To charge a licensure fee (>$100) which might
: represent anywhere from 30 to 75% of the value of a transciever is

Clearly, then, the solution is to raise the price of the transciever.
Would you care to buy a transciever ... I have one for sale.

: My other concern, of course, is that we will see reinstituted,
: licensure fees for amateur licenses. fyi:

They did cost money at one time. Virtually every other country in the
world charges money for a license except the U.S. What it costs a
Japanese ham in terms of money and bureaucracy would make your hair
stand on end. If the U.S. license costs $70 to $140 for a 10 year period,
this is peanuts compared to what a station costs. You can easily spend
that much a year in postage and IRC's chasing a DXCC. Maybe its time
we accept what the costs of our hobby is and be happy to enjoy it.

3776. 10-10 group?

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-10 20:43:33 UTC
From: wb9omc@constellation.ecn.purdue.edu
Message-ID: <wb9omc.771281013@constellation.ecn.purdue.edu>
Source record: 265288

Some time back I posted looking for internet hams who might also be members of 10-10 International. This was for the purpose of gauging how much interest there might be in forming an offshoot newsgroup of rec.radio.amateur.tenten or something like that.

Much to my surprise, I got some email from interested persons. I wouldn't say that I was flooded with it, but if you consider that around 66,000 membership numbers in 10-10 have been issued out of maybe half a million US hams (plus some number of DX stations who are members) and that only a limited subset of licensed hams have access to the internet anyway, well.....I didn't expect to be drowning in replies. :-)

Suffice to say that the interest has been enough to push me into coming back to get more "official" about it.

As a general statement of purpose, the group would be to assist members of 10-10 in setting up skeds and so forth and dealing with the current downturn in 10 meters. Plus it would give a somewhat less cluttered forum for such interested parties to share information and other material relating to 10-10 activities.

While I realize that to some it would appear more like a group dedicated to an organization, I should say that the entire goal of 10-10 International in the first place was to foster interest and use of the 10 meter band. The concept of "use it or lose it" comes into play, and now that the FCC is stuck being deluged with commercial interests such a group might be beneficial for the purpose of keeping UP useage of ten meters.

NOW - having said all that shtick, I realize that there are some fairly well-defined steps including but not limited to the RFD's and CFV's and all that stuff. :-)

My problem - I don't really know diddle about the sysadm end of things and quite frankly stuff like news.groups drives me up a wall.

SOOOOOOO - what I need to find (ideally) would be a ham-internet person who DOES have a pretty decent working knowledge of all that good stuff to help me get the ball rolling. Whether it ever comes down to a vote and whether or not such a vote would go yea or nay will require a bit more expertise on these internet issues than I currently have.

OK - got anybody out there who fits this description and wants to help?

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
June 10 to June 19, 1994

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008
SKYCOM Announcement: (403) 756-2386

VHF RADIO PROPAGATION FORECASTS DISCONTINUED
~~~~~~

The VHF radio propagation forecast has been discontinued due to the weak state of the ionosphere and the declining phase of the sunspot cycle. Lower-VHF propagation (between 30 and 45 MHz) will remain possible primarily over isolated equatorial regions near local noon throughout the remainder of this declining sunspot cycle. Sporadic periods of enhanced VHF propagation above 50 MHz will be possible during periods of sporadic-E. Middle latitudes will not see easily predictable periods of VHF propagation except during periods of enhanced sporadic-E and perhaps during strong geomagnetic storms. Possible storm-related openings will be noted in the weekly forecasts, but the regular VHF propagation report will not appear there. We will supplement the loss of this information with other interesting data, whenever possible.

If you have any comments regarding the utility of the VHF radio propagation forecasts which have been provided in the weekly forecasts, please write to us at: Solar Terrestrial Dispatch, P.O. Box 357, Stirling, Alberta, T0K 2E0, Canada. We appreciate your comments.

This VHF radio propagation forecast will return during the rising phase of solar cycle 23.

This graph is determined by plotting the greater of either the planetary
A-index or the Boulder A-index. Graph lines are labelled according
to the severity of the activity which occurred on each day. The left-
hand column represents the associated A-Index for that day.
Q = Quiet, U = Unsettled, A = Active, M = Minor Storm,
J = Major Storm, and S = Severe Storm.

GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX

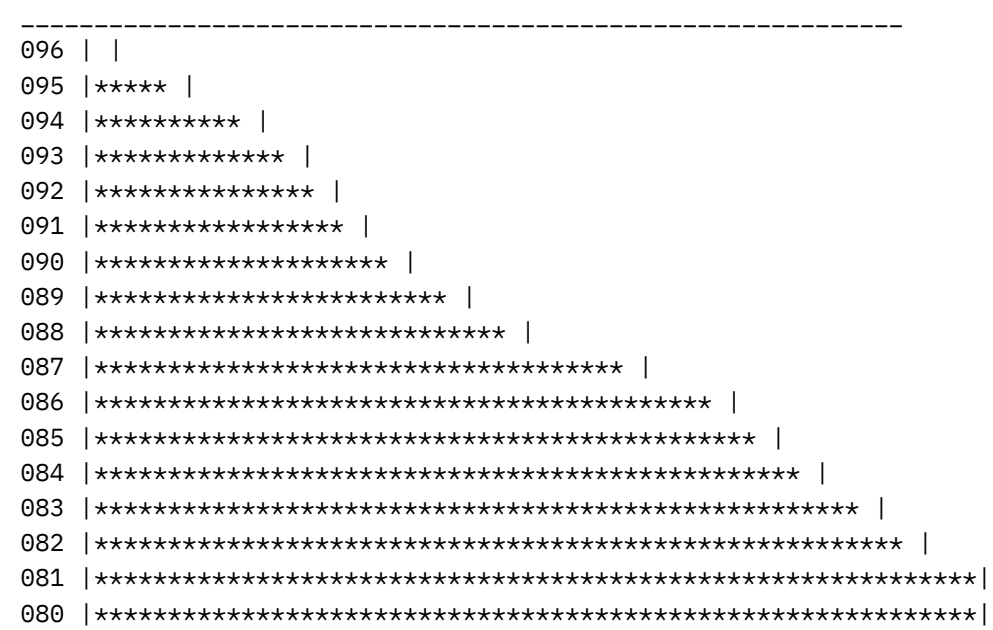

Chart Start: Day #101

NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

3779. France & Switzerland

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-10 22:22:23 UTC
From: Jim Jaskie <jim_jaskie@tempeqm.sps.mot.com>
Message-ID: <1994Jun10.222223.20548@newsgate.sps.mot.com>
Source record: 265290

Help! I am going to France and Switzerland on business soon. If I take my 2-meter HT in my luggage with my American license and NO reciprocal license (there is no time!) what will happen?

Does customs really care, since this radio is used in France and Switzerland on the same band. Can it be contraband? Will I be sent to Haiti or merely caned?

Has any intrepid Ham done this, served his time in "Le Legion Etangere" and returned able and willing to share information with me?

Before anyone asks, yes I called the French consulate in Washington and asked. The Attache for Customs told me "I don't know what will happen, try it and we'll both find out." He would not rule out that it might be confiscated. He also would not rule out that it might be ignored. C'est la vie!

Thank you for any light that you can shed on this dark corner of the civilized world!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z JUNE 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 10 JUNE AND FORECAST UP TO 13 JUNE

IPS Warning 16 was issued on 08 June and is current
for interval June 11-13 (coronal hole).

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 085/027

1B. SOLAR FORECAST
11 June 12 June 13 June
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 9 June
Learmonth 13 2234 3323
Fredericksburg 15 13
Planetary 15 10

Observed Kp for 9 June: 2344 2122

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
11 Jun 20 Active.
12 Jun 25 Active.
13 Jun 20 Unsettled to active.

2C. MAGNETIC COMMENT
Geomagnetic activity is expected to increase to active levels during
the interval June 11-13. This increase in activity is expected due to
a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Jun normal normal poor-normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
11 Jun normal fair poor
12 Jun fair poor poor
13 Jun normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Degraded global HF propagation conditions are expected in association
with geomagnetic activity forecast for 11-13 June. (Coronal hole).

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 10 June: 36

Predicted Monthly T Index for June is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
11 Jun 30 Near predicted monthly values.
12 Jun 20 Near predicted monthly values.
13 Jun 20 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Degraded HF comms expected during interval June 11-13.

3782. Icom R100

Newsgroup: rec.radio.amateur.misc
Date: 1994-06-10 23:25:16 UTC
From: adam@panix.com
Message-ID: <2tasos$36i@panix.com>
Source record: 265289
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.scanner

Earlier this week I posted the following to rec.radio.scanner and rec.radio.amateur.equipment:

I have a friend who is interested in the Icom R100. If you have experience with this radio, he'd appreciate hearing your comments (both pro and con) as well as alternative suggestions. Pointers to anyplace where discussions about the R100 might be archived would also be useful. I'll forward replies.

Well, either nobody feels very strongly about this radio, or all of you R100 owners (or former owners) assumed that somebody else would answer. The only substantive reply I got was from Richard Crisp. (Thank you Richard).

So this is a second attempt. I'll also add that I seem to remember that there was a series of several Icom wideband receivers (possibly including the R1 and the R100) which were not too well received (no pun intended). I recall hearing about problems with important characteristics like selectivity. Is there any truth to this (specifically with respect to the R100)?

: my wallet is going to take if I want my call letters on my license
: plates. Can somebody give me an idea?

It's not bad at all ($10 one-time, then normal fees after that - be ready for 'sticker shock' on those, the state collects a HUGE excise tax).

The fun starts when you try to transfer plates - both a friend and I had the experience of having to explain (several times) to the agency doing the transfer that the plates were NOT vanity plates ($35/year).

Also, at least with my truck (which has a truck license), I get strange looks from meter maids when I park in 'Truck Load' only zones.

Finally, this last year, I went to have my truck emission tested (we have that, too), and they couldn't make my license come up on their computer system - it was hilarious, we had the whole testing station gathered around one terminal, looking for my records. The poor tester kept looking at the plate, and asking me 'Are you sure you need an emissions test? Are you sure those are Washington plates". They finally put 'NQNM' on the form, and then hand corrected it - I have no idea what the hassle was really all about.

Welcome to Washington....

Hi,

Can you tell me where to mail-order some 2-way 900MHz or 800 MHz, trunk or conventional, mobile or portable radio at a discount price?

My local dealer can sell me some at $500 - $600, which is a little bit too expensive for me.

Thanks a lot.

This is only the latest attempt by the Administration to raise money for the
federal coffers. The fees for other licenses have also risen. The fee
for the commercial radio licences has risen from $35 to $105 also. Can
charging for amateur radio licenses be far behind? I don't think so. I
predict that with 5 years all amateur will be paying something to
apply for/renew their license.

Get a copy of FCC Form 610 from the FCC, the ARRL, or your local ham club, fill it out, attach a copy of your current license, and send it in. You should send it in at least 90 days prior to the expiration date.

This is probably an unpopular sentiment, but here goes:
AFAIK the US is the ONLY nation that charges $0.00 for a life-time amateur license.

If kicking in a pittance every year (and, face it, genetlpersons, $7 per annum is NOT a huge sum of money .. less than 2 cents per day; heck, I lose that much behind the sofa) will warm the cockles/coffers of our government, and maybe make them just a TEENY bit more responsive to us, then it's a good thing.

Remember: The amateur service is a big sink to the FCC ... we provide nothing of significant value any more, and we're sitting on hundreds of megahertz of valuable bandwidth.

How many licensed hams are there in the US now? 200,000 maybe? At $7 per ham per year, we're paying merely $1,400,000 p.a. rent on a LOT of real estate...

I'm vaguely upset that for administrative reasons they chose to charge the ten years in advance. I can imagine a young ham having some difficulty scraping up that money, but if you are like me, or most of my ham buddies, kicking in the $70 for a new ham's license would make a great "welcome to ham radio" gift. Go without a new doodad for a few more weeks.

A friend of mine and I scrounge the swap-fests and pick up all of the IC-2ATs and 4ATs that we can find. When a young person we know gets a license, but can't afford a radio, [s]he's given one on 'permanent loan'. I suppose we've spent about $700 each doing this, but I consider it just a part of my obligation to keeping ham-radio alive.

Scott

P.S. This really kinda goes against my nature -- I'm usually a rabid libertarian.

Greater than 2 MeV Electron Fluence for 10 JUN is: 4.2E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Current disk regions were
mostly stable or in slow decline.

Solar activity forecast: solar activity should be very
low to low for the next three days. Region 7730 (S11E37)
could produce an isolated C-class flare.

The geomagnetic field was quite variable during the
period. From 10/2100-11/0900Z, the field was quiet to
unsettled. From 0900-1200Z, mid latitudes experienced active to
minor storm conditions and some high latitude sites reached
severe storm levels. The remainder of the period was at
unsettled to active levels. Greater than 2 MeV fluxes were at
mostly moderate to high levels.

Geophysical activity forecast: the geomagnetic field
should be disturbed for the next three days due to a coronal
hole related high speed solar wind stream. Mostly active to
minor storm conditions are expected during local nighttimes.
Unsettled to active levels should be experienced during
daylight hours. Some high latitudes sites may experience
intervals of severe storming.

Event probabilities 11 jun-13 jun

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 11 jun-13 jun

A. Middle Latitudes
Active 35/35/35
Minor Storm 20/20/20
Major-Severe Storm 10/10/10

B. High Latitudes
Active 40/40/40
Minor Storm 25/25/25
Major-Severe Storm 15/15/15

HF propagation conditions were near-normal to slightly
below-normal. High and polar latitude paths saw minor episodes
of signal degradation during the local night hours. Similar
conditions are expected over the next 72 hours. Signal fading
and occassional absorption may increase on 11 June before
conditions start improving again on 12 and 13 June.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

From Tad Cook, KT7H
Seattle, WA June 10, 1994
To all radio amateurs

SB PROP ARL ARLP023
ARLP023 Propagation de KT7H

Solar activity finally increased a bit after a period of zero
sunspots. Geomagnetic disturbances have begun to slack off, but
could increase again slightly this weekend. After that they are
expected to drop again, and then recurring coronal holes will
probably rotate into view and cause havoc around June 25, 26 and 27.

Probably the best period this month will be around June 17 when
solar flux is expected to be the highest and geomagnetic conditions
are predicted to be very quiet. Flux values are expected to inch up
to a peak of only 85 around mid month, and then slide back again.

Sunspot Numbers from June 2 through 8 were 0, 0, 0, 0, 14, 39 and
62, with a mean of 16.4. 10.7 cm flux was 67.9, 68.3, 67.6, 68.3,
70.6, 77.1 and 80.4, with a mean of 71.5.

This week's path projection is from Atlanta, Georgia to Gibraltar.

80 meters should be open from 0030 to 0530z, with the band peaking
around 0200. 40 meters should be good from 2330 to 0630, with
the peak period from 0100 to 0500. Check 30 meters from 2200 to
0730, and 20 meters from 1900 to 0400. 17 meters may be open on
some days from 1700 to 0600, and 15 meters around 0230. 12 and
10 meters do not look good at this time.

Why are you taking your 2-meter HT if you do not have a reciprocal
license? It's looking for problems at customs if you don't have the
appropriate paperwork if they ask.

>for. Listening to satellites while mobile?

I agree with what Brent said. I own two of them. I find they are lacking for mobile use because they do not have a high powered audio amp which is necessary to overcome the high ambient noise environment of a moving car.

I use mine for satellite work at home and also for scanning a limited number of police freqs. I have no complaints regarding the performance of the unit. I do wish they would have programmed the unit a bit differently to make it a bit friendlier to use. But they work very well as a comm receiver. They work OK as a scanner.

In a pinch they will do OK on shortwave, but have no SSB and if you decide to mod it to add SSB, be advised that you need to provide some means to tune it to a finer resolution than 1KHz (pull the local oscillator a bit?) in order to get acceptable results (remember that maritime stations can be on 0.5KHz boundaries).

Another quirk is the lack of a line level output (useful for taping or RTTY, not that RTTY matters since there is no BFO!).

But it is a good comm receiver for sure.

Landline BBS Open to All: 916-262-1657
RACESBUL.329 RELEASE DATE: June 6, 1994

Subject: OPS- Declared & Undeclared Emergencies

Question: Is a "declared emergency" required for the RACES to be activated?

Answer: "No, that is one of the myths about RACES, and it is NOT true.

The "declared emergency concept" is a fifty-year old hold-over of the long-gone idea that the RACES was to be a special service in which Amateurs would operate in wartime, hence a "declaration" by the president. One has only to read Section 97 to realize that was its genesis.

Today, the understanding and use of the RACES is quite different. It is NOT necessary that there be a declaration of an emergency in order to activate the RACES. It is activated in countless emergencies without a declaration having proceeded that activation. All it takes is authorization by the person named in the RACES plan for that purpose. A simple "can you call in some of the RACES people" is all it takes.

A declaration, when and if utilized, is to invoke laws such as those that provide access to state or federal funds. If there is no need for that declaration, the agency responds anyway, and so can the RACES. In fact, there are emergency management agencies that activate their RACES the moment they activate any other staff personnel; even in a potential emergency, such as a hazmat spill of unknown materials. Nonetheless, there are still those who carry this idea firmly entrenched in their minds as the result of misinformation in various publications, so the situation warrants review.

From time to time we see this statement: "Once the emergency is recognized by a state or federal agency it becomes a "declared emergency". That is false, as it implies that the local jurisdiction has no control, when in fact it is the local jurisdiction that may first declare the emergency in order to gain outside help. Further, the recognition of an emergency is not in and of itself a declaration. A declaration is a proclamation for certain legal purposes, not activation of the RACES. It is important to realize that a declared emergency may NOT invoke the call-out of a RACES unit any more than a non-declared emergency. NEED determines call-out, not "declaration".

RELEASE DATE: June 13, 1994

RACESBUL.330 MGT - RACES Activation

Question: How is the RACES unit activated?

That's a good question. What is an activation? Is it a "callout" enmasse? Does it mean "all or nothing"? Is it a fifty year old idea of passing traffic by the basket-full? Or, could it be different in today's world?

It could be that the idea of "all or nothing" comes from the call-out tree as used by emergency communications units. That is where the Radio Officer calls one to three key persons who then call 3 to 5 people, who then call three to five people, etc. That process works well; but it can imply a full scale callout to those unaware that scheduling of shifts begins as soon as a need is apparent.

Activation varies in practice. Furthermore, "activation" may not be just for radio operations but for other tasks, such as management, computer, phone or Public Safety system support, equipment delivery or installation.

State OES headquarters has an alert code of colors to signify different states of "alertness" or "activation" from an operations standpoint. Green means situation normal; yellow means a watch condition exists for the radio room and/or the personnel; orange means staffed with minimum duty personnel; red means staffed for a major incident and personnel should check in on a special phone line with their availability status. Our callout is always selective; that is, the talents, skills and experiences needed vary from incident to incident. We select from our roster

database those most likely to fit the need, and then proceed to setup schedules from the responses. Only in a major disaster does a limited group report to the HQ facility without callout. At State OES it can range from "we need help over here" to a written request to the program coordinator or the chief radio officer.

How it works elsewhere depends on who has the authority to activate, and the degree of trust that exists between the people involved. In new units it can be very formal. In units where the people have worked closely, it can be very informal. To government emergency management agency staff, activation of an EOC is turning on the lights and calling in the people. For RACES, it will vary with the jurisdiction and the people involved.

One good thing about the waiting period is it forces people to listen for a while before making their contribution, like "lurking" on the internet. This way you know the procedures, courtesies, etc. when you get on the air.

> as open ones by the coordinating body, without regard to their open/closed
> status?

The FCC doesn't recognize an "open" and "closed" status. To the FCC all
repeaters are "closed". The trustee has the ultimate right to determine who
can and cannot access his/her repeater.

> Just because something is discriminatory doesn't mean it's illegal, otherwise

I seem to recall a lawsuit a few years ago brought on behalf of a
retarded person being denied work at a restaurant (cleaning dishes or
taking out the garbage, from what I recall) because he was too stupid....

> The question that this brings up is this: Could a coordinating body give
> preference to open repeaters over closed ones if they wanted to? over
> *existing* closed ones? (The answer to the question "Do they actually do
> this?" apparently seems to be "No".)

Could they? Absolutely. If they're willing to back up their decisions
financially.

: to get around the effects of the tower.

Could you be a little more specific as to the problems you have
experianced at the top of the tower? Sometimes the loss of your feedline
is a critical factor in determining your system performance.

Let us know height of tower.
let us know type of feed line and loss per hundred feet at your frequency.

: Questions:
: Anyone have experience doing this?

Look at your tower or a commercial tower nearby. What are the other folks
doing? Unless the tower is quite large like a microwave tower you can use
the tower to enhanse a single antenna by using the tower as a director.

: What method did you use stacked, oppsite sides?

Most commercial antenna catalogues will show the patterns created by the
various mounting arrangements. Our repeater uses panel antennas aimed
north and east. There is a considerable loss of signal in the direction
of the south west. We don't mind as that area is the Pacific Ocean with
vary few users ;) The pattern is heart shaped and covers the bay area
quite well.

: How would you construct the phasing lines?

Look in the catalogues for stacked beams. You need to find a two way power
divider. This device splits the signal evenly between both antennas while
maintaining the correct impeadance.

Remember you are buying a pattern when you choose your antenna system. An
Omni pattern is not always a desired effect. We choose to send our
signals over the user areas not the Ocean. Why waste half your power in a
area no one uses.

: Hundreds of mhz? Well, maybe around 100.

Don't know what your source is, but the US amateurs in ITU region 2 have access to 275 MHz in the 5.8 GHz band alone, and another 750 MHz in the 10 and 24 GHz bands. These allocations are valuable - just ask any business or government agency that operates their own network on similar frequencies.

You're right. I misread your posting. I was under the impression you
were referring to bands which are used by a significant number of
amateurs.

We are having some debate in the club about the best base station verticals
for 2m/440.

If you have a vote to cast one way or the other in the following categories:

$50-100 100-150 150-200 200-250 250 and up

we would love to hear it.

Tnx Bob

>I totally agree. A marine radio is a piece of safety equipment, not a luxury
>item. This will either cause bootleg operations, or fewer boats to have
>radios.
>Brett Miller N7OLQ brett_miller@ccm.hf.intel.com

ah yes, but a boat is itself a luxury item. and it does appear from listening in that there are a quantity of boaters that could use some training in communications procedures (such as calling the bridges on the "alternate" frequency instead of doing EVERYTHING on 16...the bridge tenders have a 2nd frequency [marked with large letters on big signs readable from far away] so it's possible to call bridge tender #1 on alt frequency 1 if the "primary" is in use and get the bridge opened....instead of trying to conflict with other traffic on the channel - like the guy parking his boat that didn't follow the frequency change instructions of the marina...)

}If kicking in a pittance every year (and, face it, genetlpersons, $7
}per annum is NOT a huge sum of money .. less than 2 cents per day;

"back when" 22 years ago it was $9 per application.

}How many licensed hams are there in the US now? 200,000 maybe? At $7
}per ham per year, we're paying merely $1,400,000 p.a. rent on a LOT of
}real estate...

i think the right numbers are around 700k in the US over all, maybe 250k to 350k "active" and probably about 50-100k deceased/lost interest and not off the rolls until the license expires and the grace period runs out...

did anyone ever hear if the renewals are showing up or not at the FCC? there were some predictions but i haven't seen anything on the number of people due to renew that haven't filed yet.

}I'm vaguely upset that for administrative reasons they chose to charge
}the ten years in advance. I can imagine a young ham having some
}difficulty scraping up that money, but if you are like me, or most of

$70 is only about 5 compact discs or 1 pair of "designer" sneakers. the kids seem to have money to spend on that...it's all a matter of priorities. and that's only if you want a vanity call. $6 for an exam is even less of a deal for many...

Dear YLs, XYLs, OMs es SWLs,

I'm proude to announce a new ftp-server only for ham-radio stuff and
software. This new server runs on a machine from the Clubstation of
the Technical University of Berlin, DK0TU (AFUTUB). It may be reached
via ftp by 'afutub.extern.tu-berlin.de' [130.149.130.138]. For users
not having access to direct InterNet, a mailserver is also available
on afutub. Send e-mail to 'mailserver@afutub.extern.tu-berlin.de' and
**** Please enter a blank line to continue, anything else to halt output
a mail-body of

BEGIN
send help
END

to get the Net, a mailserver is also available
on afutub. Send e-mail to 'mailserver@afutub.extern.tu-berlin.de' and
a mail-body of

BEGIN
send help
END

to get the general helpfile from the server. You may feel free to
put new ham-radio softwre or files to /incoming via direct ftp access.

For further information or in case of problems, ideas, critics etc
contact 'root@afutub.extern.tu-berlin.de' or DL7AUC @ DB0BLO.DEU.EU

Regards es 73s,

Pat, DL7AUC, System Administrator, root@afutub.extern.tu-berlin.de
